Introduction

Forestry Statistics is a compilation of statistics on woodland, forestry and primary wood processing in the UK.

Where possible, statistical information in this publication covers the whole of the United Kingdom, and is broken down to give figures for England, Wales, Scotland and Northern Ireland. We would like to acknowledge the contribution of the Welsh Government, Natural Resources Wales and Northern Ireland's Forest Service in providing a wide range of statistics for this publication, which has made it possible to have more comprehensive coverage of the UK. However, there are some topics for which data are currently only available for some parts of the UK, and these tables are labelled accordingly.

The tables within each chapter (including data for charts), along with longer time series (in Excel and PDF formats), are available to download from the Statistics Data Downloads page at <https://www.forestryresearch.gov.uk/tools-and-resources/statistics/data-downloads/>. Further information on data sources and methodology are provided in the Sources chapter.

Selected statistics from this publication are provided in "Forestry Facts and Figures 2018", available at <https://www.forestryresearch.gov.uk/tools-and-resources/statistics/forestry-statistics/>.

The Forestry Commission also publishes a range of other Official Statistics, available at www.forestryresearch.gov.uk/statistics/.

A National Statistics publication

The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

Designation can be broadly interpreted to mean that the statistics:

- meet identified user needs;
- are well explained and readily accessible;
- are produced according to sound methods, and
- are managed impartially and objectively in the public interest.

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.

For more information about National Statistics and the UK Statistics Authority visit: www.statisticsauthority.gov.uk.

Forestry Commission's statistical release practices

The Forestry Commission aims to release statistics as soon as they are available. All of our National Statistics and other Official Statistics publications are available on our website www.forestryresearch.gov.uk/statistics/. Release dates are published on our website for the year ahead. Publications are made available at 9.30 am on the day of release.

Forestry Commission's statistical revisions policy

Revisions to statistics can occur when further data become available or errors are corrected. The Forestry Commission will normally revise statistics when the figures next appear in any publication. However, if the revision is significant (i.e. resulting in a major change to the published figures), a note showing the revisions will be published as soon as possible on the Forestry Commission website and distributed to all known recipients. In addition, the web versions of any current publications affected will be revised. See our full revisions policy at www.forestryresearch.gov.uk/documents/4355/FCrevisions.pdf for further information.

Quality

Summary information on quality is available in the Sources chapter of this publication. More details are provided in quality reports for individual topics, available at www.forestryresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

Release date: 27 September 2018

Coverage: United Kingdom

Geographical breakdown: Country (where possible)

Chapter 1: Woodland Areas and Planting

Introduction

This chapter contains statistics on:

- UK woodland area;
- certified woodland area;
- areas of new planting and restocking; and
- felling.

Estimates for England, Wales, Scotland and Northern Ireland are included in addition to UK totals. International comparisons are provided in the International Forestry chapter. Further information on the data sources and methodology used to compile the figures is provided in the Sources chapter.

Figures on woodland area and certified woodland area at March 2018 and on new planting and restocking for the period 2017-18 were previously published in "Woodland Area, Planting and Publicly Funded Restocking: 2018 edition", released on 14 June 2018. Some figures for previous years have been revised from those previously published. For further details on revisions, see the Woodland Areas and Planting section of the Sources chapter.

A copy of all woodland area and planting tables is available to download as an Excel spreadsheet from the Tables for Download page. Longer time series are also available for some tables. These can be accessed from our Woodland Area and Planting Statistics web page at <https://www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/woodland-statistics/>.

Key findings

The main findings are:

- The area of woodland in the UK at 31 March 2018 is estimated to be 3.17 million hectares. This represents 13% of the total land area in the UK, 10% in England, 15% in Wales, 19% in Scotland and 8% in Northern Ireland.
- Of the total UK woodland area, 0.86 million hectares (27%) is owned or managed by the Forestry Commission (in England and Scotland), Natural Resources Wales (in Wales) or the Forest Service (in Northern Ireland).
- The total certified woodland area in the UK at 31 March 2018 is 1.38 million hectares, including all Forestry Commission/Natural Resources Wales/Forest Service woodland. Overall, 43% of the UK woodland area is certified.
- Nine thousand hectares of new woodland were created in the UK in 2017-18, with conifers accounting for over one half (56%) of this area.
- A total of 281 sites were served with a Statutory Plant Health Notice in 2017-18, requiring a total of 1.7 thousand hectares of woodland to be felled. (This excludes areas felled within the *Phytophthora ramorum* management zone in south west Scotland, where a Statutory Plant Health Notice is not required).

1.1 Woodland Area

Woodland is defined in UK forestry statistics as land under stands of trees with a canopy cover of at least 20% (25% in Northern Ireland), or having the potential to achieve this. The definition relates to land use, rather than land cover, so integral open space and felled areas that are awaiting restocking are included as woodland. Further information, including how this UK definition compares with the international definition of woodland, is provided in the Sources chapter.

Statistics on woodland area are used to inform government policy and resource allocation, to provide context to UK forestry and land management issues and are reported to international organisations. They are also used in the compilation of natural capital accounts.

Increases in woodland area result from the creation of new woodland. This can be achieved through new planting or by natural colonisation of trees on land near existing woodland. Further information is available in the section on New Planting.

Decreases in woodland area result from the conversion of woodland to other land uses. Regulatory approval is usually required before trees can be felled. Felling approval will normally require the area to be restocked, but there are some cases in which trees may be permanently removed, generally for environmental reasons. The permanent removal of trees may also be authorised under planning regulations, to enable development.

Most public sector woodland is owned and managed by the Forestry Commission (FC) in England and Scotland, Natural Resources Wales (NRW) in Wales and the Forest Service (FS) in Northern Ireland. Other public sector woodland (e.g. owned by local authorities) is included with privately owned woodland as “private sector” in this release.

The Natural Resources Wales woodland areas and land areas shown in this release relate to areas previously owned or managed by Forestry Commission Wales. They exclude any areas previously owned or managed by other parts of Natural Resources Wales, such as the former Environment Agency in Wales and the former Countryside Council for Wales.

1.1.1 Area of Woodland: 2018

The area of woodland in the UK at 31 March 2018 is estimated to be 3.17 million hectares (Table 1.1). Of this total, 1.4 million hectares (46%) is in Scotland, 1.3 million hectares (41%) is in England, 0.3 million hectares (10%) is in Wales and 0.1 million hectares (4%) is in Northern Ireland.

Conifers account for around one half (51%) of the UK woodland area, although this proportion varies from around one quarter (26%) in England to around three quarters (74%) in Scotland.

Table 1.1 Area of woodland by ownership & forest type at 31 March 2018

Source: Forestry Commission, Natural Resources Wales, Forest Service, National Forest Inventory.

Notes:

1. FC: Forestry Commission (England and Scotland), NRW: Natural Resources Wales, FS: Forest Service (Northern Ireland). NRW estimates only relate to woodland formerly owned/managed by FC Wales.
2. Private sector: all other woodland. Includes woodland previously owned/managed by the Countryside Council for Wales and the Environment Agency in Wales, other publicly owned woodland (e.g. owned by local authorities), woodland owned by non-government organisations (e.g. Woodland Trust) and privately owned woodland.
3. Figures for England, Wales and Scotland are based on data obtained from the National Forest Inventory (NFI) and adjusted for new planting, but at present no adjustment is made for woodland recently converted to another land use. Further information on how the figures have been estimated is available in the Sources chapter.
4. Figures for Northern Ireland are obtained from the Northern Ireland Woodland Register.
5. Broadleaves include coppice and coppice with standards.

1.1.2 Area of woodland: changes over time

The 3.17 million hectares of woodland in the UK in 2018 represents 13% of the total land area. This comprises 10% in England, 15% in Wales, 19% in Scotland and 8% in Northern Ireland (Table 1.2).

Table 1.2 Woodland area in the United Kingdom

Year	England		Wales		Scotland		Northern Ireland		UK

Source: Forestry Commission, Natural Resources Wales, Forest Service, National Forest Inventory.

Notes:

1. Percentage of the total surface area excluding inland water. The total surface areas, excluding inland water, are taken from the UK Standard Area Measurements (published by the Office for National Statistics).

2. Estimates for England and Scotland before 1905 come from a variety of sources, including the Domesday Survey of England, Scottish Woodland History (TC Smout ed, 1997) and Roy maps c1750.

3. For Northern Ireland, 17th century figure is estimate for all Ireland, 1905 figure is estimate for Ulster 1908, 1947 figure assumes no change from 1939-40 Census.

4. 1998 figures shown for England, Wales and Scotland have been revised from those originally published to produce estimates that are consistent with subsequent data from the National Forest Inventory.

5. Figures for England, Wales and Scotland are based on data obtained from the National Forest Inventory (NFI) and adjusted for new planting, but at present no adjustment is made for woodland recently converted to another land use. Further information on how the figures have been estimated is available in the Sources chapter.

6. Figures for Northern Ireland are obtained from the Northern Ireland Woodland Register.

.. Denotes data not available.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

Figure 1.1 shows woodland area by country since 1998. Figures for 1998 to 2009 for England, Wales and Scotland have been revised from those initially published, to produce results that are consistent with the National Forest Inventory and enable comparisons over time. A breakdown of this revision process is outlined in section 11.1.1: Woodland area in the Sources chapter.

The chart indicates that the UK woodland area has risen by around 250 thousand hectares since 1998, an increase of 9% over the period.

Figure 1.1 Area of woodland, 1998-2018

Source: Forestry Commission, Natural Resources Wales, Forest Service, National Forest Inventory.

Notes:

1. Woodland areas for England, Wales and Scotland shown in this figure are based on data from the National Forest Inventory. The trends shown take account of areas of new planting and identifiable permanent woodland loss. Areas of woodland loss that are not yet identifiable (e.g. conversion of woodland for the restoration of open habitats) are not accounted for. Further information on the National Forest Inventory is available at <https://www.forestresearch.gov.uk/tools-and-resources/national-forest-inventory/>.

1.1.3 Woodland area by ownership

The Forestry Commission, Natural Resources Wales and the Forest Service owned or managed 27% of the total woodland area in the UK in 2018 (Table 1.3). This proportion ranged from 16% of the woodland area in England to 55% in Northern Ireland.

Table 1.3 Area of woodland in the UK by ownership, 2014-2018

Year	England		Wales		Scotland		Northern Ireland		UK	
	Area (000 ha)	% ¹	Area (000 ha)	% ¹	Area (000 ha)	% ¹	Area (000 ha)	% ¹	Area (000 ha)	% ¹

Source: Forestry Commission, Natural Resources Wales, Forest Service, National Forest Inventory.

Notes:

1. FC: Forestry Commission (England and Scotland), NRW: Natural Resources Wales, FS: Forest Service (Northern Ireland). NRW estimates only relate to woodland formerly owned/managed by FC Wales.
2. Private sector: all other woodland. Includes woodland previously owned/managed by the Countryside Council for Wales and the Environment Agency in Wales, other publicly owned woodland (e.g. owned by local authorities) and privately owned woodland.
3. Figures for England, Wales and Scotland are based on data obtained from the National Forest Inventory (NFI) and adjusted for new planting, but at present no adjustment is made for woodland recently converted to another land use. Further information on how the figures have been estimated is available in the Sources chapter.
4. Northern Ireland figures are obtained from the Northern Ireland Woodland Register.
5. Areas as at 31 March.

1.2 Certified woodland area

Certified woodland in the UK has been independently audited against the UK Woodland Assurance Standard. Forestry certification schemes are owned by international non-governmental organisations and exist to promote good forest practice. They offer product labels to demonstrate that wood or wood products come from well-managed forests.

Figures for certified woodland areas are often used as an indicator of sustainable forest management. However, it should be noted that woodland that is not certified may also be managed sustainably.

Most changes to the certified woodland area figures over time are a result of new areas being certified or certificates not being renewed upon expiry. Temporary changes can also occur if there is a time lag between expiry and renewal.

1.38 million hectares of woodland in the UK were certified in March 2018 (Table 1.4). This represented 43% of the total UK woodland area, 25% in England, 47% in Wales, 58% in Scotland and 58% in Northern Ireland.

Table 1.4 Woodland area certified, March 2018

Ownership	England	Wales	Scotland	Northern Ireland	UK
	thousand hectares				
FC/NRW/FS woodland ¹	214	117	470	62	864
Private sector woodland ²	118	28	363	3	512
Total woodland area certified	332	145	833	65	1 376

Source: Forest Stewardship Council, Forestry Commission, Natural Resources Wales, Forest Service, National Forest Inventory.

Notes:

1. FC: Forestry Commission (England and Scotland), NRW: Natural Resources Wales, FS: Forest Service (Northern Ireland). NRW estimates only relate to woodland formerly owned/managed by FC Wales.
2. Private sector: all other woodland. Includes woodland previously owned/managed by the Countryside Council for Wales and the Environment Agency in Wales, other publicly owned woodland (e.g. owned by local authorities) and privately owned woodland.
3. All certified woodland in 2018 is certified under the Forest Stewardship Council (FSC) scheme. Some of these woodlands are also certified under the Programme for the Endorsement of Forest Certification (PEFC) scheme.
4. The estimates are based on UK data published by FSC, supplemented by data from individual certificates and other sources. Where possible, figures are for the woodland area certified, rather than the land area certified.
5. All FC/NRW/FS woodland is certified. The FC/NRW/FS areas are the latest areas, as shown in Table 1.1, rather than the areas shown on the certificates.

Data: Longer time series of the above table are available from the [Data Downloads](#) webpage.

Figure 1.2 presents certified woodland area by country since December 2001, with figures for earlier years revised for consistency with results from the National Forest Inventory. This shows that area of woodland certified has decreased by 1% between March 2017 and March 2018, but is (30%) higher than at December 2001.

Figure 1.2 Area of certified woodland, 2001-2018

Source: Forest Stewardship Council, Forestry Commission, Natural Resources Wales, Forest Service.

Notes:

1. All certified woodland is certified under the Forest Stewardship Council (FSC) scheme. Some of these woodlands are also certified under the Programme for the Endorsement of Forest Certification (PEFC) scheme.
2. The estimates are based on UK data published by FSC, supplemented by data from individual certificates and other sources. Where possible, figures are for the woodland area certified, rather than the land area certified.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

1.3 Land use

Not all land that is owned or managed by the Forestry Commission, Natural Resources Wales or the Forest Service in Northern Ireland is woodland; other land uses include agricultural land, mountain areas and moorland.

The woodland areas and land areas shown for Natural Resources Wales relate to areas previously owned or managed by Forestry Commission Wales. They exclude any areas previously owned or managed by other parts of Natural Resources Wales, such as the former Environment Agency Wales and the former Countryside Council for Wales.

Woodland accounted for 79% of all Forestry Commission/Natural Resources Wales/Forest Service land in the UK at 31 March 2018 (Table 1.5). This proportion was highest in Wales (95%) and lowest in Scotland (74%).

Notes:

1. FC: Forestry Commission (England and Scotland), NRW: Natural Resources Wales, FS: Forest Service (Northern Ireland). NRW estimates only relate to woodland formerly owned/managed by FC Wales.

2. "Other land" includes agricultural land and areas of moorland and mountain.

3. Areas as at 31 March.

1.4 National Forest Inventory

This section contains interim results from the National Forest Inventory (NFI). The statistics are based on field survey data combined with information from the NFI woodland map, which is a spatial representation of woodland areas in Great Britain.

The first cycle of the NFI field survey began in 2010 and was completed in 2015. Analysis is ongoing and therefore full field survey results from the NFI are not yet available. Figures presented in this chapter are interim estimates at 31 March 2012, published in the NFI "50-year forecast of softwood timber availability" and "50-year forecast of hardwood timber availability" reports, released in April 2014. Both reports are available at www.forestresearch.gov.uk/tools-and-resources/national-forest-inventory/.

The figures presented in Tables 1.6 to 1.9 (and Figures 1.3, 1.4a and 1.4b) relate to stocked areas. These differ from the woodland areas presented in earlier tables, as stocked areas exclude felled areas and (for non-FC land) areas of integral open space.

The figures on growing stock presented in Tables 1.10 and 1.11 form the basis for the Forestry Commission's availability forecasts (see Tables 2.4a and 2.4b).

Further information on the National Forest Inventory is available at www.forestresearch.gov.uk/tools-and-resources/national-forest-inventory/.

1.4.1 Woodland area by age: conifers

Table 1.6 presents the area of conifers, broken down by age class, ownership and country.

Sixty-one percent of the coniferous woodland area in Great Britain was occupied by stands of 40 years old or younger (Table 1.6). A further 9% of stands were aged over 60 years.

Table 1.6 Stocked woodland area in GB by ownership and age class: Conifers

Notes:

1. FC: Forestry Commission (England and Scotland), NRW: Natural Resources Wales. NRW estimates only relate to woodland formerly owned/managed by FC Wales.
2. Private sector: all other woodland. Includes woodland previously owned/managed by the Countryside Council for Wales and the Environment Agency in Wales, other publicly owned woodland (e.g. owned by local authorities) and privately owned woodland.
3. Stocked area only: excludes felled areas and (for private sector land) open space.
4. Areas at 31 March 2012.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

1.4.2 Woodland area by age: broadleaves

Table 1.7 presents the area of broadleaves, broken down by age class, ownership and country.

Around one half (53%) of the broadleaved area was occupied by stands of 40 years old or younger (Table 1.7). More than one quarter (28%) of stands were aged over 60 years.

1.4.3 Woodland area by age: Summary

Figure 1.3 presents the age profile of woodland in Great Britain for conifers and for broadleaves. It shows that broadleaves are more evenly distributed across the age classes than conifers.

Figure 1.3 Age profile of woodland in GB

2. Areas at 31 March 2012.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

1.4.4 Woodland area by species: conifers

Table 1.8 presents the area of conifers, broken down by principal species, ownership and country.

Sitka spruce accounts for around one half (51%) of the conifer area in Great Britain (Table 1.8), followed by Scots pine (17%) and Larches (10%). Sitka spruce is less dominant in England, accounting for just one quarter (26%) of the conifer area there.

1.4.5 Woodland area by species: broadleaves

Table 1.9 presents the area of broadleaves, broken down by principal species, ownership and country.

The most commonly occurring broadleaved species in Great Britain are Birch (accounting for 18% of broadleaf woodland), Oak (16%) and Ash (12%) (Table 1.9). Birch is more dominant in Scotland, accounting for 43% of the broadleaf area there.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

1.4.7 Growing stock by species: conifers

Growing stock is the volume of timber in living trees. It is also often referred to as the standing volume.

Table 1.10 presents the volume of coniferous growing stock, broken down by principal species, ownership and country.

The total volume of coniferous growing stock in Great Britain in 2012 was 355 million m³ overbark standing (Table 1.10).

Sitka spruce accounted for around one half (51%) of the conifer growing stock, followed by Scots pine (15%) and Larches (10%). This largely reflects the distribution of species by area (see Table 1.8).

1.4.8 Growing stock by species: broadleaves

Table 1.11 presents the volume of broadleaved growing stock, broken down by principal species, ownership and country.

The total volume of broadleaved growing stock in Great Britain in 2012 was 245 million m³ overbark standing (Table 1.11).

Oak (28%), Ash (16%) and Beech (12%) accounted for the majority of the broadleaved volume. To some extent, this reflects the distribution of species by area (see Table 1.9).

Table 1.11 Growing stock in GB by ownership and principal species: Broadleaves

1.5 Area of Farm Woodland

Agricultural Censuses run by Defra (Department for Environment, Food and Rural Affairs) and the devolved administrations collect annual information on the land-use of farms. Table 1.12 below shows the area of woodland on farms.

The area of farm woodland in the UK has increased from 705 thousand hectares in 2008 to 1037 thousand hectares in 2017 (Table 1.12). Slightly over one half (54%) of all farm woodland was in Scotland in 2017, with a further 36% in England, 9% in Wales and the remaining 2% in Northern Ireland.

Table 1.12 Area of farm woodland, 2008-2017

Year	England	Wales	Scotland	Northern Ireland	UK
	thousand hectares

1.6 New planting and publicly funded restocking

New planting

New planting is the creation of new areas of woodland by planting trees on land that was not previously woodland. The statistics presented here also include new woodland that is created by natural colonisation of trees on land near existing woodland. Statistics on new planting are used to inform government policy and resource allocation, and are used in producing annual estimates of woodland area.

There are a number of factors that can affect the level of new planting in the UK. These include:

- choices by landowners reflecting their own motivation and needs;
- the costs and availability of land for conversion to woodland;
- the availability of grants for new planting, the level of grant payments available and the awareness of grants among potential recipients;
- the tax benefits available from owning woodland;
- expected future markets for wood products such as timber and woodfuel;
- income from payments for ecosystem services, particularly carbon storage;
- national and local initiatives, for example on biodiversity, green infrastructure and water management.

Restocking

Restocking is the replacement of trees on areas of woodland that have been felled; this can be done either through replanting or natural regeneration. The statistics presented here include felled areas that have been restocked by both natural regeneration and replanting.

As restocking takes place on woodland that has been previously harvested and it is a condition of most felling licences that the area is restocked, restocking rates are mainly driven by harvesting levels (with a time lag, usually of around 2 years, between harvesting and restocking). Figures for timber harvesting (wood production) are available in the UK-Grown Timber chapter.

Economic factors, including grant rates, may have some effect on the species choice at restocking. In addition, the precise timing of restocking may be affected by weather conditions.

The figures presented here relate to restocking that took place on woodland that is owned or managed by the Forestry Commission, Natural Resources Wales and the Forest Service, and restocking that took place on private sector land with public funding.

Grant support for restocking of conifers has changed with the introduction of Rural Development Contracts in Scotland in 2008. As a result, grant aid was no longer available for restocking with Sitka spruce in many cases. No estimate has been included for restocking of Sitka spruce in Scotland that is no longer supported by grants. It is therefore likely that conifer restocking in Scotland in recent years is under-reported in this release and other statistics. A new Forestry Grant Scheme was launched in Scotland in March 2015.

Grant support in England is now provided by the Countryside Stewardship scheme, which opened for applications in early 2016. No funding is provided for restocking under Countryside Stewardship. No estimate has been made for restocking in England that is no longer supported by grants and it is therefore likely that restocking in England is under-reported in this release.

1.6.1 New planting and restocking by forest type

Nine thousand hectares of new woodland were created in the UK in 2017-18. In addition, 14 thousand hectares of woodland restocking were reported (Table 1.13). Conifers accounted for over one half (56%) of the new planting area and 81% of the reported restocking area in 2017-18.

Notes:

1. Private sector figures are based on areas for which grants were paid during the year and, for England, includes new planting supported by The Woodland Trust, by Natural England and by the Environment Agency, and land acquired by the National Forest Company. Figures for grant-aided planting under Rural Development Contracts in Scotland relate to calendar years.
2. A small amount of new planting without grant aid in Scotland in 2016-17 has been included. No other estimates of areas planted without grant aid are included. As a result, the reported figures are likely to underestimate the true level of planting activity. Restocking figures cover restocking that took place on FC/NRW/FS land, and restocking that took place on private sector land with public funding.
3. The planting season lies both sides of 31 March, and the weather can cause planting to be advanced or delayed.
4. Includes natural colonisation and natural regeneration.
5. Restocking by natural regeneration in non-clearfell areas may be under-represented in the above table.
6. 2017-18 publicly funded restocking grants in England are limited to FE woodlands and private woodlands where landowners applied for grants to assist the restocking of stands felled due to tree health issues (e.g. Phytophthora in Larch and Chalara in Ash).

Data: Longer time series of the above table are available from the [Woodland Statistics](#) web page.

1.6.2 New planting and restocking by ownership

In 2017-18 most new planting (90%) took place on private sector land (Table 1.14). In contrast, almost three quarters of reported restocking (71%) took place on FC/NRW/FS land.

Table 1.14 New planting & publicly funded restocking by ownership

Year (ending 31/3)	New Planting			Restocking			Total		
	FC/NRW/ FS	Private sector	Total	FC/NRW/ FS	Private sector	Total	FC/NRW/ FS	Private sector	Total

Source: Forestry Commission, Natural Resources Wales, Forest Service, grant schemes.

Notes:

1. Private sector figures are based on areas for which grants were paid during the year and, for England, includes new planting supported by The Woodland Trust, by Natural England and by the Environment Agency, and land acquired by the National Forest Company. Figures for grant-aided planting under Rural Development Contracts in Scotland relate to calendar years.
2. A small amount of new planting without grant aid in Scotland in 2016-17 has been included. No other estimates of areas planted without grant aid are included. As a result, the reported figures are likely to underestimate the true level of planting activity. Restocking figures cover restocking that took place on FC/NRW/FS land, and restocking that took place on private sector land with public funding.
3. The planting season lies both sides of 31 March, and the weather can cause planting to be advanced or delayed.
4. Includes natural colonisation and natural regeneration.
5. Restocking by natural regeneration in non-clearfell areas may be under-represented in the above table.
6. 2017-18 publicly funded restocking grants in England are limited to FE woodlands and private woodlands where landowners applied for grants to assist the restocking of stands felled due to tree health issues (e.g. Phytophthora in Larch and Chalara in Ash).

Data: Longer time series of the above table are available from the [Woodland Statistics](#) web page.

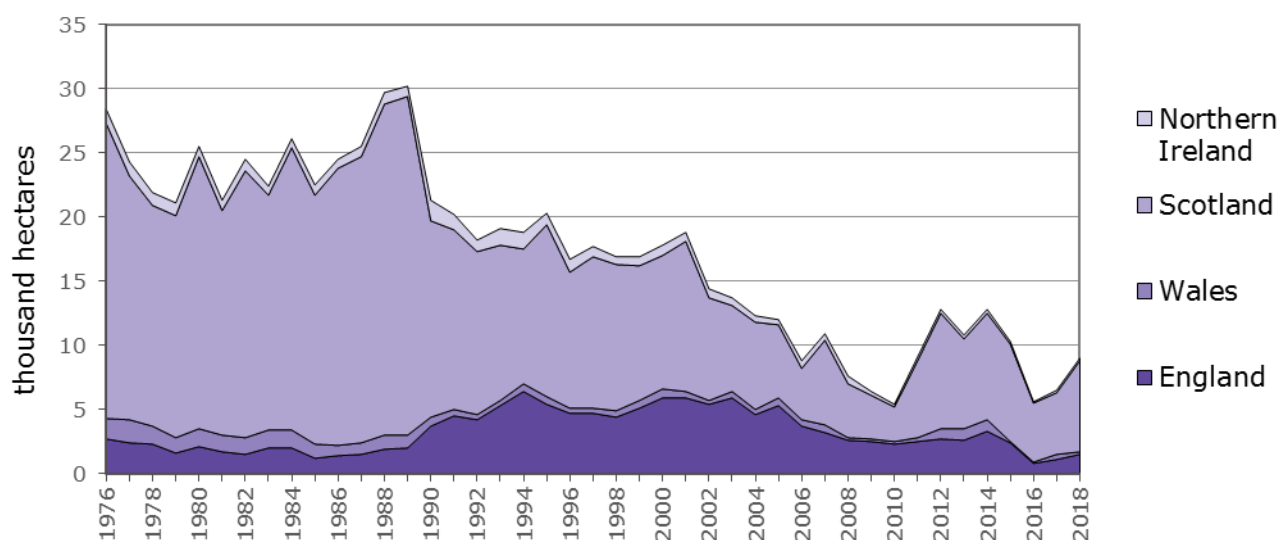

1.6.3 New planting and restocking: time series

Figure 1.6 shows areas of new planting by country since the year ending March 1976. UK new planting rates have fallen from the late 1980's, decreasing by 82% between 1988-89 and 2009-10. This followed changes to the tax benefits from owning forestry in the UK, introduced in the 1988 Finance Act (www.legislation.gov.uk/ukpga/1988/39/contents).

The area of new planting in the UK between 2010-11 and 2014-15 was around twice the level of that reported in 2009-10. This increase was largely driven by increases in Scotland following the introduction of Rural Development Contracts. New planting decreased in 2015-16 to levels similar to that reported in 2009-10. This decrease is likely to have been influenced by recent changes in grant schemes across the UK.

At 9.1 thousand hectares in 2017-18, the current level of new planting represents a 40% increase from the 6.5 thousand hectares achieved in 2016-17. For further information, see the New Planting and Restocking section of the Sources chapter.

Figure 1.6 New planting in the UK, 1976-2018

Source: Forestry Commission, Natural Resources Wales, Forest Service, grant schemes.

Notes:

1. Private sector figures are based on areas for which grants were paid during the year and, for England includes new planting supported by the Woodland Trust, by Natural England and by the Environment Agency, and land acquired by the National Forest Company. Figures for grant aided planting under Rural Development Contracts in Scotland relate to calendar years.
2. Estimate of areas planted without grant aid are also included (where possible) up to 2009-10. For Scotland, a small amount of new planting without grant aid was also included for 2016-17. As a result, the reported figures are likely to under-estimate the true level of planting activity.
3. The planting season lies both sides of 31 March, and the weather can cause planting to be advanced or delayed.
4. Includes woodland formed by natural colonisation.

Figure 1.7 shows areas of restocking by country since the year ending March 1976. It indicates an increase in restocking rates over most of the period. Over the same period, there has been a general increase in UK wood production (see UK-Grown Timber chapter).

The reported area of restocking fell significantly after a peak of 19 thousand hectares in 2006-07. This followed changes to grant support for restocking in Scotland, that resulted in some non-grant aided Sitka spruce restocking being excluded from the estimates. Results from the Forestry Commission's Nursery Survey (an annual survey of forest nurseries in Great Britain) indicate that, following a dip in the 2009/10 planting year, sales of Sitka spruce plants to Scotland have been increasing each year since 2011/12.

The chart shows that the reported area of publicly funded restocking in 2017-18 represents a 16% decrease from the previous year. For further information, see the New Planting and Restocking section of the Sources chapter.

Figure 1.7 Restocking in the UK, 1976-2018

Source: Forestry Commission, Natural Resources Wales, Forest Service, grant schemes.

Notes:

1. Private sector figures are based on areas for which grants were paid during the year. Figures for grant aided planting under Rural Development Contracts in Scotland relate to calendar years.
2. Estimate of areas planted without grant aid are also included (where possible) up to 2009-10, but no estimates are available since then. Figures from 2010-11 therefore only cover restocking that took place on FC/NRW/FS land and restocking that took place on private sector land with public funding. As a result, the reported figures are likely to under-estimate the true level of planting activity.
3. The planting season lies both sides of 31 March, and the weather can cause planting to be advanced or delayed.
4. Includes woodland restocked by natural regeneration.

1.7 Felling

Felling

Approval for the felling (cutting down) of trees in the UK is granted through felling licences issued by the Forestry Commission, Natural Resources Wales or the Forest Service.

Felling licences may be conditional (where felling approval is granted subject to replanting) or unconditional (where tree felling is approved without the requirement to replant). Unconditional licences are routinely issued for silvicultural thinning operations and in these cases no woodland loss takes place. However, an unconditional felling licence without the requirement to replant may be issued if there are overriding environmental considerations, for example to enable the restoration of important habitats.

The removal of trees may also be authorised under planning regulations, to enable development (including for windfarms). In this case, a felling licence is not required.

The removal of trees might also be required through a Statutory Plant Health Notice (SPHN). A SPHN may require the felling and destruction of infected trees or containment of infested material on site, and is issued by the Forestry Commission, Natural Resources Wales or the Forest Service to prevent the spread of pests and diseases. Similar actions are also required within the public woodland estate managed by these organisations. There is no legal requirement for woodland to be restocked after felling under a SPHN.

Since 2010/2011, SPHNs have mainly been issued to attempt to slow down the spread of *Phytophthora ramorum*, first found in the UK in 2002 on viburnum, and in 2009 on Japanese larch, a significant sporulating host resulting in a dramatic upsurge in the disease.

Statutory felling of infected *P. ramorum* infected larch does not apply within the designated *P. ramorum* management zone in south west Scotland where the high levels of infection and proportion of larch in the area make this unfeasible. However, felling licences are still required, and movement licences are required to stop spread out of this area. In Wales' *P. ramorum* Core Disease Zone SPHNs are still served to contain material on site, but felling still requires a felling licence.

Further information on felling and Statutory Plant Health Notices is provided in the Sources chapter.

Woodland loss

Information on unconditional felling licences that do not relate to thinning may be seen as an indication of the level of woodland loss on land that is not owned or managed by the Forestry Commission, Natural Resources Wales or the Forest Service. However, the data relates only to felling licences issued, so does not provide information on whether the felling actually took place (or the timing of the felling). In addition, felling licences do not cover woodland loss that is authorised under planning regulations.

The National Forest Inventory report "Preliminary estimates of the changes in canopy cover in British woodlands between 2006 and 2015" (August 2016) has reported:

- 3.3 thousand hectares of observed permanent woodland loss between 2006 and 2015;
- a further 0.7 thousand hectares of ground under development and 0.2 thousand hectares of newly established habitats;
- 69% of the clearfelled area observed in 2006 had been restocked by 2012, leaving around 33.9 thousand hectares of woodlands in transition and open areas;
- 63% of the area observed as clearfelled between 2006 and 2009 had been restocked by 2012, leaving around 28.6 thousand hectares of woodlands in transition and open areas.

These are interim estimates that are likely to underestimate the final position; updated estimates from NFI second cycle field survey are scheduled to be available by 2020.

Further information is available in the report at www.forestresearch.gov.uk/tools-and-resources/national-forest-inventory/.

1.7.1 Felling licences

Table 1.15 shows the area covered by unconditional felling licences issued by the Forestry Commission in England and Scotland in the last 10 years. The figures do not include unconditional felling licences issued to permit thinning of woodlands. The table covers woodland in England and Scotland that is not owned or managed by the Forestry Commission only; it does not cover felling that is exempt from felling licence approval (such as authorisations for felling under planning regulations, felling required under a Statutory Plant Health Notice or felling that is approved on condition that the area is restocked).

A total of 0.2 thousand hectares of woodland in England was covered by unconditional felling licences (with no requirement to restock) in the year to March 2018. The level in Wales and Scotland was under 50 hectares each.

Table 1.15 Area of private sector woodland covered by unconditional felling licences¹, 2008-09 to 2017-18

Year	England	Wales	Scotland	GB
				thousand hectares
2008-09	0.4	0.0	0.2	0.6
2009-10	0.5	0.0	0.2	0.7

2015-16	0.2	0.1	0.2	0.5
2016-17	0.2	0.0	0.0	0.2
2017-18	0.2	0.0	0.0	0.2

Source: Forestry Commission, Natural Resources Wales

Notes:

1. Felling licences issued in the period. Excludes areas exempt from felling licence approval or under Forestry Commission grant, and licences issued for thinning.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

1.7.2 Statutory Plant Health Notices

Table 1.16a shows the number of sites where a Statutory Plant Health Notice has been served in the UK since 2010-11 and Table 1.16b shows the area required to be felled under these Notices. The tables cover all woodland, including sites owned or managed by the Forestry Commission, Natural Resources Wales or the Forest Service. As Statutory Plant Health Notices are not issued in the Phytophthora ramorum management zone in south west Scotland, the figures presented here do not cover all felling of infected larch.

A total of 281 sites were served with Statutory Plant Health Notices between April 2017 and March 2018.

Table 1.16a Number of sites where a Statutory Plant Health Notice has been served¹, 2010-11 to 2017-18

Year	England	Wales	Scotland	Northern Ireland	UK
2010-11	114	46	1	10	171
2011-12	131	90	14	16	251
2012-13	168	89	123	15	395
2013-14	223	272	76	28	599
2014-15	138	71	9	17	235
2015-16	74	57	34	3	168
2016-17	76	53	71	0	200
2017-18	43	153	71	14	281

Source: Forestry Commission, Natural Resources Wales, Forest Service

Note:

1. The number of sites where infection of larch by *Phytophthora ramorum* has been confirmed, or where there is sufficient suspicion of infection, and a Statutory Plant Health Notice has been served on the landowner.
2. Excludes felling within the *Phytophthora ramorum* management zone in south west Scotland, where Statutory Plant Health Notices are not issued.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

Areas requiring felling under Statutory Plant Health Notices totalled 1.7 thousand hectares in 2017-18. Over three quarters (79%) of the area to be felled in 2017-18 was in Wales, 15% was in Scotland and 3% each in England and in Northern Ireland.

Table 1.16b Felling areas under Statutory Plant Health Notices¹, 2010-11 to 2017-18

Note:

1. The area that is required to be felled within the Statutory Plant Health Notice.
2. Excludes felling within the Phytophthora ramorum management zone in south west Scotland, where Statutory Plant Health Notices are not issued.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

Chapter 2: UK-Grown Timber

Introduction

This chapter covers the production of timber from woodland and the primary processing of harvested wood to give basic wood products.

Estimates for England, Wales, Scotland and Northern Ireland are included, in addition to UK totals, where possible.

International comparisons of timber production are available in the International Forestry chapter. Further information on the data sources and methodology used to compile the figures is provided in the Sources chapter.

Timber originating from conifers is known as softwood and that from broadleaves is known as hardwood. Please refer to the Glossary for a definition of other terms used in this chapter.

Figures for 2017 were previously published in "UK Wood Production and Trade: 2017 Provisional Figures", released on 17 May 2018. Some figures for the latest year have been revised from those previously published. For further details on revisions, see the Timber section of the Sources chapter.

A copy of all UK-grown timber tables is available to download as an Excel spreadsheet from www.forestresearch.gov.uk/tools-and-resources/statistics/data-downloads/.

Key findings

The main findings for 2017 are (with percentage changes from 2016):

Removals¹ (harvesting) of UK roundwood:

- 10.9 million green tonnes of softwood (+2%);
- 0.7 million green tonnes of hardwood (+24%)².

Deliveries¹ of UK roundwood to wood processors and others:

- Total: 11.2 million green tonnes of roundwood (softwood and hardwood) (+2%), of which:
- Sawmills: 6.6 million green tonnes (+1%);
- Wood-based panels: 1.1 million green tonnes (-15%);
- Integrated pulp and paper mills: 0.4 million green tonnes (+4%);
- Woodfuel: 2.2 million green tonnes (+13%)²;
- Other uses, including round fencing, shavings and exports of roundwood: 0.9 million green tonnes (+8%).

Production of wood products in the UK included:

- 3.8 million cubic metres of sawnwood (+3%);
- 3.2 million cubic metres of wood-based panels (+5%);
- 3.9 million tonnes of paper and paperboard (+5%).

¹ The difference between total removals and deliveries reported here (around 0.2 million green tonnes in 2017) is likely to reflect a number of factors, including the different data sources and methodologies used.

² The 24% increase in hardwood removals is largely attributed to an increase in the estimate for deliveries of UK grown hardwood used for woodfuel reported from 2016 to 2017 (see Table 2.6). Therefore, this new estimate should not be interpreted as an increase in a single year. This figure is currently under review.

2.1 Wood production

Wood production (also referred to as removals) refers to the harvesting of roundwood (trunk and branch wood) from coniferous (softwood) and non-coniferous (hardwood) trees. Figures are generally expressed here in green tonnes (weight when freshly felled).

Removals should not be confused with deliveries, which are the quantities of UK-grown roundwood that is delivered to processors (mills) or for other uses (such as woodfuel and exports). Deliveries statistics are presented in Tables 2.5 and 2.6. A comparison of removals and deliveries of UK softwood roundwood is provided in the Sources chapter.

The figures on removals of UK roundwood are used to monitor trends in the UK forest sector. The data is also used alongside figures for standing volume (the volume of standing trees) and increment (the growth rate of standing trees) to compile natural capital accounts for inclusion in the UK Environmental Accounts released by the Office for National Statistics.

The data are derived from a number of sources:

- FC/NRW/FS figures are obtained from Forestry Commission, Natural Resources Wales and Forest Service administrative systems;
- Private sector softwood figures are obtained from the Private Sector Softwood Removals Survey;
- Total hardwood figures are estimated from hardwood deliveries figures, which are compiled from surveys of the UK-grown timber industry, trade associations and expert estimates.

2.1.1 Summary: wood production

It is estimated that a total of 11.7 million green tonnes of roundwood was removed from UK woodlands in 2017.

Softwood accounted for most (94%) removals from UK woodland and totalled 10.9 million green tonnes in 2017 (Table 2.1). This represented a 2% increase on the previous year's figure.

Hardwood removals totalled 0.7 million green tonnes in 2017. This total includes a new estimate for deliveries of UK grown hardwood used for woodfuel (see Table 2.6) and should not be interpreted as an increase in a single year.

Private sector woodlands accounted for 55% of softwood production and 89% of hardwood production in 2017.

Table 2.1 Wood production, 2008-2017

Year	Softwood			Hardwood ³		
	FC/NRW/FS ¹ woodland	Private sector ² woodland	Total softwood	FC/NRW/FS ¹ woodland	Private sector ^{2, 4} woodland	Total hardwood
	thousand green tonnes

2017	4 862	6 053	10 915	83	655	738

Source: Forestry Commission, Natural Resources Wales, Forest Service, industry surveys, industry associations.

Notes:

1. FC: Forestry Commission (England, Scotland, and until March 2013, Wales), NRW: Natural Resources Wales (from April 2013), FS: Forest Service (Northern Ireland).

2. Private sector: removals from all other woodland (including some publicly owned woodland).

3. Most hardwood production in the UK comes from private sector woodland; the figures are estimates based on reported deliveries to wood processing industries and others.

4. The increase in hardwood removals from private sector woodland is largely attributed to the increase in the estimate for deliveries of UK grown hardwood used for woodfuel reported from 2016 to 2017 (see Table 2.6). Therefore, this new estimate should not be interpreted as an increase in a single year. This figure is currently under review.

Data: Longer time series of the above table, including estimates by country (England/ Wales/ Scotland/ Northern Ireland) are available from the Data downloads web page at:

<https://www.forestryresearch.gov.uk/tools-and-resources/statistics/data-downloads/>

2.1.2 Origin of private sector softwood removals

It is estimated that 71% of all softwood removals from private sector woodlands were harvested in Scotland, 16% in England, 13% in Wales and the remainder in Northern Ireland in 2017 (Table 2.2).

There has been an overall increase in the level of UK private sector softwood removals in the last decade.

Table 2.2 Private sector softwood removals by country, 2008-2017

Year	England	Wales	Scotland	Northern Ireland	UK
	thousand green tonnes				
2008	638	333	2 827	25	3 823
2009	533	321	2 388	24	3 266

2011	738	501	3 894	53	5 186
2012	847	611	3 761	40	5 259
2013	929	695	4 205	23	5 852
2014	1 165	739	4 691	33	6 627
2015	1 052	686	4 203	28	5 968
2016	1 013	643	4 043	34	5 734
2017	961	783	4 272	36	6 053

Source: Private Sector Softwood Removals Survey

Data: Longer time series of the above table, including estimates for hardwood removals and for removals from FC/NRW/FS woodlands are available from the Data Downloads web page at:

<https://www.forestryresearch.gov.uk/tools-and-resources/statistics/data-downloads/>.

2.1.3 Origin of FC/NRW/FS removals

Information on removals from Forestry Commission (FC), Natural Resources Wales (NRW) and Forest Service (FS) woodlands is obtained from administrative systems.

A total of 4.9 million green tonnes of softwood was removed from FC/NRW/FS woodlands in 2017, a 3% decrease from the 2016 figure (Table 2.3). Over one half (55%) of FC/NRW/FS softwood removals in 2017 occurred in Scotland, 22% in England, 16% in Wales and 7% in Northern Ireland.

In comparison to private sector softwood removals (see Table 2.2), FC/NRW/FS softwood removals have been relatively stable over the last decade.

Table 2.3 FC/NRW/FS softwood removals by country, 2008-2017

Year	England	Wales	Scotland	Northern Ireland	UK
					thousand green tonnes
2008	1 100	556	2 362	398	4 415

<https://www.forestresearch.gov.uk/tools-and-resources/statistics/data-downloads/>.

2.1.4 Softwood availability forecast

The National Forest Inventory "50-year forecast of softwood availability" and "50-year forecast of hardwood availability" were published in April 2014. They are forecasts of potential availability rather than production, as they do not take account of management objectives, financial factors or the state of markets, all of which will affect the level of and timing of harvesting.

More information on the forecasts and detailed breakdowns are available on the National Forest Inventory web pages at www.forestryresearch.gov.uk/tools-and-resources/national-forest-inventory/.

The forecasts are outside the scope of National Statistics, but are provided here to give more context to the data on wood production.

As these forecasts were produced in 2014, they do not take into account any of the findings from the '[preliminary estimates of the changes in canopy cover in British woodlands between 2006 and 2015](#)', released in August 2016.

The key assumptions underpinning the headline softwood forecast scenario include:

- Private woodland is managed in a way that maximises total production.
- The estate of the Forestry Commission and Natural Resources Wales is managed according to current management plans; note both Forestry Commission Scotland and Natural Resources Wales intend to cap production below the level set out in Table 2.4a.

Under the above scenario, softwood availability for Great Britain averages 15.2 million cubic metres a year over the 50-year period 2013 to 2061 (Table 2.4a). The majority (66%) of this softwood is projected to come from private sector woodland.

Source: National Forest Inventory: 50-year forecast of softwood availability (Forestry Commission, April 2014)³

Notes:

1. The estate of the Forestry Commission and Natural Resources Wales is assumed to be managed according to current management plans; note both Forestry Commission Scotland and Natural Resources Wales intend to cap production below the level set out in Table 2.4a.
2. Private woodland is assumed to be managed in a way that maximises total production.
3. More recent softwood availability forecasts, covering a 25 year period only, are available from the NFI web pages at: www.forestresearch.gov.uk/tools-and-resources/national-forest-inventory/how-our-woodlands-might-change-over-time-8211-nfi-forecast-reports/.
4. An update to these figures is due to be published in 2020.
5. To convert softwood 'overbark standing' into green tonnes multiply by 0.818. See the Sources chapter for more details on conversion factors.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

2.1.5 Hardwood availability forecast

The key assumptions underpinning the headline hardwood forecast scenario include:

- In private woodland, harvesting is limited to areas with evidence of recent thinning activity.
- The estate of the Forestry Commission and Natural Resources Wales is managed according to current management plans.

Under the above scenario, hardwood availability for Great Britain averages 1.6 million cubic metres a year over the 50-year period (Table 2.4b). The majority (89%) of this hardwood is projected to come from private sector woodland. If these woodlands were managed to maximise total production, the forecast would be much higher, as illustrated in the full National Forest Inventory report available at www.forestresearch.gov.uk/tools-and-resources/national-forest-inventory/.

Source: National Forest Inventory: 50-year forecast of hardwood availability (Forestry Commission, April 2014)

Notes:

1. The estate of the Forestry Commission and Natural Resources Wales is assumed to be managed according to current management plans.
2. In private woodland, harvesting is assumed to be limited to areas with evidence of recent thinning activity. If these woodlands were managed to maximise total production, the forecast would be much higher, as illustrated in the full National Forest Inventory report available at www.forestresearch.gov.uk/tools-and-resources/national-forest-inventory/.
4. An update to these figures is due to be published in 2020.
5. To convert hardwood 'overbark standing' into green tonnes multiply by 0.900. See the Sources chapter for more details on conversion factors.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

2.2 Deliveries of UK-grown roundwood

Figures for deliveries relate to the quantity of UK-grown roundwood that is delivered to processors (mills) or for other uses (such as woodfuel and exports). They are expressed in green tonnes (weight when freshly felled). Statistics on roundwood deliveries are used to monitor trends in the supply of, and demand for, UK-grown wood.

Deliveries should not be confused with removals, which are the quantities of roundwood that is harvested from UK woodland. Removals statistics are presented in Tables 2.1 to 2.3. A comparison of removals and deliveries of UK softwood roundwood is provided in the Sources chapter.

The data are derived from a number of sources, including surveys of the UK-grown timber industry, trade associations and expert estimates.

2.2.1 Softwood deliveries

In 2017, deliveries of UK roundwood (softwood and hardwood) totalled 11.2 million green tonnes, a 2% increase from the previous year (Tables 2.5 and 2.6).

Most UK roundwood deliveries (93%) were softwood and totalled 10.5 million green tonnes in 2017 (Table 2.5). 6.6 million green tonnes (63% of UK softwood deliveries) were used by sawmills, a 1% increase from the previous year. A further 1.6 million green tonnes were used for wood fuel (3% increase), 1.1 million green tonnes were used to produce wood-based panels (15% decrease), 0.4 million green tonnes by integrated pulp and paper mills (a 4% increase), and 0.8 million green tonnes for other uses (16% increase), including round fencing, shavings and exports of roundwood.

The increase in softwood deliveries for woodfuel in recent years reflects an increase in wood use for heating and energy production in the UK (see the Sources chapter for further information).

Table 2.5 Deliveries of UK-grown softwood, 2008-2017

Year	Sawmills	Pulp mills	Wood-based panels	Fencing	Woodfuel ¹	Other ²	Exports	Total
thousand green tonnes

Source: industry surveys, industry associations.

Notes:

1. Woodfuel derived from stemwood, includes estimates of roundwood use for biomass energy. The figures are estimated by the Expert Group on Timber and Trade Statistics, and make use of woodfuel data reported in the Private Sector Softwood Removals Survey.

2. Includes shavings and poles. Quantities for some uses are estimates by the Expert Group on Timber and Trade Statistics.

Figure 2.1 Deliveries of UK-grown softwood, 1994-2017

Source: industry surveys, industry associations.

Experimental statistics on the destination of softwood (wood from conifer trees) removed from UK forests by country are available in the excel spreadsheets that accompany this report.

2.2.2 Hardwood deliveries

There was a total of 0.7 million green tonnes of UK hardwood deliveries in 2017 (Table 2.6). The majority of UK hardwood deliveries (81% in 2017) were used for woodfuel.

Table 2.6 Deliveries of UK-grown hardwood, 2008-2017

Year	Sawmills	Pulp mills	Wood-based panels	Woodfuel	Other	Total
thousand green tonnes						
2008	66	0	2	300	63	431

Notes:

1. Figures are based on processing industries' purchases of hardwood grown in the UK and estimates for woodfuel and other uses.
2. Woodfuel reported here is derived from stemwood and includes estimated roundwood use for biomass energy.
3. The apparent increase in woodfuel from 2016 to 2017 reflects a new estimate of the level of hardwood deliveries for woodfuel and should not be interpreted as an increase in a single year. This figure is currently under review.
4. Other includes round fencing and roundwood exports.

Figure 2.2 Deliveries of UK-grown hardwood, 1994-2017

Source: industry surveys, industry associations.

Notes:

1. Other includes round fencing and roundwood exports.
2. The apparent increase in woodfuel from 2016 to 2017 reflects a new estimate of the level of hardwood deliveries for woodfuel and should not be interpreted as an increase in a single year. This figure is currently under review.

2.3 Sawmills - All Mills

Data are collected by Forest Research in an annual Sawmill Survey. The following section includes summary results, covering number of mills, consumption and production are available for all mills.

In addition, there are also more detailed figures for larger mills only. The threshold defining larger mills was changed for the collection of 2016 data, from annual sawnwood production of 10 thousand m³ to annual sawnwood production of 25 thousand m³. Further information on this change is provided in the section on Larger Mills within this chapter and in the Sawmill Survey section of the Sources chapter.

Consumption units are given in green tonnes. For production, the units used are m³ sawnwood. For conversion factors between different units, see the Timber section of the Sources chapter.

2.3.1 Summary: consumption & production

In 2017, sawmills in the UK consumed a total of 6.8 million green tonnes of softwood, a 2% increase from 2016 (Table 2.7). A further 0.1 million green tonnes of hardwood were consumed by UK sawmills in 2017. Most of the logs, 6.6 million green tonnes softwood and 0.1 million green tonnes hardwood, were grown in the UK.

A total of 3.7 million cubic metres of sawnwood was produced in the UK in 2017, a 3% increase from 2017.

The levels of softwood consumption and sawn softwood production in the UK have increased by around one third between 2008 and 2017.

In addition to producing sawnwood, sawmills also generate other products. Further information on other products produced by larger mills are provided in Tables 2.18 and 2.18a.

Table 2.7 Consumption and production by UK sawmills, 2008-2017

Year	Softwood			Hardwood

2.3.2 Number of sawmills by size

A total of 164 sawmills processed UK roundwood in 2017 (Table 2.8). Most mills (84%) produced less than 25 thousand m³ sawnwood (softwood and hardwood) during the year.

Over the past ten years, the number of active sawmills has reduced by 17%. Most of this decrease has occurred in the smallest size categories.

Table 2.8 Number of sawmills by size of mill, 2008-2017

Year	Size of mill (total production) ¹							Total
	< 1	1 - < 5	5 - < 10	10 - < 25	25 - < 50	50 - < 100	100+

Categories are based on total sawnwood production (softwood and hardwood), in thousand m³.

Data: Longer time series of the above table are available from the Data Downloads web page at:

<https://www.forestresearch.gov.uk/tools-and-resources/statistics/data-downloads/>

2.3.3 Number of sawmills by country

Around one half (54%) of the 164 active sawmills in 2017 were in England, around one third (32%) were in Scotland, 9% in Wales and 5% in Northern Ireland (Table 2.9).

Table 2.9 Number of sawmills by country, 2008-2017

Year	England	Wales	Scotland	Northern Ireland	UK

2.3.4 Number of sawmills by type of wood sawn

Around two thirds (67%) of the 164 active sawmills in 2017 processed softwood only (Table 2.10). A further 27% processed both softwood and hardwood, and the remaining 6% processed only hardwood.

Table 2.10 Number of sawmills by type of wood sawn, 2008-2017

2.3.6 Consumption of softwood by mills in each country

Mills in Scotland consumed around one half (51%) of the 6.8 million green tonnes of softwood delivered to UK sawmills in 2017 (Table 2.12). A further 31% was consumed by mills in England, 10% in Wales and 9% in Northern Ireland.

Table 2.12 Consumption of softwood by country, 2008-2017

Year	England	Wales	Scotland	Northern Ireland	UK
thousand green tonnes

Data: Longer time series of the above table, and for mills in England by region, are available from the Data downloads web page at: <https://www.forestresearch.gov.uk/tools-and-resources/statistics/data-downloads/>

2.3.7 Production of sawn softwood by size of mill

UK sawmills produced a total of 3.7 million cubic metres of sawn softwood in 2017, a 3% increase from the 2016 figure (Table 2.13).

Sawmills with total annual sawnwood production of 25 thousand cubic metres or more accounted for 85% of the total sawn softwood produced by sawmills in 2017.

Table 2.13 Production of sawn softwood by size of mill, 2008-2017

Year	Size of mill (total production) ¹							Total

Notes:

Categories are based on total sawnwood production (softwood and hardwood), in thousand m³.

Data: Longer time series of the above table, are available from the Data downloads web page at: <https://www.forestryresearch.gov.uk/tools-and-resources/statistics/data-downloads/>

2.3.8 Production of sawn softwood by mills in each country

1.9 million cubic metres (52%) of sawn softwood was produced by sawmills in Scotland in 2017 (Table 2.14). A further 31% was produced by mills in England, 9% in Wales and the remaining 9% in Northern Ireland.

Over the last 10 years production of sawn softwood by mills in England and Scotland has increased steadily, while production by mills in Wales and Northern Ireland has seen relatively little increase in the last 10 years.

Table 2.14 Production of sawn softwood by country, 2008-2017

Year	England	Wales	Scotland	Northern Ireland	UK

2.4 Sawmills - Larger Mills

The following, more detailed, tables are available for larger mills (those producing at least 25 thousand m³ sawnwood annually) only.

These larger mills are estimated to account for 85% of all sawn softwood produced in 2017 (see Table 2.13). In order to provide consistent time series, data presented in this section for 2015 and earlier years is also restricted to sawmills that produced at least 25 thousand m³ sawnwood in the relevant year.

The tables cover the following topics:

- Source of softwood logs;
- Sawn softwood product markets;
- Other softwood products; and
- Sawmill employment.

2.4.1 Softwood consumption and production

Total softwood consumption by the 27 sawmills covered by the detailed sawmill survey in 2017 was 5.8 million green tonnes (Table 2.15). Sawn softwood production by these mills was 3.2 million m³ and other softwood products (chips, bark, sawdust, etc) amounted to 3.0 million tonnes.

Sawmills in Scotland accounted for over one half (52%) of all softwood consumption by larger mills. A further 30% was consumed by mills in England, 10% in Wales and the remaining 9% in Northern Ireland.

Table 2.15 Larger mills¹, 2017: softwood consumption and production

	England	Wales	Scotland	Northern Ireland	UK
Number of mills	10	2	13	2	27

Notes:

Sawmills producing at least 25 thousand m³ sawnwood (softwood and hardwood).

2.4.2 Source of softwood logs

Of all softwood sawlogs consumed by larger sawmills in 2017, 57% came from Scotland, 20% from England, 14% from Wales and 4% from Northern Ireland (Tables 2.16 and 2.16a). The remaining 5% were imported from other countries. This was similar to the breakdown by source in previous years.

97% of softwood sawlogs used by Scottish mills in 2017 came from Scotland. The corresponding proportions of mills' log use coming from within the same country were 61% for England, 81% for Wales and 47% for Northern Ireland.

Table 2.16 Larger mills¹, 2017: source of softwood logs

2.4.3 Sawn softwood product markets

In 2017, 36% of sawn softwood produced by larger sawmills was used for fencing, 32% for construction, 24% for packaging and pallets, and the remaining 8% went to all other markets (Tables 2.17 and 2.17a).

Notes:

1. Sawmills producing at least 25 thousand m³ sawnwood (softwood and hardwood).

2.4.4 Other softwood products

Sawmills were asked to estimate the quantity of other products (excluding sawnwood) that they generated from softwood and sold to different industries. The figures presented below are based on these estimates.

Other softwood products amounted to 3.0 million tonnes in 2017 (Table 2.15). Two fifths (40%) of other softwood products were sold to wood processing industries in the form of chips and 16% were sold to these industries in sawdust and other formats (Table 2.18). A further 22% of other products were sold to bio-energy (including pellet manufacturers) and 19% were sold to others.

Table 2.18 Larger mills¹, 2017: other softwood products

Destination and type of product ²	England	Wales	Scotland	Northern Ireland	UK
	per cent of total other softwood products				
Sold to wood processing industries

Total	26	12	18	20	19

Source: Sawmill Survey (detailed)

Notes:

1. Sawmills producing at least 25 thousand m³ sawnwood (softwood and hardwood).
2. The table does not show internal use for heat/energy, sales of firewood and other products disposed of as waste, which together accounted for around 3% of other softwood products.

The proportions of other products that were sold to wood processing industries has reduced over the last five years, whilst other sales have increased (Table 2.18a).

Table 2.18a Larger mills¹, 2013-2017: other softwood products

2. Other includes internal use for heat/energy, sales of firewood and other products disposed of as waste.

2.4.5 Sawmill employment

There were estimated to be 2.9 thousand full-time equivalent staff employed directly by sawmills producing at least 25 thousand m³ of sawnwood in 2017 (Tables 2.19 and 2.19a).

Table 2.19 Larger mills¹, 2017: sawmill employment

Employment type	England	Wales	Scotland	Northern Ireland	UK

2.5 Pulp & paper

Statistics on inputs to the pulp & paper industry only cover the integrated pulp & paper mills in the UK that use UK roundwood. There were four such mills until 2003, three from 2004 and two from spring 2006. Figures on inputs are provided by the UK Forest Products Association.

Figures on production of pulp and paper are provided by the Confederation of Paper Industries, and cover all paper production in the UK, not just from mills using UK roundwood.

2.5.1 Inputs for the integrated pulp & paper mills

The integrated pulp & paper mills in the UK consumed a total of 0.5 million tonnes of material (all softwood) in 2017 this is unchanged from the 2016 total (Table 2.20).

UK roundwood represented 88% of the inputs for the integrated pulp & paper mills in 2017, with the remaining 12% coming from sawmill products.

Table 2.20 Inputs for the integrated pulp & paper mills¹, 2008-2017

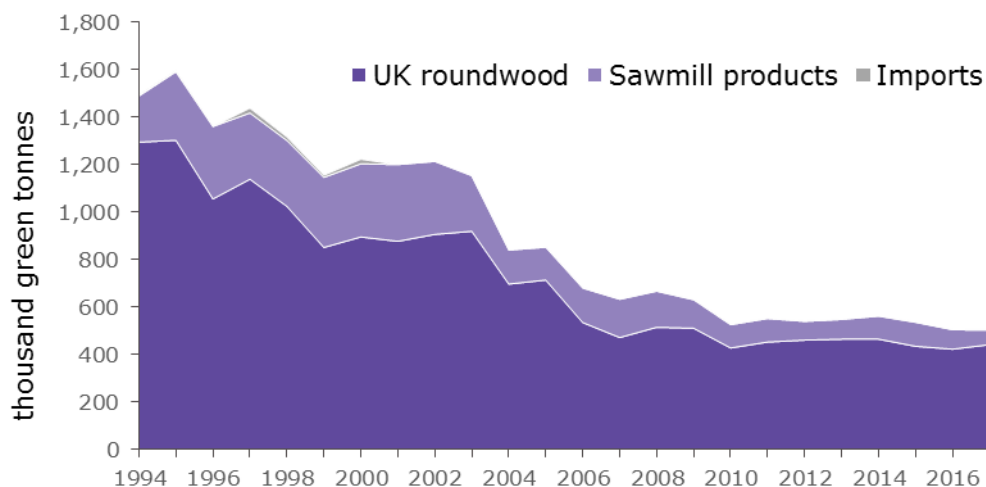

Year	UK roundwood ²	Sawmill products	Total
<i>thousand green tonnes</i>			
2008	515	152	667

2014	465	97	562
2015	435	101	536
2016	423	82	505
2017	442	61	503

Source: UK Forest Products Association

Notes:

1. Excludes inputs of recycled paper and cardboard. All inputs are softwood.
2. UK roundwood derived from stemwood.

Figure 2.3 Inputs to integrated pulp and paper mills

Source: UK Forest Products Association

2.5.2 Production of paper

Figures for the production of paper (Table 2.21) are provided by the Confederation of Paper Industries. They cover all paper production from UK mills, not just those using UK roundwood. Most UK paper production uses recovered waste paper or imported pulp.

A total of 3.9 million tonnes of paper and paperboard was produced in the UK in 2017, an increase of 5% from the previous year. Packaging materials accounted for 50% of the total UK paper production in 2017, graphic papers (including newsprint) for 24%, and sanitary and household papers for 19%.

Table 2.21 Production of paper and paperboard, 2008-2017

Year	Graphic papers (incl newsprint)	Sanitary & household papers	Packaging materials	Other	Total paper & paperboard
					thousand tonnes
2008	2 063	783	1 838	299	4 983
2009	1 609	736	1 702	246	4 293
2010	1 637	729	1 640	294	4 300
2011	1 669	766	1 600	307	4 342
2012	1 616	795	1 798	271	4 480
2013	1 636	802	1 851	272	4 561

2.6 Wood-based panels

Wood-based panels include oriented strand board (OSB), wood chipboard and cement bonded particleboard (which are all types of particleboard), and medium density fibreboard (MDF) and other fibreboard (which are both types of fibreboard).

Statistics on wood-based panels are provided by the Wood Panel Industries Federation (WPIF).

2.6.1 Inputs for wood-based panel products

Table 2.22 and Figure 2.4 show the inputs to mills that produce wood-based panels in the UK. The mills used a total of 3.7 million tonnes of material in 2017, representing a 4% decrease from 2016. The inputs in 2017 comprised 1.1 million green tonnes of roundwood (28%), 1.7 million green tonnes of sawmill products (46%) and 0.9 million tonnes of recycled wood fibre (25%).

Table 2.22 Inputs to wood-based panel mills, 2008-2017

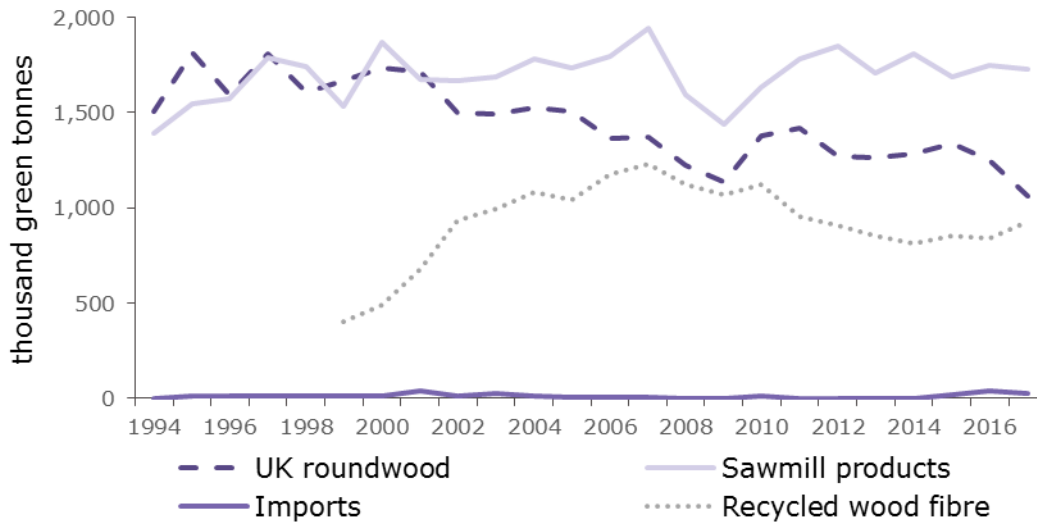

Year	UK roundwood ¹		Sawmill products		Imports ²		Total

2017	1 059	0	1 726	0	0	22	2 785	22	923

Source: Wood Panel Industries Federation

Notes:

1. UK roundwood derived from stemwood.
2. Imports include roundwood, wood products and products from imported wood.
3. Recycled wood fibre is wood fibre recovered from both pre- and post-consumer wood waste for use in woodbased panel production. It comprises wood originally grown in the UK and wood originally grown in forests outside the UK.
4. Quantities are as delivered, with an assumed average moisture content of 25%. To convert to green tonnes (assuming moisture content of 52%), multiply by 1.56.

Figure 2.4 Inputs to wood-based panel mills

Note:

1. Recycled wood fibre data not available before 1999.

Source: Wood Panel Industries Federation

2.6.2 Production of wood-based panel products

Total production of wood-based panels in 2017 was 3.2 million cubic metres, a 5% increase from 2016 (Table 2.23). Over three quarters (79%) of wood-based panel products produced in the UK in 2017 were particleboard (including oriented strand board (OSB)).

The marked decrease between 2011 and 2012 largely results from the closure of a panel mill in 2012.

Table 2.23 Wood-based panel production, 2008-2017

Year	Particleboard ¹	Fibreboard ²	Total
			thousand cubic metres
2008	2 431	709	3 140
2009	2 370	660	3 030
2010	2 594	776	3 370
2011	2 625	759	3 384
2012	2 215	788	3 003
2013	2 276	756	3 032
2014	2 319	749	3 068
2015	2 324	756	3 080
2016	2 349	684	3 033
2017	2 501	675	3 176

Source: Wood Panel Industries Federation

Notes:

1. Includes Oriented Strand Board (OSB).
2. Includes Medium Density Fibreboard (MDF).
3. Changes in the mix of materials used and type of product produced can result in apparent discrepancies between the trends for inputs (Table 2.22) and production.

2.7 Miscellaneous products

Softwood

Data for softwood fencing are obtained from the Survey of Round Fencing Manufacturers. Figures for other uses are reported by manufacturers or are estimated by representatives of the wood processing industries.

1.6 million green tonnes of UK softwood were estimated to have been used directly for woodfuel (including biomass energy) in 2017, an increase of 3% from the previous year (Table 2.24). A further 295 thousand green tonnes of UK softwood were consumed by round fencing manufacturers and 170 thousand green tonnes for other uses in 2017.

Table 2.24 Miscellaneous uses of UK softwood roundwood, 2008-2017

Year	Fencing	Woodfuel ¹	Other ²	Total
thousand green tonnes				
2008	359	300	128	787
2009	367	650	160	1 178
2010	349	900	135	1 384
2011	363	900	145	1 408
2012	338	1 000	154	1 492
2013	332	1 250	191	1 773
2014	317	1 500	176	1 992
2015	288	1 600	164	2 052
2016	277	1 550	178	2 006
2017	295	1 600	170	2 064

Source: Survey of Round Fencing Manufacturers, industry associations.

Notes:

1. Woodfuel derived from stemwood. Includes estimates of roundwood use for biomass energy. The figures are estimated by the Expert Group on Timber and Trade Statistics, and from 2008 made use of woodfuel data reported in the Private Sector Softwood Removals Survey.

2. Includes shavings and poles. Quantities for some uses are estimates by the [Expert Group on Timber and Trade Statistics](#).

Hardwood

An estimated 600 thousand³ green tonnes of UK hardwood were used for woodfuel (including biomass energy) in 2017. A further 30 thousand green tonnes were estimated to have been consumed by round fencing manufacturers and 71 thousand green tonnes for other uses, including exports.

³ 600 thousand green tonnes reflects a new estimate of the level of hardwood deliveries used for woodfuel and should not be interpreted as an increase in a single year. This figure is currently under review.

2.7.1 Softwood round fencing manufacturers

There were 50 active round fencing manufacturers in 2017 (Table 2.25).

Around two thirds of round fencing manufacturers (66%) consumed less than 5 thousand green tonnes of softwood annually.

Table 2.25 Number of softwood round fencing manufacturers, 2008-2017

Notes:

Categories are based on total softwood consumption, in thousand green tonnes.

Data: Longer time series of the number of softwood round fencing manufacturers, by size category and by country (England/ Wales/ Scotland/ Northern Ireland) are available from the Data downloads web page at:

<https://www.forestresearch.gov.uk/tools-and-resources/statistics/data-downloads/>.

2.7.2 Roundwood purchased by softwood round fencing manufacturers

A total of 295 thousand green tonnes of softwood (UK grown and imported) was purchased by softwood fencing manufacturers in 2017 (Table 2.26). This represents an increase of 6% from the 2016 total of 277 thousand green tonnes.

Table 2.26 Total roundwood purchased by softwood round fencing manufacturers, 2008-2017

Year	Size category (consumption) ¹				Total
	< 1	1 - < 5	5 - < 10	10 +

2017	6	44	67	178	295

Source: Survey of Round Fencing Manufacturers

Notes:

1. Categories are based on total softwood consumption, in thousand green tonnes.
2. This table includes purchases of both UK grown and imported softwood, whereas table 2.24 relates to UK grown softwood only.

Data: Longer time series of roundwood purchased by round fencing manufacturers, by size category and by country (England/ Wales/ Scotland/ Northern Ireland) are available from the Data downloads web page at: <https://www.forestresearch.gov.uk/tools-and-resources/statistics/data-downloads/>

2.8 Exports

UK softwood exports in 2017 consisted of 124 thousand green tonnes of industrial roundwood (excluding sawlogs) and 207 thousand green tonnes of sawlogs, giving a total of 331 thousand green tonnes of roundwood (Table 2.27). The quantity of softwood roundwood exports increased by 43% between 2016 and 2017.

The UK also exported 92 thousand tonnes of softwood chips in 2017, an 82% increase from the previous year.

Table 2.27 Summary of softwood exports, 2008-2017

Year	Roundwood			Chips
	Industrial roundwood ¹	Sawlogs	Total	
				thousand green tonnes
2008	556	176	733	176

2017	124	207	331	92

Source: industry associations

Notes:

1. Includes all roundwood other than sawlogs.

2.9 Certification

Forest certification assesses forest management practices against an agreed standard and awards a label to those forest products that meet the standard. In order for products to achieve certification, both [forest management practices and the Chain of Custody](#), which tracks timber from forest to retail outlet, must be assessed.

The following tables provide information on the level of certified wood produced in the UK (Table 2.28) and the number of sawmills and round fencing manufacturers holding Chain of Custody certificates (Table 2.29). Information on areas of certified woodland is provided in Chapter 1.

2.9.1 Volume certified

Respondents to the industry surveys run by Forest Research were asked to report on volumes of wood that is certified. 75% of private sector softwood removals in 2017 were from certified sources (Table 2.28). The percentage of private sector softwood removals that are certified has fluctuated over recent years; industry experts have indicated a general reduction in the level of certification amongst smaller estates and an increase in production from larger estates.

As nearly all removals from Forestry Commission, Natural Resources Wales and Forest Service woodland are certified, this equates to around 86% of all softwood removals in 2017 from certified sources.

70% of sawmills' roundwood consumption in 2017 was certified. For round fencing manufacturers, 64% of total softwood consumption was certified.

Table 2.28 Per cent of volume certified, 2008-2017

Year	Removals		Sawmills	Round fencing manufacturers
	Softwood from Private sector woodland	Total softwood (including all removals from FC/NRW/FS woodland)	Consumption (softwood and hardwood)	Consumption (softwood)

2014	72	84	70	69
2015	69	83	66	71
2016	66	82	69	70
2017	75	86	70	64

Source: industry surveys

2.9.2 Chain of custody certificates

Sawmills and round fencing manufacturers were also asked whether they held a Chain of Custody certificate. 69% of sawmills for which the certification status was known held a Chain of Custody certificate in 2017 (Table 2.29). This proportion varied with size of mill, from 36% for mills producing less than 5 thousand m³ sawnwood to 100% for those producing 25 thousand m³ sawnwood or more. The majority (63%) of round fencing manufacturers for which the certification status was known held a Chain of Custody certificate.

Table 2.29 Chain of custody certificates, 2017

	Mills holding certificate	Mills without certificate	Certification status not known	Total ¹
Sawmills² (size of mill³)				
< 5	10	18	75	103
5 - < 25	13	4	17	34
25 +	26	0	1	27
All sawmills	49	22	93	164
Round fencing manufacturers	12	7	31	50

Source: industry surveys

Notes:

1. Includes non-respondents to survey in current year.
2. For large sawmills (those producing at least 25 thousand m³) that did not report whether or not they held a certificate or did not respond to the 2017 survey, the certification status was obtained from the FSC database, where possible.
3. Categories are based on total sawnwood production (softwood and hardwood), in thousand m³.

2.10 Woodfuel and pellets

Wood from various sources can be used for fuel, including roundwood, chips and sawdust from wood processing, specific products such as pellets and briquettes, and recycled wood.

The following pages provide data on:

- recycled wood used for woodfuel (Table 2.30 below);
- woodfuel supply by sawmills and round fencing manufacturers (Table 2.31); and
- wood pellet production (Table 2.32) and feedstock (Table 2.33).

In addition, estimates of roundwood used directly for woodfuel are provided in tables 2.5 and 2.6.

Recycled wood used for woodfuel

Estimates of recycled wood used for woodfuel have been obtained from the Wood Recyclers' Association. In 2017, it is estimated that around 1.7 million tonnes of recycled wood were used for woodfuel, an increase of 7% from the 2016 estimate of around 1.6 million tonnes.

Table 2.30 Recycled wood used for woodfuel, 2010-2017

Year	Total
	million tonnes
2010	0.55
2011	0.59

2016	1.55
2017	1.66

Source: Wood Recyclers Association

Notes:

1. Post consumer recovered wood, comprising wood originally grown in the UK and wood originally grown in forests outside the UK.
2. Figures for 2014 to 2017 relate to capacity, rather than consumption.
3. Quantities are as delivered, with an assumed average moisture content of 25%. To convert to green tonnes (assuming moisture content of 52%), multiply by 1.56.

These figures are outside the scope of National Statistics.

2.10.1 Woodfuel supply by sawmills and round fencing manufacturers

An estimated 701 thousand green tonnes (mainly softwood) of woodfuel were supplied by sawmills in 2017 and a further 66 thousand green tonnes were supplied by round fencing manufacturers (Table 2.31). 85% of the total woodfuel supplied was sold to bioenergy.

Table 2.31 Woodfuel supply¹ by sawmills and round fencing manufacturers, 2013-2017

2017	55	7	3	66

Source: Sawmill Survey, Survey of Round Fencing Manufacturers

Notes:

1. Material reported as sales/use for woodfuel, but may have been used for other purposes.

2.10.2 Wood pellet production

Wood pellets and briquettes are processed wood products that can be made from roundwood, sawmill products and/or recycled wood. Some of the wood used to make wood pellets and briquettes will be accounted for elsewhere in this release (e.g. in Tables 2.30 and 2.31). Wood pellets and briquettes are often used for woodfuel, but pellets may also be used for other purposes (such as horse bedding or cat litter).

A total of 287 thousand tonnes of wood pellets and briquettes are estimated to have been produced in the UK in 2017. This represents a 13% decrease from the 2016 estimate of 329 thousand tonnes.

Table 2.32 Wood pellet production, 2010-2017

2016	329
2017	287

Source: Survey of UK Pellet and Briquette Production

2.10.3 Wood pellet feedstock

A total of 648 thousand tonnes of feedstock was used to produce wood pellets in the UK in 2017 (Table 2.33).

Roundwood accounted for over one half (55%) of the feedstock.

Table 2.33 Wood pellet feedstock, 2013-2017

Notes:

1. May also include wood from other sources (e.g. energy crops, arboriculture arisings and recycled wood).

Chapter 3: Trade

Introduction

This chapter contains information about UK imports and exports of wood products, and about the level of apparent consumption estimated from data for UK production, imports and exports.

Information on imports and exports mainly comes from the Overseas Trade Statistics compiled by HM Revenue & Customs. Estimates are provided at a UK level only. International comparisons of apparent consumption are provided in the International Forestry chapter. Further information on the data sources and methodology used to compile the figures is provided in the Sources chapter.

Figures for 2017 were previously published in "UK Wood Production and Trade: 2017 Provisional Figures", released on 17 May 2018. Some figures for 2017 and earlier years have been revised from those previously published. For further details on revisions, see the Trade section of the Sources chapter.

A copy of all trade tables is available to download as an Excel spreadsheet from <https://www.forestresearch.gov.uk/tools-and-resources/statistics/data-downloads/>.

Key findings

The main findings are:

UK imports:

- 7.9 million cubic metres of sawnwood in 2017, a 16% increase from the 2016 figure;
- 3.4 million cubic metres of wood-based panels in 2017, a 1% increase from 2016;
- 6.9 million tonnes of wood pellets in 2017, a 2% increase from 2016;
- 5.6 million tonnes of paper in 2016, a 5% decrease from 2016.
- The total value of wood product imports in 2017 was £7.8 billion, representing a 5% increase from 2016; of which £4 billion was pulp and paper.
- Sawn softwood, particleboard, fibreboard, and paper and paperboard were overwhelmingly imported from EU countries in 2017.
- Sawn hardwood and wood pulp imports originated from a range of both EU and non-EU countries in 2017.
- The vast majority of UK imports of plywood and wood pellets in 2017 came from countries outwith the EU.
- Apparent consumption of wood in the UK was 57.0 million m³ WRME underbark in 2017, representing a 1% increase on the previous year.

UK exports:

- The total value of wood product exports in 2017 was £1.9 billion, a 26% increase from 2016; of which £1.7 billion was pulp and paper.

3.1 Apparent consumption of wood in the UK

Apparent consumption is the amount of timber used as wood and wood products by people and industries in the United Kingdom. It is calculated as total United Kingdom production plus imports, minus exports. Apparent consumption differs from actual consumption by the extent of changes in the level of stocks. It is not practical to collect information on actual consumption.

As table 3.1 covers a broad range of products (including secondary processed wood products), volumes are expressed in wood raw material equivalent (WRME) underbark. WRME volumes represent the amount of wood that would have been required to make the product.

UK production of roundwood totalled 10.9 million m³ WRME underbark in 2017 (Table 3.1). A further 50.3 million m³ WRME underbark of wood and wood products were imported to the UK and 4.2 million m³ WRME underbark were exported, giving apparent consumption of 57.0 million m³ WRME underbark. This represented a 1% increase in apparent consumption from the previous year. These figures exclude recycled wood and recovered paper (see Table 3.3 for statistics on recovered paper).

Imports accounted for 82% of all wood (production + imports) in the UK in 2017.

Table 3.1 Apparent consumption of wood¹ in the UK, 2008-2017

Year	UK production ²	Imports	Exports	Apparent Consumption
million m ³ WRME underbark				
2008	8.4	46.3	5.3	49.4
2009	8.6	39.5	4.2	44.0

Source: Industry surveys, industry associations, UK overseas trade statistics (HM Revenue & Customs) and conversion factors to Wood Raw Material Equivalent (WRME).

Notes:

1. Excludes recovered paper.

2. UK production of roundwood is estimated from deliveries to wood processing industries and others, as in tables 2.5 and 2.6.

Figure 3.1 Apparent consumption of wood¹ in the UK, 1999-2017

Source: Industry surveys, industry associations, UK overseas trade statistics (HM Revenue & Customs) and conversion factors to Wood Raw Material Equivalent (WRME).

Notes:

1. Excludes recovered paper.
2. UK production of roundwood is estimated from deliveries to wood processing industries and others, as in tables 2.5 and 2.6.

3.2 Apparent consumption of wood products in the UK

Table 3.2 provides volumes of UK production, trade and apparent consumption in selected wood products. It differs from table 3.1 in terms of both coverage (table 3.1 covers a wider range of wood and wood products, including secondary processed products) and in terms of units (wood raw material equivalents in table 3.1, volumes of product in table 3.2).

UK production accounted for 33% of the UK sawnwood market, 51% of the UK wood-based panel market and 44% of the UK paper market in 2017 (Table 3.2).

Table 3.2 Apparent consumption of wood products^{1,2} in the UK, 2017

Source: Industry surveys, industry associations, UK overseas trade statistics (HM Revenue & Customs).

Notes:

1. Excludes other wood products, e.g. fuelwood and round fencing.
2. Excludes roundwood and intermediate products (e.g. sawmill products, pulp and recovered paper) to avoid double-counting.
3. Includes sleepers from 2017.

3.3 Flow of recovered paper

UK production of recovered paper (the amount recovered from businesses and households in the UK) totalled 7.8 million tonnes in 2017 (Table 3.3) a decrease of 1% from 2016. Figures for 2017 also suggest a 14% decrease in imports and a 4% decrease in exports of recovered paper from 2016, however, there was an increase in apparent consumption between 2016 and 2017 (Table 3.3).

Table 3.3 Flow of recovered paper, 2008-2017

Source: Confederation of Paper Industries, UK overseas trade statistics (HM Revenue & Customs).

Notes:

1. Apparent consumption of recovered paper refers to use of recycled paper pulp in the UK.

3.4 UK import quantities by product

Wood imports to the UK in 2017 included 7.9 million cubic metres of sawnwood (a 16% increase from the previous year), 3.4 million cubic metres of wood-based panels (1% increase) and 6.9 million tonnes of wood pellets (2% increase) (Table 3.4). A total of 5.6 million tonnes of paper was imported into the UK in 2017, a decrease of 5% from 2016.

Table 3.4 UK import quantities, 2008-2017¹

Notes:

1. There are reliability concerns for some of these figures, particularly for individual products (see Sources chapter).
2. Includes roundwood, wood charcoal, chips, particles, residues and from 2017, includes recovered wood. Excludes wood pellets from 2009.
3. .. Denotes data not available (wood pellets included within 'Other wood' category before 2009).
4. Includes veneer sheets.
5. Sawnwood includes sleepers from 2017.

3.5 UK export quantities by product

A total of 5.5 million tonnes of pulp and paper (including recovered paper) was exported from the UK in 2017 (table 3.5), representing a 3% decrease from 2016.

Table 3.5 UK export quantities, 2008-2017¹

3. .. Denotes data not available (wood pellets included within 'Other wood' category before 2009).
4. Includes veneer sheets.
5. Sawnwood includes sleepers from 2017.

3.6 UK import values by product

Wood product imports in 2017 were valued at a total of £7.8 billion, a 5% increase from 2016 (Table 3.6).

Pulp and paper (including recovered paper) imports were valued at £4.0 billion in 2017 (almost half of the total value of wood product imports). Sawnwood imports were valued at £1.6 billion in 2017, wood-based panels at £1.1 billion and wood pellets at £1.0 billion.

Notes:

1. There are reliability concerns for some of these figures, particularly for individual products (see Sources chapter).
2. Includes roundwood, wood charcoal, chips, particles, residues and, from 2017, includes recovered wood. Excludes wood pellets from 2009.
3. .. Denotes data not available (wood pellets included within 'Other wood' category before 2009).
4. Includes veneer sheets.
5. Sawnwood includes sleepers from 2017.

3.7 UK export values by product

Wood product exports from the UK were valued at a total of £1.9 billion in 2017, a increase of 26% from the 2016 total (Table 3.7). Total exports of wood products in 2017 comprised 89% pulp and paper (mainly paper), 6% wood-based panels, 3% sawnwood and 2% other wood.

Table 3.7 UK export values, 2008-2017¹

Year	Sawn wood ⁵	Wood-based panels ⁴	Other wood ²	Wood pellets ³	Paper	Pulp	Recovered paper	Total pulp & paper	Total

4. Includes veneer sheets.
5. Sawnwood includes sleepers from 2017.

3.8 Origin of wood imports

Table 3.8 presents data on the source of selected wood products that have been imported into the UK in 2017.

Sawn softwood, particleboard, fibreboard, and paper and paperboard were overwhelmingly imported from EU countries in 2017 (Table 3.8):

- Sweden (42%), Latvia (16%) and Finland (14%) provided the majority of imports of sawn softwood to the UK.
- Most particleboard imports to the UK came from Germany (19%), France (17%) and Latvia (16%).
- Ireland (29%), Germany (20%) and Spain (13%) were the principal sources of fibreboard imports.
- Most paper and paperboard imports came from Germany (18%), Finland (16%) and Sweden (15%).

Sawn hardwood and wood pulp imports originated from a range of both EU and non-EU countries in 2017:

- Estonia (17%) was the largest single source of sawn hardwood imports to the UK.
- Brazil (21%), Sweden (24%) and Netherlands (16%) provided around two thirds of wood pulp imports to the UK.

The vast majority of UK imports of plywood and wood pellets came from countries outside the EU in 2017:

- China (37%) and Brazil (18%) were the principal sources of plywood imports to the UK.
- The USA (59%) and Canada (21%) provided the majority of wood pellet imports to the UK.

Source: UK overseas trade statistics (HM Revenue & Customs), industry associations.

Notes:

1. Sawntwood imports in this table exclude sleepers.

Figure 3.2 shows the main sources of imports of sawn softwood to the UK since 1962. The total level of sawn softwood imports has fluctuated between around 5 million m³ and 10 million m³ from 1962 to present. Imports to the UK from Canada have reduced substantially since the early 1990s. In contrast imports from the Baltic States increased between 1992 and 2003 and, although there was some decline between 2003 to 2012, imports from the Baltic States to the UK have started to increase again in recent years. Since 1993 Sweden has consistently been the principal country of origin for UK sawn softwood imports.

Figure 3.2 Country of origin of sawn softwood imports to the UK, 1962-2017

Source: FAO, UK overseas trade statistics (HM Revenue & Customs), industry associations.

Notes:

1. Sawn softwood imports in this chart exclude sleepers.

Chapter 4: UK Forests and Climate Change

Introduction

This chapter contains information on:

- carbon in forests;
- the Woodland Carbon Code; and
- public attitudes to forestry and climate change.

Estimates for England, Wales, Scotland and Northern Ireland are included, where possible, in addition to UK totals. International comparisons of carbon stocks are provided in the International Forestry chapter. Further information on the data sources and methodology used to compile the figures is provided in the Sources chapter.

All of the statistics presented in this chapter have been previously released.

The statistics on carbon sequestration (Table 4.2 and Figure 4.2) and Woodland Carbon Code (Tables 4.3a and 4.3b) have been revised since "Forestry Statistics 2017". For further details on revisions, see the UK Forests and Climate Change section of the Sources chapter.

A copy of all UK Forests and Climate Change tables is available to download as an Excel spreadsheet from <https://www.forestresearch.gov.uk/tools-and-resources/statistics/data-downloads/>.

In addition to the statistics presented here, information on UK forests and climate change is available from "Combating Climate Change - a role for UK forests" (The Read Report), an independent assessment of the science published in November 2009 and available at [www.forestry.gov.uk/pdf/SynthesisUKAssessmentfinal.pdf/\\$FILE/SynthesisUKAssessmentfinal.pdf](http://www.forestry.gov.uk/pdf/SynthesisUKAssessmentfinal.pdf/$FILE/SynthesisUKAssessmentfinal.pdf).

Key findings

The main findings are:

- The total carbon stock in UK forests is estimated to have increased between 1990 and 2015.
- The annual rate of accumulation of carbon in UK forests is forecast to fall from around 21 million tonnes CO₂ in total in 2020 to around 19 million tonnes CO₂ by 2030.
- A total of 239 projects were registered under the Woodland Carbon Code at 31 March 2018, covering an area of 16.1 thousand hectares of woodland and projected to sequester 5.8 million tonnes of carbon dioxide.
- 84% of the UK public agrees with the statement "a lot more trees should be planted" in response to the threat from climate change.

4.1 Carbon cycle

Figure 4.1 shows a forest's contribution to the carbon cycle. Trees absorb carbon dioxide through photosynthesis and release it through respiration; the difference is new biomass. Some of this biomass is dropped to the forest floor as litter (foliage, deadwood, etc), which in due course decays and is either released back to the atmosphere or becomes part of soil carbon. The remainder accumulates as increment in the forest, mostly as stemwood, branches or roots. A proportion of this accumulated biomass is harvested, for wood products or fuelwood; the rest is a net addition to the biomass stored in the forest.

Figure 4.1 Carbon Cycle

4.2 Forest carbon stock

Forest carbon stock is the amount of carbon that has been sequestered from the atmosphere and is now stored within the forest ecosystem, mainly within living biomass and soil, and to a lesser extent also in dead wood and litter.

The total carbon stock stored within UK forests is estimated to have increased between 1990 and 2015 (Table 4.1). The carbon stored in forest soils accounts for almost 75% of total forest carbon stock.

Table 4.1 Forest carbon stock

	1990	2000	2005	2010	2015
	million tonnes of carbon dioxide equivalent				
Carbon in above-ground biomass	360	471	527	583	639
Carbon in below-ground biomass	129	170	190	210	230
Carbon in dead wood	9	10	10	10	10
Carbon in litter	165	175	179	182	187
Soil carbon ^{1, 3}	2 366	2 533	2 594	2 629	2 715
Total forest carbon	3 029	3 359	3 500	3 614	3 781

Source: Forestry Commission

Notes

1. Carbon in soil depth 0 to 100 cm.
2. To convert tonnes carbon dioxide equivalent (CO₂e) to tonnes carbon (C), multiply by 12/44.
3. Changes in soil carbon stocks over the period can be attributed to changes in UK forest area.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

4.3 Carbon sequestration

Forest carbon sequestration is the process of increasing the carbon content of the forest through processes that remove carbon dioxide from the atmosphere (i.e. photosynthesis). Once sequestered the carbon is stored in the forest within living biomass, soil and litter and contributes to the forest carbon stock. The forest carbon sink describes the natural reservoir that accumulates and stores sequestered carbon. The forest carbon sink is dynamic and can gain (e.g. sequestration by photosynthesis) and lose (e.g. emission by forest fires) carbon. The forest carbon sink is quantified by measuring the net annual accumulation of carbon (carbon sequestration) by living biomass, soils and litter in forests.

The figures presented in Table 4.2 and Figure 4.2 represent the net annual accumulation of carbon dioxide by UK forests, taking into account carbon emissions due to forest wildfires and deforestation. Therefore, the actual figure for annual accumulation of carbon dioxide by UK forests will be far greater.

The net annual rate of carbon dioxide accumulation by UK forests is projected to fall from around 21 million tonnes CO₂ in total in 2020 to around 19 million tonnes CO₂ by 2030 (Table 4.2 and Figure 4.2).

Under the Kyoto protocol, additional woodland planted since 1990 contributes to the UK's carbon dioxide emissions target. The general trend for the rate of accumulation of carbon in these new woodlands suggests an increase between 1990-2050 as woodland continues to be planted (Table 4.2).

Carbon in harvested wood products are not included in the figures shown in Table 4.2. and Figure 4.2 (but are included in overall greenhouse gas reporting).

Table 4.2 Net annual carbon dioxide sequestered by UK forests, 1990-2050

Year	Carbon sequestered by living biomass	Total (net emissions and removals from forest land)	Carbon sequestered due to land afforested since 1990	Carbon emissions due to land deforested since 1990
million tonnes of carbon dioxide per year				
1990	12.3	15.0	-0.1	-0.2
1995	13.4	17.9	-0.5	-0.2
2000	14.0	19.8	-0.6	-0.8
2005	12.7	20.1	-0.4	-1.1
2010	11.6	21.0	0.4	-1.4
2015	10.9	21.3	1.9	-1.3
2020	10.9	20.5	3.7	-1.1
2025	10.0	20.2	5.5	-1.0

2040	9.5	18.7	8.1	-0.6
2045	9.8	18.9	7.3	-0.6
2050	9.4	18.9	6.6	-0.5

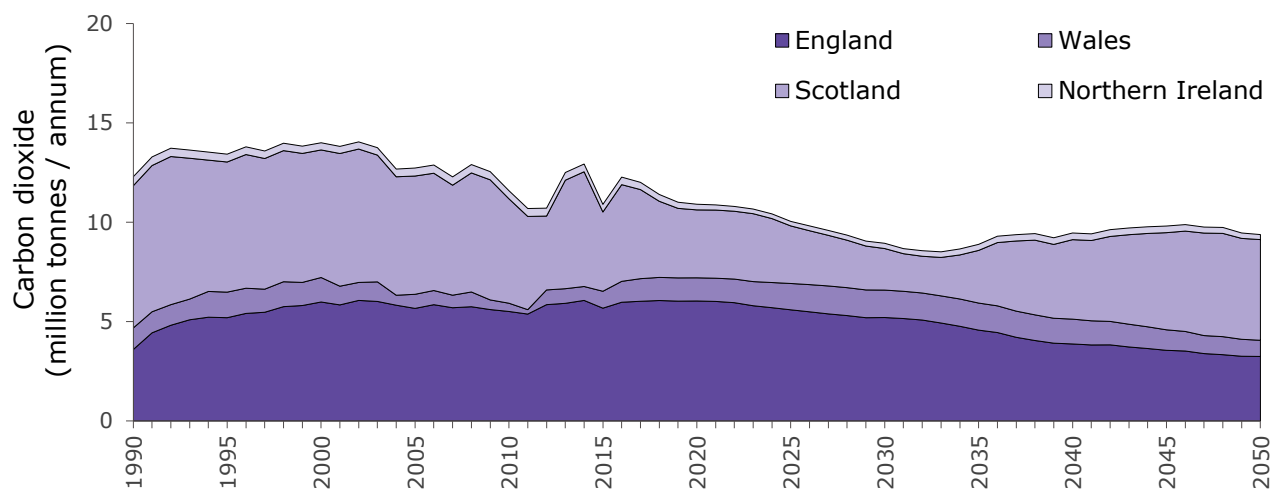

Source: Inventory and projections of UK emissions by sources and removal by sinks due to land use, land use change and forestry, produced by the Centre for Ecology and Hydrology (February 2018).

Notes:

1. Net annual accumulation of carbon in forests by woody biomass, soils and litter. Adjusted for losses from deforestation and forest wildfires. Excludes changes in UK harvested wood products.
2. Emissions and sequestration can be presented as tonnes carbon or tonnes carbon dioxide (CO₂). To convert from tonnes CO₂ to tonnes carbon multiply by 12/44.
3. Future predictions of carbon uptake assume that commercial conifer plantations will be replanted when felled, and that planting of new woodland will follow a central projection whereby planting up to 2020 is determined by the available grant for woodland creation (i.e. policy and funding in place), and after that planting rates drop to 10% of the baseline projection, reflecting the lack of funding beyond the current Rural Development Plan.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

Figure 4.2 Net annual change in carbon (CO₂ equivalent)¹ in UK woodlands

Source: Inventory and projections of UK emissions by sources and removal by sinks due to land use, land use change and forestry, produced by the Centre for Ecology and Hydrology (February 2018).

Notes:

1. Net annual accumulation of living biomass only. Adjusted for losses due to deforestation and forest wildfires. Excludes changes in carbon in litter, soils and UK harvested wood products.
2. Emissions and sequestration can be presented as tonnes carbon or tonnes carbon dioxide (CO₂). To convert from tonnes CO₂ to tonnes carbon multiply by 12/44.
3. Future predictions of carbon uptake assume that commercial conifer plantations will be replanted when felled, and that planting of new woodland will follow a central projection whereby planting up to 2020 is determined by the available grant for woodland creation (i.e. policy and funding in place), and after that planting rates drop to 10% of the baseline projection, reflecting the lack of funding beyond the current Rural Development Plan.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

4.4 Woodland Carbon Code

The Woodland Carbon Code is a voluntary standard, initiated in July 2011, for woodland creation projects that make claims about the carbon they sequester (take out of the atmosphere).

All projects must be placed on the UK Woodland Carbon Registry. Their claims about potential carbon sequestration are validated by an independent certification body. Validated projects are then verified on a regular basis to confirm the progress of carbon sequestration.

Further information on Woodland Carbon Code projects is provided in the Sources chapter and at www.forestry.gov.uk/carboncode

Table 4.3a provides annual and quarterly data on projects registered under the Woodland Carbon Code. The table provides information on the number of projects, area of woodland covered by the projects and the total projected carbon sequestration over the lifetime (up to 100 years) of the projects.

A total of 156 projects had been validated to the Woodland Carbon Code at 31 March 2018, covering almost 5,300 hectares and projected to sequester 2.5 million tonnes of carbon dioxide over their lifetime.

Of the validated projects, 37 were also verified by the end of March 2018. These projects cover almost 1,600 hectares and are projected to sequester 713 thousand tonnes of carbon dioxide over their lifetime.

A total of 239 projects were registered under the Woodland Carbon Code at 31 March 2018, covering over 16,100 hectares of woodland and projected to sequester 5.8 million tonnes of carbon dioxide.

Table 4.3a Woodland Carbon Code projects¹ in the UK

Source: Forestry Commission

Notes:

1. Projects can be validated/ verified individually or come together as part of a group. The statistics presented here show the number of projects validated or verified whether they were put through the process individually or as part of a group.
2. Figures for carbon sequestration indicate the total projected sequestration of the projects over their lifetime of up to 100 years, and include the amount claimable by a project plus the amount allocated to a shared "buffer" in case of unanticipated losses.

Awaiting validation: is when a project or group is undergoing assessment by a certification body.

Validated: is the initial evaluation of a project or group against the requirements of the Woodland Carbon Code. Upon completion a project/group will receive a 'Validation Opinion Statement'. The project/group will then be certified for a period of up to 5 years.

Verified: Verification is the evaluation of a project as it progresses to confirm the amount of CO₂ sequestered to date as well as that it continues to meet the requirements of the Code.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

Together, all validated (including verified) projects were predicted to sequester 1,531 thousand tonnes of carbon dioxide in Scotland, 792 thousand tonnes in England, 177 thousand tonnes in Wales and 3 thousand tonnes in Northern Ireland over their lifetime (Table 4.3b).

Table 4.3b Woodland Carbon Code projects¹ at 31 March 2018

Notes:

1. Projects can be validated/ verified individually or come together as part of a group. The statistics presented here show the number of projects validated or verified whether they were put through the process individually or as part of a group.
2. Figures for carbon sequestration indicate the total projected sequestration of the projects over their lifetime of up to 100 years, and include the amount claimable by a project plus the amount allocated to a shared "buffer" in case of unanticipated losses.

Awaiting validation: is when a project or group is undergoing assessment by a certification body.

Validated: is the initial evaluation of a project or group against the requirements of the Woodland Carbon Code. Upon completion a project/group will receive a 'Validation Opinion Statement'. The project/group will then be certified for a period of up to 5 years.

Verified: Verification is the evaluation of a project as it progresses to confirm the amount of CO₂ sequestered to date as well as that it continues to meet the requirements of the Code.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

4.5 Public Opinion of Forestry - climate change

The Forestry Commission has conducted similar surveys of public attitudes to forestry and forestry-related issues every two years since 1995. The most recent set of separate surveys was conducted in 2017 (in Scotland, Wales, and across the UK as a whole) and 2014 (in Northern Ireland). The full results are available on our website at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/public-opinion-of-forestry/.

Questions were asked to gauge the public's agreement on climate change issues, including on the management of UK forests in response to the threat of climate change (Table 4.4). Some of the public views presented below do not reflect expert opinion.

There were high levels of agreement (respondents stating that they agreed or strongly agreed) with the statements:

- "A lot more trees should be planted", supported by 84% of the UK public in 2017; and
- "Different types of trees should be planted that will be more suited to future climates", supported by 76% in 2017.

Conversely, there were much lower levels of agreement with the statements:

- "No action is needed, let nature take its course", supported by 24% in 2017; and
- "Trees should not be felled under any circumstances, even if they are replaced", supported by 26%.

Table 4.4 Management of UK forests in response to the threat of climate change

	2009	2011	2013	2015	2017
	percent of respondents who agree or strongly agree				
A lot more trees should be planted	92	90	86	80	84
Different types of trees should be planted that will be more suited to future climates	70	74	71	67	76
Trees should not be felled in any circumstances, even if they are replaced	17	21	22	25	26
No action is needed, let nature take its course	16	21	18	22	24

Notes:

1. Figures are based on all respondents: weighted totals = 2009 (2,011), 2011 (2,068), 2013 (1,927), 2015 (1,804), 2017 (2,113).

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

Chapter 5: Environment

Introduction

This chapter presents a range of information about the woodland environment, mostly using sources that are outside the scope of National Statistics. They are included to provide additional context to the topic.

Estimates for England, Wales, Scotland and Northern Ireland are included, where possible, in addition to UK or GB totals. Further information on the data sources and methodology used to compile the figures is provided in the Sources chapter.

All of the statistics presented in this chapter have been previously released.

The statistics on the populations of wild birds (Table 5.1 and Figure 5.1) and woodland fires (Tables 5.2a and 5.2b) have been revised since "Forestry Statistics 2017". For further details on revisions, see the Environment section of the Sources chapter.

A copy of all environment tables is available to download as an Excel spreadsheet from <https://www.forestresearch.gov.uk/tools-and-resources/statistics/data-downloads/>.

Key findings

The main findings are:

- The UK woodland bird index has remained relatively stable since the early 1990s, following a period of long term decline. Most of this decline has occurred in woodland specialist species.
- There were around 4,200 woodland fires in Great Britain in 2016-17, covering an area of around 800 hectares.

5.1 Populations of wild birds

Bird populations provide a good indication of the broad state of wildlife in the UK. This is because they are a well-studied taxonomic group, enabling a more informed interpretation of observed changes, who occupy a range of habitats while still responding to the same environmental pressures that also operate on other groups of wildlife.

Indices of wild bird populations in the UK are produced annually by the Department for Environment, Food and Rural Affairs (Defra) in conjunction with the Royal Society for the Protection of Birds (RSPB), the British Trust for Ornithology (BTO) and the Joint Nature Conservation Committee (JNCC), and cover a range of species that are native to the UK. This data has been produced since the early 1970s for the majority of habitat groups, meaning there is considerable long-term data available on the changes in bird populations, which aids in the interpretation of more short term variation. The latest statistical release on Wild Bird Populations was published in November 2017 and includes data to 2016.

The index for woodland birds was expanded in 2007 to cover 38 species. A further change in 2015 resulted in a reduction to 37 species, of which 12 are generalists and 25 are woodland specialists (those that breed or feed mainly or solely in woodland).

Since the early 1990s, when the majority of species group indices stabilised, the UK woodland bird index has generally been about 20 per cent below the level of the early 1970s, with the decline predominantly in woodland specialist species (Figure 5.1).

Causes for the long term decline in the woodland bird index may include a lack of diversity in habitats and food sources, loss of habitats and food sources through damage caused by increasing deer populations, and a reduction in some migratory species following pressures in other parts of the world.

Table 5.1 UK populations of wild birds

Year	Total breeding birds	Farmland birds	Seabirds	Woodland birds	Woodland generalists	Woodland specialists
	index (year 2000 = 100)					
2007	98.7	90.3	89.0	98.8	105.3	93.8
2008	100.3	92.2	83.5	101.8	104.8	98.3
2009	95.7	89.5	89.4	89.3	97.8	83.1
2010	97.3	86.7	86.5	100.2	101.8	97.1
2011	95.7	86.4	80.8	102.8	98.7	102.8
2012	96.8	87.3	78.0	104.2	102.1	103.2

Notes:

1. Based on data in Wild Bird Populations in the UK, 1970-2016 statistical release (Defra, November 2017).

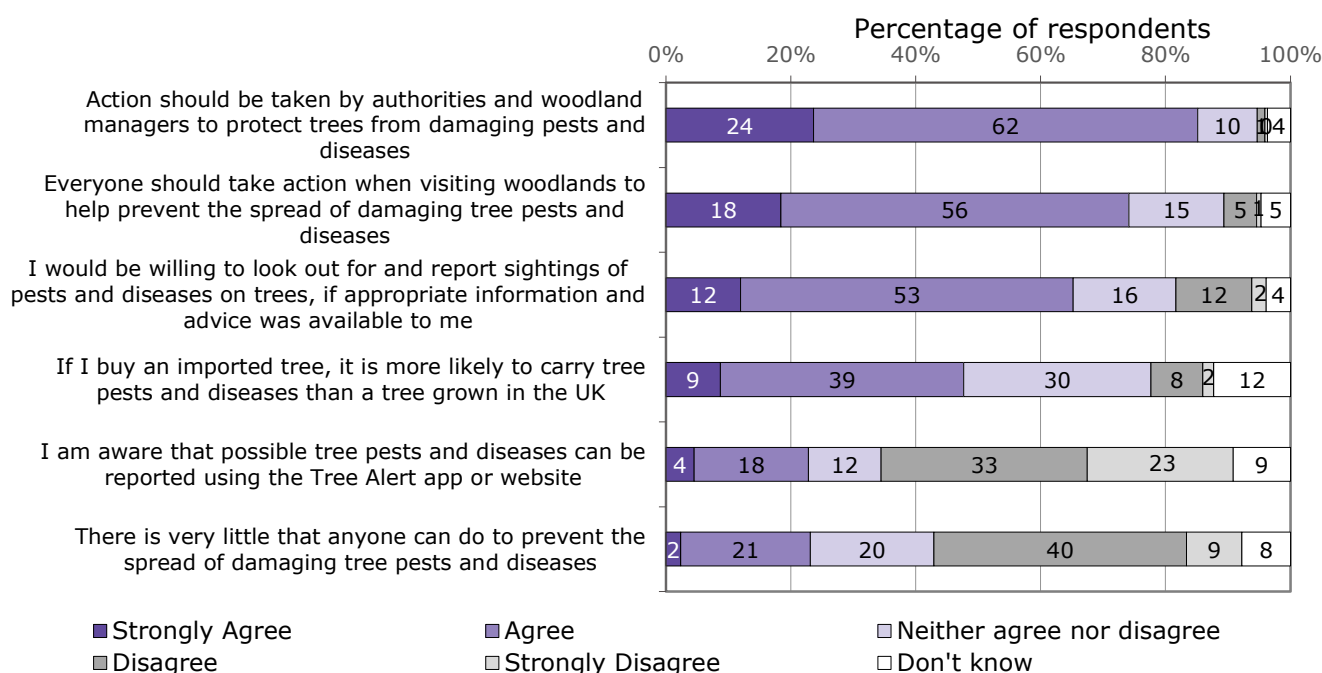

5.2 Public Opinion of Forestry - tree health

The Forestry Commission has conducted similar surveys of public attitudes to forestry and forestry-related issues every two years since 1995. The most recent surveys were conducted in 2017 (with separate surveys in Scotland, Wales, and across the UK as a whole) and in 2014 (in Northern Ireland). The full results are available within the 2017 and 2014 Public Opinion of Forestry reports available on our website at www.forestryresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/public-opinion-of-forestry/.

Questions were introduced in 2013, to gauge the public's views on tree health issues.

Latest results show that the highest level of agreement was seen with the statement "action should be taken by authorities and woodland managers to protect trees from damaging pests and diseases", with 85% of UK respondents in 2017 agreeing (agree or strongly agree) (Figure 5.2). This compares with only 23% agreeing with the statements "there is very little that anyone can do to prevent the spread of damaging tree pests and diseases" and "I am aware that possible tree pests and diseases can be reported using the Tree Alert app or website".

Figure 5.2 Public opinion on tree health

Source: UK Public Opinion of Forestry Survey 2017.

Base: 2,000 UK respondents.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

5.3 Woodland Fires

The Home Office and Devolved Administrations produce estimates of the number and area of wildfires each year, using data recorded by Fire and Rescue Services using the Incident Reporting System. These figures were previously produced by the Department for Communities and Local Government.

By analysing the wildfire data with the National Forest Inventory woodland map, it has been possible to produce estimates of fires that occur within woodlands in Great Britain.

Table 5.2a shows the number of woodland fires in 2010-11 to 2016-17. There has been some fluctuation in the number of woodland fires in Great Britain over this period, with a high of around 9 thousand fires in 2011-12 and a low of around 2,500 in 2012-13. Most fires occurred in England.

The total number of woodland fires in Great Britain in 2016-17 (around 4,200) represents 4% of the total of around 119,000 outdoor fires in Great Britain in 2016-17 (Home Office, Welsh Government, Scottish Government).

Table 5.2a Number of woodland fires

Financial year	England	Wales	Scotland	GB
2010-11	6 182	618	1 186	7 986
2011-12	7 238	620	1 059	8 917
2012-13	1 794	176	484	2 454
2013-14	3 899	383	776	5 058
2014-15	2 360	288	490	3 138
2015-16	3 333	345	1 389	5 067
2016-17	2 570	193	1 423	4 186

Source: Fire & Rescue Service Incident Recording System, National Forest Inventory.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

Table 5.2b shows the area covered by woodland fires between 2010-11 and 2016-17. There was a peak of around 8,700 hectares burnt in 2011-12, with the vast majority of this area occurring in Scotland.

Around 800 hectares of woodland in Great Britain were burnt in 2016-17.

Table 5.2b Area of woodland fires

Financial year	England	Wales	Scotland	GB
				hectares
2010-11	979	167	129	1 276
2011-12	278	416	7 982	8 675

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

Chapter 6: Recreation

Introduction

This chapter contains statistics on:

- the number and profile of visits to all woodlands from household surveys;
- the number and profile of visits to Forestry Commission/ Natural Resources Wales/ Forest Service woodlands from on-site surveys and administrative sources; and
- public access to woodland.

Geographical coverage for recreation statistics varies. Estimates are presented at country level and, where possible, UK or GB totals are included. Further information on the data sources and methodology used to compile the figures is provided in the Sources chapter.

Most of the statistics presented in this chapter have been previously released by other organisations. The latest year figures for day visitors to Forest Service sites in Northern Ireland are published for the first time in this release. Figures for earlier years have not been revised from those previously published. For further details on revisions, see the Recreation section of the Sources chapter.

The frequency with which the estimates in this chapter are updated varies depending on the data sources used. Whilst some of the information presented is now several years old, it represents the latest available data and has been included to provide a more rounded picture of forest recreation in the UK.

Further information on the advantages and disadvantages of household surveys and of on-site surveys is provided in the Recreation section of the Sources chapter.

A copy of all recreation tables is available to download as an Excel spreadsheet from <https://www.forestresearch.gov.uk/tools-and-resources/statistics/data-downloads/>.

Key findings

The main findings are:

- There were an estimated 446 million visits to woodland in England in 2015-16. Walking with a dog was the most commonly reported activity, undertaken on around two thirds of visits in England. (Monitor of Engagement with the Natural Environment 2015-16).
- There were an estimated 90 million visits to woodland in Scotland in 2013. 63% of the Scottish population had visited woodland in the previous 12 months. (Scotland's People and Nature Survey 2013).
- There were an estimated 68 million visits to woodland by Welsh residents in 2014. Walking was the main activity, undertaken on around two thirds of these visits. (Welsh Outdoor Recreation Survey 2014).
- Around three fifths (61%) of the UK population have visited woodland in the last few years. (UK Public Opinion of Forestry Survey 2017).
- Around 10.2 million visits were made to Forestry Commission Scotland woodlands in 2016. (All Forests Surveys).
- Around 509 thousand people visited Forest Service sites where a charge is made in Northern Ireland in 2017-18.
- Around one fifth (21%) of the UK population lived close to woodland (within 500 metres of a wood of 2 hectares or more) in 2016. (Space for People).

6.1 Visits to woodland - household surveys

The information shown below in Table 6.1 has been obtained from the following general population household surveys.

- UK Day Visits Surveys (1994, 1996, 1998)
- GB Day Visits Survey (2002/3)
- Scottish Recreation Survey (2004 to 2012)
- England Leisure Visits Survey (2005)
- Welsh Outdoor Recreation Survey (2008, 2011, 2014)
- Monitor of Engagement with the Natural Environment (England, 2009-10 onwards)
- Scotland's People and Nature Survey (2013)

It is likely that differences in survey design and methodology have contributed to a considerable proportion of the differences in results between these surveys. The figures in Table 6.1 should not be interpreted as time trends but instead as separate results from each survey. Further information on the differences between surveys is provided in the Recreation section of the Sources chapter.

In common with all sample based surveys, the results from each survey are subject to the effects of chance, depending on the particular survey method used and the sample achieved, thus confidence limits apply to all results from these surveys.

Results from the Monitor of Engagement with the Natural Environment 2015-16 estimate a total of 446 million visits to woodlands in England (Table 6.1). This is not significantly different from the 2014-15 figure.

The Welsh Outdoor Recreation Survey 2014 estimates a total of 68 million visits to woodlands by Welsh residents. This is a statistically significant decrease from the estimated total of 86 million in 2011, but similar to the 2008 estimate (64 million).

Scotland's People and Nature Survey 2013 reports an estimated total of 90 million visits to woodlands in Scotland. This is a statistically significant increase from the 2012 estimate of 62 million visits from the Scottish Recreation Survey. This increase is partly the result of applying a new population estimate in the calculation of total visits for 2013.

Notes:

1. The UK and GB Day Visits Surveys collected data about day trips from home, for all countries of GB. The 1994, 1996 and 1998 surveys covered calendar years; the 2002-03 survey covered a 12-month period starting in March 2002.

2. ELVS and MENE covered trips taken in England, including those from holiday bases, by respondents living in England. ELVS ran for 12 months from February 2005. MENE results relate to 12 month periods from March to February.

3. The Welsh Outdoor Recreation Survey totals shown are for trips with woodland as the main destination.

4. The Scottish Recreation Survey ran from July 2003 until December 2012. It was replaced by Scotland's People and Nature Survey that ran from March 2013 to February 2014. Both surveys covered visits to the outdoors for leisure and recreation in Scotland by people living in Scotland. The total shown is for all trips that included a visit to woodland.

5. In each survey, visits to overseas destinations are excluded.

.. Denotes data not available.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

6.1.1 England

Household surveys in England

In March 2009 fieldwork commenced on the Monitor of Engagement with the Natural Environment (MENE) survey, which includes collecting information on visits to the outdoors in England. Further information on the survey, including copies of annual reports and online data viewers to access more detailed results, is available at

www.gov.uk/government/collections/monitor-of-engagement-with-the-natural-environment-survey-purpose-and-results

Table 6.2 shows the main characteristics of visits to woodlands over the most recent 5 years. In 2015-16, around two thirds of visits to woodland involved walking with a dog and around one quarter involved other walking. Walking was the main mode of transport for around three fifths of visits to woodland. Around three fifths of visits to woodland were within 2 miles.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

6.1.2 Scotland

Household surveys in Scotland

Scotland's People and Nature Survey (SPANS), which measures and collects details about the Scottish adult population's participation in outdoor recreation in Scotland, ran from March 2013 until February 2014, with 1,000 adults interviewed in their home each month. The survey replaced the previous Scottish Recreation Survey (ScRS).

Further information on SPANS and the ScRS, including copies of annual reports and online data viewers to access more detailed results, is available from the Scottish Natural Heritage website at www.snh.gov.uk/land-and-sea/managing-recreation-and-access/increasing-participation/measuring-participation/

Table 6.3 shows the frequency of visits to woodland by the Scottish adult population in the previous 12 months.

63% of respondents had visited woodland at least once in the previous year. This compares with results from the Scotland Public Opinion of Forestry Survey (table 6.5), showing that 76% of respondents to the 2013 survey had visited woodland in the last few years.

Around one third (34%) of respondents had visited woodland at least once a month in the previous 12 months.

Table 6.3 Frequency of visits to woodland¹ - Scotland

Frequency	2013-14
	per cent of respondents
At least once a week	18

Base: 6,042 respondents.

Note:

1. All trips that include a visit to woodland.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

6.1.3 Wales

Household surveys in Wales

Natural Resources Wales and its predecessors (Countryside Council for Wales and Forestry Commission Wales) commissioned a Welsh Outdoor Recreation Survey (WORS) in 2008, 2011 and 2014. The survey provides data on Welsh residents' participation in informal outdoor activities and visits to the outdoors, including woodland. Further information on the survey, including copies of reports and data tables, is available at naturalresourceswales.gov.uk/evidence-and-data/research-and-reports/national-survey-for-wales/?lang=en.

Table 6.4 shows the main characteristics of recreation visits where the main destination of visit was woodland, from the Welsh Outdoor Recreation Surveys. Walking was reported as the main activity in around two thirds of visits to woodland. Car or van was the main mode of transport for around three fifths of visits to woodland. Around one quarter of visits to woodland in 2014 were within 1 mile and around one third were for less than two hours. Respondents were accompanied by a dog in around one half of visits to woodland.

Table 6.4 Woodland visit characteristics¹- Wales, 2008, 2011 & 2014

Notes:

1. Visits where the main destination was woodland.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

6.1.4 Public Opinion of Forestry Survey - Woodland visitors

Public Opinion of Forestry survey - Woodland visitors

The Public Opinion of Forestry Survey is carried out every two years and obtains people's attitudes to forestry and forestry-related issues, including visits to woodland. Copies of reports and detailed data tables are available at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/public-opinion-of-forestry/.

The results shown in Tables 6.5 and 6.6 and Figure 6.1 have been taken from the UK and country reports on the latest surveys in 2017 and from surveys in earlier years. The reports also include other recreation-related results, such as whether the woodlands visited were in towns or the countryside and any reasons given by survey respondents for not visiting woodlands.

In the UK 2017 survey, three fifths (61%) of respondents said that they had visited woodland in the last few years for walks, picnics or other recreation (Table 6.5).

Table 6.5 Woodland visitors¹

Year	England	Wales	Scotland	Northern Ireland	UK
per cent of respondents					
2003	66	62	64	77	67
2005	65	69	50	67	65

Source: UK/GB, Scotland, Wales and Northern Ireland Public Opinion of Forestry Surveys

Base: UK/GB = 4,000 respondents (2003 to 2007), 2,000 respondents (2009 to 2017);

Scotland and Wales = 1,000 respondents each;

Northern Ireland = 120 respondents (2003), 1,000 respondents (2005 to 2014).

Notes:

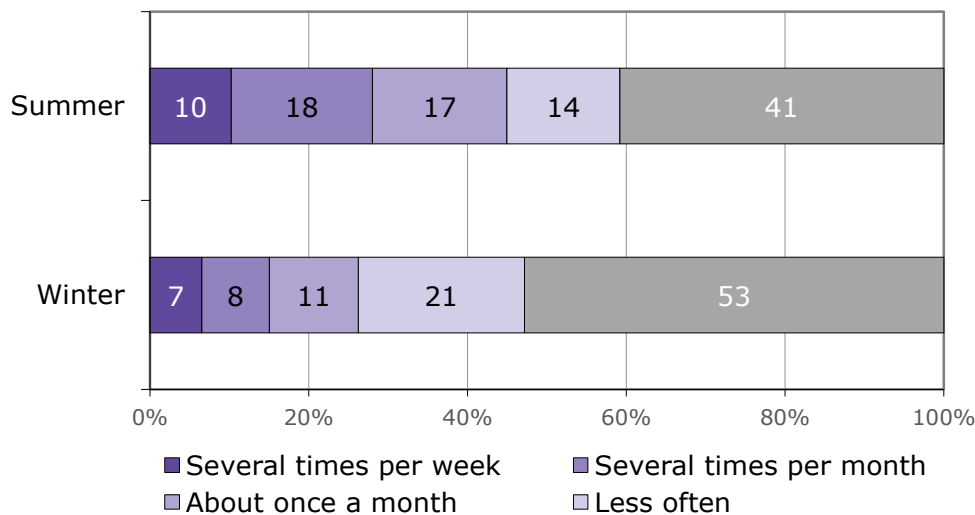

1. Those stating that they had visited woodland in the last few years.

.. Denotes data not available (survey not run that year or question not asked)

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

Survey respondents were asked how frequently they had visited during the previous summer and winter. Figure 6.1, which presents aggregated UK results for the 2013 to 2017 surveys, shows that respondents visited much more often during the summer, with 45% of respondents visiting at least once a month in the summer compared to around one quarter (26%) in the winter.

Figure 6.1 Frequency of visits to woodlands

Source: UK Public Opinion of Forestry Surveys, 2013 to 2017.

Base: Average visit frequencies from last three UK surveys: 2,000 respondents per survey.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

6.1.5 Public Opinion of Forestry Survey - woodland visitors by age group

Public Opinion of Forestry surveys - woodland visitors by age group

In the UK 2017 Public Opinion of Forestry survey, around two thirds (68%) of respondents aged 35 to 54 said that they had visited woodland in the last few years for walks, picnics or other recreation (Table 6.6). This compares with around three fifths of respondents aged 16 to 34 (60%) and aged 55 or over (55%).

Table 6.6 Woodland visitors¹ by age group

Year	Aged 16 to 34	Aged 35 to 54	Aged 55 and over	Total

Base: 2,000 respondents (1999, 2001, 2009 to 2017); 4,000 respondents (2003 to 2007).

Notes:

1. Those stating they had visited woodland in the last few years.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

6.2 Visits to woodland - on-site surveys

The previous section provided information on visits to all woodlands (regardless of ownership), based on data from household surveys. This section provides information on visits to Forestry Commission/ Natural Resources Wales/ Forest Service woodland only, based on data from on-site surveys and administrative sources.

The information provided in this section covers:

- Visits to the National Forest Estate in Scotland (Forestry Commission Scotland woodlands) from the All Forests Scotland surveys run from 2004 to 2007 and in 2012-13. An updated estimate of total visits in 2016 is also provided.
- Day visitors to Northern Ireland Forest Service sites where an admission charge was made.

Further information on these and other sources of on-site visit data are available from the Sources chapter and from the recreation statistics web pages at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/recreation-statistics/.

6.2.1 Scotland All Forests Survey

On site surveys - Scotland All Forests surveys

All Forests surveying in Scotland has been undertaken on two occasions. The first All Forests Survey in Scotland was carried out across a three-year period from June 2004 to June 2007, with over 5,000 hours of fieldwork undertaken over 1,158 days, achieving almost 2,700 face to face interviews. The study estimated that around 8.2 million visits are made annually to Forestry Commission Scotland (FCS) woodland. An estimated 150-200 thousand visits to events in forests and around 300 thousand visits during the hours of darkness (when fieldwork was not undertaken) were also made, giving an overall total of around 8.7 million visits per year.

The second All Forests Survey was carried out from November 2012 to October 2013. The survey made greater use of data from automatic counters, but also achieved over 400 days of fieldwork and 1,970 face-to-face interviews.

The 2012-13 survey estimated an annual total of 9.1 million visits (including visits to events and in the hours of darkness) to Forestry Commission Scotland (FCS) woodland. This represents a 5% increase on the estimated overall total of 8.7 million visits from the 2004-2007 survey.

The estimated number of visits has been updated using data from 224 automatic counters at 165 sites. For sites without counters, estimates have been produced using the results from the 2012-13 All Forests Survey and advice from local managers. This gives an overall estimate of 10.2 million visits to Forestry Commission Scotland (FCS) woodland in 2016, a 12% increase from 2012-13.

Table 6.7 provides a summary of the key characteristics and results obtained from the Scotland All Forests surveys and appears to show some change in visit characteristics over time, with a general trend towards longer, more distant and less frequent visits. From the 2012-13 survey, around two thirds of visitors to Forestry Commission Scotland woodlands were on a day trip from home. Walking (with or without a dog) was the main activity undertaken by around three quarters of visitors. Over four fifths travelled to the site by car or van and around one third travelled more than 15 miles to get to the site. Around one third of visitors were on short trips, spending one hour or less in the forest. Around one half of respondents visited the site at least monthly.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

6.2.2 Northern Ireland Forest Service day visitors

Day visitors to Northern Ireland Forest Service sites

Information on visitors to Forest Service sites in Northern Ireland is provided by the Forest Service and relates only to sites where an admission charge is made.

In Northern Ireland in 2017-18, 509 thousand people visited those Forest Service sites where an admission charge was made (Table 6.8). This represented a 13% decrease from the previous year, but remained higher than the level in earlier years.

Table 6.8 Day visitors to Northern Ireland Forest Service sites¹

Year	Visitors to Forest Service sites
	thousands

2017-18	509

Source: Forest Service

Notes:

Number of people visiting sites where an admission charge was made, excluding campers.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

6.3 Public access to woodland

The Woods for People project (led by the Woodland Trust) has created a UK-wide provisional inventory of accessible woodland.

As a result of the information gathered on accessible woodland, the Woodland Trust has undertaken a major analysis of woodland access provision and deficit across the UK. This project, named Space for People, has used the accessible woodland data from the Woods for People project to develop targets for increasing woodland access.

Further information on the Woodland Trust is available at www.woodlandtrust.org.uk.

6.3.1 Woods for People

Woods for People

The Woods for People project has created a UK-wide provisional inventory of accessible woodland.

At present, it does not include woodlands where the only access is on public rights of way. For Scotland, the Land Reform Act gives a right of responsible access to almost all land, but the dataset only includes woods that encourage access. Table 6.9 shows the proportions of woodland with public access (permissive) as identified by the Woods for People database.

The changes between versions of the dataset (2004 to 2014) are the result of several factors, including the development of the database between versions as areas are updated by land owners; one significant change was a reduction in England and Wales as a result of a fall in the amount of Walkers Welcome data. More recently, the exclusion of areas where access is constrained in England has led to a decrease in accessible woodland in 2011.

Around one half (50%) of the UK woodland area was identified as being publicly accessible in 2014 (Table 6.9).

Table 6.9 Woods for People: Publicly accessible woodland

Year	England	Wales	Scotland	Northern Ireland	UK
	per cent of all woodland area ¹				
2004 ²	37	49	57	66	49
2006	32	39	58	64	46
2007	34	40	58	64	47
2008	34	40	58	64	48
2009	37	42	59	64	49
2010	39	42	59	64	50
2011	35	42	58	65	48
2012	36	43	58	66	49
2013	38	43	58	66	50
2014	38	43	59	66	50

Source: Woods for People (Woodland Trust)

Notes:

1. The total woodland area estimated in 2004 for the Woods for People project, not updated for later reports. This differs from the area shown elsewhere in Forestry Statistics for 2004 to 2014.
2. The 2004 data are from version 1 of the Woods for People project, re-analysed in September 2007 to count only woodland areas. The higher results originally presented in the 2004 Woodland Trust Spaces for People report were based in part on total land areas, rather than woodland areas.
3. Data for 2006 to 2014 are from versions 3 to 11 of the Woods for People dataset, based on woodland areas.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

6.3.2 Space for People

The Woodland Trust has undertaken a major analysis of woodland access provision and deficit across the UK. This project, named "Space for People", has used the accessible woodland data from the Woods for People project to develop targets for increasing woodland access.

The Space for People analysis proposes a Woodland Access Standard for people to have access to a woodland of an adequate size near to where they live. The Space for People report estimates the proportion of the population with access to nearby woods, the extent to which this could be increased by improving access and the amount of new woodland that would have to be created to give the rest of the population this level of access.

In 2016 around one fifth (21%) of the UK population lived within 500 metres of an accessible wood⁴ of 2 hectares or more and almost three quarters of the UK population (73%) lived within 4 kilometres of a larger accessible wood (of 20 hectares or more) (Table 6.10). If inaccessible woodlands¹ had been open to the public in 2016 then an additional 34% of the UK population would have had access to woodland of 2 hectares or more within 500m of where they live and a further 15% of the UK population would have access to woodland of 20 hectares or more within 4km of where they live (see Space for People: Targeting action for woodland access, *Woodland Trust*, May 2017).

Table 6.10 Space for People: Publicly accessible woodland¹

% of population with access to:	England	Wales	Scotland	Northern Ireland	UK
	per cent				
2 ha or more wood within 500 metres					
2004	10.2	15.7	15.3	7.5	10.8
2009	14.5	17.4	27.8	7.2	15.6
2012	16.8	22.8	32.2	7.2	18.2
2016	18.0	23.6	32.4	10.3	21.1
20 ha or more wood within 4 km					
2004	55.2	72.3	54.4	50.3	55.8
2009	63.0	76.7	83.0	40.2	64.8
2012	65.8	80.8	86.9	40.2	67.6
2016	67.9	80.6	86.4	56.1	72.8

Source: Space for People: Targeting action for woodland access, Woodland Trust (2010, 2015, 2017).

www.woodlandtrust.org.uk/publications/2017/06/space-for-people-2017/.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

⁴ Accessible woodland: is defined by the Woodland Trust as 'any site that is permissively accessible to the general public for recreational purposes'. This includes sites with unrestricted open access and restricted, but permissive, access (e.g. fee-payable, fixed-hours access). The definition does not include woods served only by public rights of way. For further information on the definition refer to the source.

Chapter 7: Employment & Businesses

Introduction

This chapter contains information on:

- employment in forestry and wood processing;
- health & safety; and
- numbers of businesses.

All of the statistics presented in this chapter relate to UK totals. Further information on the data sources and methodology used to compile the figures is provided in the Sources chapter.

Most of the statistics presented in this chapter have been previously released. Some of the figures on health and safety (Table 7.3 and Figure 7.1) and on numbers of businesses (Table 7.4) have been revised since Forestry Statistics 2017. For further details on revisions, see the Employment section of the Sources chapter.

A copy of all Employment & Businesses tables is available to download as an Excel spreadsheet from www.forestresearch.gov.uk/tools-and-resources/statistics/data-downloads/.

Key findings

The main findings are:

- The Annual Business Survey reported average employment¹ in 2016 of 17 thousand in forestry and 27 thousand in primary wood processing.
- There was estimated to be a total of 7.8 thousand full time equivalent staff employed¹ by primary wood processors in the UK in 2017, a 1% increase from the total for 2016.
- Accident rates in forestry and wood products have tended to decline in recent years, but are still higher than the averages in agriculture and manufacturing respectively.
- There were 222 establishments in the primary wood processing industries in the UK using UK-grown roundwood in 2017.

Note:

1. There are a number of differences in the scope of the employment figures reported from the Annual Business Survey (ABS) and the full time equivalent figures obtained from the annual surveys of the UK timber industry run by Forest Research (FR). In particular, the ABS figures cover employment by all businesses in the relevant sectors that pay VAT and/ or PAYE. This will include businesses that do not use UK grown timber. The FR surveys include businesses below the VAT and PAYE thresholds, but exclude businesses that do not use UK grown timber.

7.1 Employment: Annual Business Survey (ABS)

The Annual Business Survey (ABS), carried out by the Office for National Statistics (ONS), includes statistics on employment broken down by Standard Industrial Classification (SIC 2007). In wood processing, SIC 16 (wood products) and SIC 17 (pulp, paper and paper products) have a much wider scope than the data on employment in primary wood processing (Table 7.2), as they include primary processing of imported material and also some secondary processing.

The latest ABS survey was published in May 2018 and includes data to 2016. It recorded average employment in 2016 of 17 thousand in forestry and 27 thousand in primary wood processing (sawmilling, panels and pulp & paper) (Table 7.1).

Table 7.1 Employment in forestry and wood processing², 2012-2016

Standard Industrial Classification (SIC) ¹	2012	2013	2014	2015	2016

Total primary wood processing	26	26	27	26	27

Source: Annual Business Survey - average employment in year (Office for National Statistics, May 2018)

Notes:

1. Categories are based on the [UK Standard Industrial Classification \(SIC 2007\)](#) categories. Further details on the SIC codes used are provided in the Sources: Employment and businesses page.
2. Excludes other wood-using industries.
3. Pulp and paper breakdowns for 2012 to 2016 have been suppressed in the figures released by ONS. The figures shown here are estimated from 2008 figures.

7.2 Employment in primary wood processing

Information on employment in primary wood processing is obtained annually via the sources used to collect data on UK-grown timber (presented in Chapter 2).

There was estimated to be a total of 7.8 thousand full time equivalent staff employed by primary wood processors in the UK in 2017 (Table 7.2), a 1% increase from the total for 2016.

Around three fifths (59%) of the total employment in 2017 worked in sawmills and over one quarter (27%) worked in wood-based panel mills.

Table 7.2 Employment in primary wood processing, 2013-2017

Year	Sawmills	Pulp & paper	Wood-based panels	Fencing	Total
full-time equivalents					
2013	4 133	716	2 111	381	7 342
2014	4 382	703	2 091	407	7 583
2015	4 319	702	2 100	361	7 483
2016	4 450	697	2 250	388	7 785
2017	4 593	700	2 110	427	7 830

Source: industry surveys, industry associations.

Notes:

1. Some businesses operate sawmills and round fencing mills. Employment for such businesses may be recorded under sawmills, round fencing manufacturers or shared between the two categories.

7.3 Health & safety

From April 2012, accidents involving absence from work of at least seven days are required to be reported to the Health & Safety Executive (HSE). Prior to this time, reporting was required for absences of at least three days.

The latest accident rates, for 2016-17, show an increase from the previous year for the forestry and wood products sectors. Over the longer term, the rates for both sectors have generally declined, but they continue to remain higher than the averages in agriculture and manufacturing respectively (Table 7.3 and Figure 7.1).

Table 7.3 Accidents to employees¹ in forestry and wood processing³, 2012-13 - 2016-17

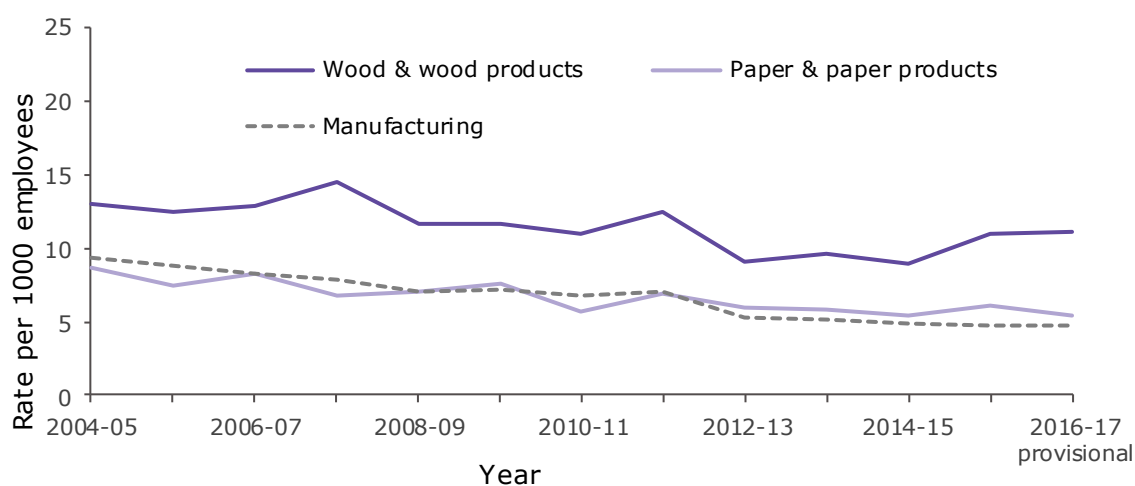

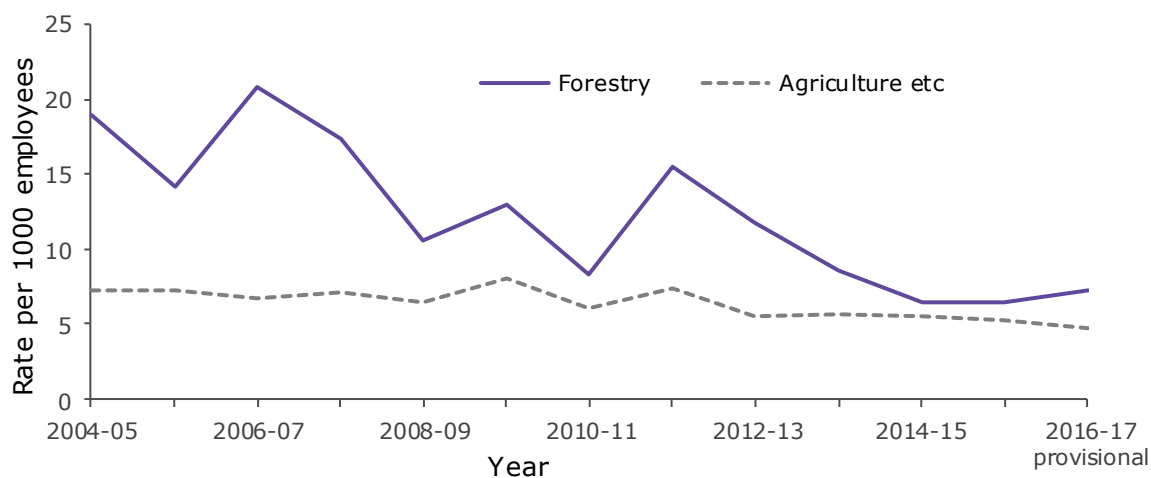

Standard Industrial Classification (SIC) ²	Major Accidents ⁴		Total Reported	
	Number	Rate/ 1000 employees	Number	Rate/ 1000 employees
Forestry				
2012-13	54	5.1	125	11.8
2013-14	51	3.8	116	8.6
2014-15	26	1.7	101	6.5
2015-16	34	2.0	111	6.5
2016-17 provisional	31	1.9	120	7.3
Wood products				
2012-13	141	2.6	491	9.0
2013-14	155	2.9	523	9.6
2014-15	136	2.4	510	8.9
2015-16	129	2.5	561	10.9
2016-17 provisional	150	3.0	557	11.1
Pulp, paper & paper products				
2012-13	76	1.4	323	5.9
2013-14	85	1.5	322	5.8
2014-15	75	1.3	303	5.4
2015-16	67	1.4	284	6.1
2016-17 provisional	70	1.5	255	5.4

Source: Health & Safety Executive.

Notes:

1. Employees only; excludes self-employed.
2. Categories are based on the [UK Standard Industrial Classification](#) (SIC 2007) categories. Further details on the SIC codes used are provided in the Sources: Employment and businesses page.
3. Excludes other wood-using industries.
4. Major accidents include fatal accidents, which averaged around 1 per year for forestry and 2 per year for wood processing. There were no fatal accidents in the period shown for pulp, paper and paper products.

Figure 7.1 Accidents to employees: Total reported accidents per 1000 employees, 2004-05 to 2016-17

Source: Health & Safety Executive.

Notes:

1. Employees only; excludes self-employed.
2. Categories are based on the [UK Standard Industrial Classification](#) (SIC 2007) categories. Further details on the SIC codes used are provided in the Sources: Employment and businesses page.
3. As a result of a change in reporting requirements, data from 2012-13 is not directly comparable with previous years.

7.4 Establishments in the primary wood processing industries

Table 7.4 shows the number of primary wood processors, according to the sampling frames used for Forestry Commission surveys of establishments using UK timber.

The figures in Table 7.4 do not correspond with the VAT and PAYE registration information given in Table 7.5. The figures here count establishments (sites) rather than businesses and include those that do not need to register for VAT or PAYE. They also have a different basis for classification, so some businesses that are excluded from Table 7.5 because of their VAT/PAYE classification are included in this table (typically businesses where primary wood processing is a small part of their total activity), and some businesses included in Table 7.5 are excluded here (usually because they do not use UK-grown timber).

The number of establishments in the primary wood processing industries using UK-grown roundwood has reduced from 274 in 2008 to 222 in 2017, a 19% decrease.

Table 7.4 Number of establishments in the primary wood processing industries using UK-grown roundwood

Year	Sawmills	Pulp & paper mills	Wood-based panel mills	Round fencing manufacturers	Total ¹
2008	197	2	8	67	274
2009	195	2	8	68	273
2010	188	2	7	65	262
2011	184	2	7	64	257
2012	180	2	7	61	250
2013	175	2	6	61	244
2014	173	2	6	57	238
2015	171	2	6	51	230
2016	167	2	6	51	226
2017	164	2	6	50	222

Source: industry surveys, industry associations

Notes:

1. A single mill may be recorded twice, as a sawmill and a round fencing manufacturer.

7.5 VAT and/or PAYE registered businesses

Table 7.5 shows the number of VAT and/or PAYE registered businesses classified under forestry and primary wood processing. The headings shown potentially include businesses not traditionally regarded as forestry or primary wood processing, and some businesses traditionally included in forestry and primary wood processing are excluded as they are classified to other headings of the Standard Industrial Classification (SIC).

A total of 4,060 forestry businesses, 540 sawmilling businesses, 120 wood-based panel businesses and 240 pulp & paper businesses were registered for VAT and/or PAYE purposes in the UK in 2017.

There has been an overall increase in forestry businesses over the last ten years, whilst sawmilling, panels, and pulp and paper businesses have declined.

Table 7.5 Number¹ of VAT and/or PAYE registered businesses by Standard Industrial Classification (SIC)², 2008-2017

Year	Forestry	Sawmilling	Panels	Pulp & paper
2008	3 020	730	140	310
2009	3 100	685	130	270
2010	3 095	640	135	255
2011	3 170	605	135	250
2012	3 375	585	135	255
2013	3 505	560	130	240
2014	3 685	555	130	230
2015	3 925	555	125	230
2016	4 050	550	125	225
2017	4 060	540	120	240

Source: UK Business: Activity, Size and Location: 2017 (Office for National Statistics, October 2017).

Notes:

1. All figures are rounded by the Office for National Statistics (ONS) to the nearest multiple of 5.
2. Categories are based on the [UK Standard Industrial Classification \(SIC\)](#) categories. 2008 data are based on SIC 2003; 2009-2017 data are based on SIC 2007. Given the changes in classifications, the time series may not be fully consistent. Further details on the SIC codes used are provided in the Sources: Employment and businesses page.

Chapter 8: Finance & Prices

Introduction

This chapter contains statistics on:

- timber prices;
- financial returns from forestry investment;
- gross value added (GVA);
- Government expenditure on forestry; and
- grant schemes.

Estimates for England, Wales, Scotland and Northern Ireland are included, where possible, in addition to UK or GB totals. Further information on the data sources and methodology used to compile the figures is provided in the Sources chapter.

Most of the statistics presented in this chapter have been previously released. Some of the figures for earlier years have been revised since Forestry Statistics 2017. For further details on revisions, see the Finance & Prices section of the Sources chapter.

A copy of all Finance & Prices tables is available to download as an Excel spreadsheet from <https://www.forestresearch.gov.uk/tools-and-resources/statistics/data-downloads/>.

Key findings

The main findings are:

- The Coniferous Standing Sales Price Index for Great Britain was 28.2% higher in real terms in the year to March 2018, compared with the previous year.
- The Softwood Sawlog Price Index was 18.8% higher in real terms in the 6 months to March 2018, compared with the corresponding period of the previous year.
- The Investment Property Databank (IPD) UK Forestry Index shows a total return of 11.6% per annum for the three year period 2015 to 2017, and an annual return of 13.9% for 2017.
- Gross value added (GVA) in primary wood processing (sawmilling, panels and pulp & paper) was £1.52 billion in the UK in 2016. GVA in forestry was £0.59 billion.
- Net expenditure on public forests by the Forestry Commission totalled £40 million in 2017-18. A further £92 million was spent by the Forestry Commission on other activities.
- A total of £56.1 million was paid in grants by the Forestry Commission and the Welsh Government in 2017-18.

8.1 Timber prices

Timber Price Indices are based on sales of softwood (conifers) by the Forestry Commission and Natural Resources Wales and are released every 6 months. They cover:

- Sales in England and Scotland by the Forestry Commission; and
- Sales in Wales by the Forestry Commission to 31 March 2013 and by Natural Resources Wales from 1 April 2013.

The Coniferous Standing Sales Price Index monitors changes in the average price received per cubic metre for timber that the Forestry Commission/ Natural Resources Wales sold standing, where the purchaser is responsible for harvesting.

The Softwood Sawlog Price Index monitors changes in the average price received per cubic metre of sawlogs (roundwood with a top diameter of 14 cm or more, destined to be sawn into planks or boards) sold at roadside by the Forestry Commission/ Natural Resources Wales.

The Softwood Sawlog Price Index was revised in May 2017 to correct a number of inconsistencies in the coverage of the underlying data. A further change was made in November 2017, to extend the coverage of the revised index. Further details are available in the relevant editions of the National Statistics First Release on Timber Price Indices, available at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/timber-statistics/timber-price-indices/.

Standing timber and sawlogs are distinct markets, and may show different price movements. The data are averages for historic periods, so may be slow to show any turning points.

These indices are used to monitor trends in timber prices and to provide information on the state of the UK timber industry. They are also used by the UK timber industry, alongside other economic indicators, in contract reviews.

There is little other information currently available on wood prices before primary processing and no price index is available for broadleaves. Prices for outputs of primary wood processing are collected by the Office for National Statistics (ONS) in the Producer Price Indices (PPIs), and these are available in the MM22 dataset which gives detailed PPIs monthly.

Table 8.1 presents the coniferous standing sales and sawlog price indices for Great Britain to March 2018.

The coniferous standing sales price index for Great Britain was 28.2% higher in real terms in the year to March 2018, compared with the previous year (Table 8.1). The softwood sawlog price index was 18.8% higher in real terms in the 6 months to March 2018, compared with the corresponding period in the previous year.

Table 8.1 Coniferous standing sales and sawlog price indices¹ for Great Britain, 2012-2018

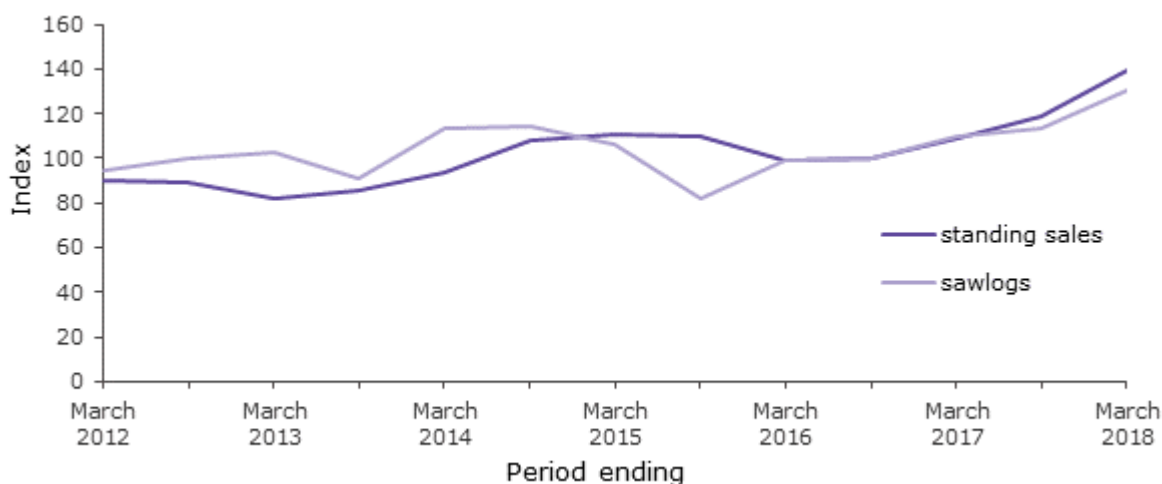

Period ending March	Standing sales ²		Sawlogs	
	Nominal terms ³	Real terms ⁴	Nominal terms ³	Real terms ⁴
	index (period to September 2016 = 100)			
2012	83.9	89.7	88.2	94.6
2013	78.6	82.3	97.9	102.6
2014	90.9	93.6	109.5	113.2
2015	108.8	110.4	103.2	105.8
2016	98.5	99.3	97.1	98.6
2017	110.0	108.5	110.8	109.6
2018	143.5	139.1	133.9	130.2

Source: Timber Price Indices: data to March 2018

Notes:

1. The price indices are constructed from information on sales by the Forestry Commission/ Natural Resources Wales only.
2. The standing sales index uses the Fisher method with 5 year chain linking to take account of changes in the size mix over time.
3. Nominal prices are the actual prices at that point in time.
4. Real terms values are obtained by using the GDP deflator to convert to "constant prices" (in this case prices in 2016). This allows trends in timber prices to be tracked without the influence of inflation.
5. The standing sales index excludes sales by Natural Resources Wales from April 2017.
6. Sawlog prices in Wales in the year to March 2018 include long term contract rates for the clearance of infected larch.

Figure 8.1 Coniferous standing sales and sawlog price indices^{1,2} in real terms³, 2013-2018

Source: Timber Price Indices: data to March 2018

Notes:

1. The price indices are constructed from information on sales by the Forestry Commission/ Natural Resources Wales only.
2. The standing sales index uses the Fisher method with 5 year chain linking to take account of changes in the size mix over time.
3. Real terms values are obtained by using the GDP deflator to convert to "constant prices" (in this case prices in 2016). This allows trends in timber prices to be tracked without the influence of inflation.
4. The standing sales index excludes sales by Natural Resources Wales from April 2017.
5. Sawlog prices in Wales in the year to March 2018 include long term contract rates for the clearance of infected larch.

8.2 Financial return from forestry investment

Returns to investors in forestry are made up of sales of timber (standing or felled), sales of other goods and services, increases in the value of the woodland (from annual increment or market factors), and the net income from subsidies (e.g. planting grants) less taxes. The investors' costs are made up of employment costs and other purchases.

Estimates of the overall return from commercial forestry are produced annually in the Investment Property Databank (IPD) UK Forestry Index, available at www.msci.com/www/ipd-factsheets/ipd-uk-annual-forestry-index/0163322597. The index is calculated from a sample of around 150 private sector coniferous plantations of predominantly Sitka spruce in mainland Britain. The IPD UK Forestry Index is outside the scope of National Statistics.

The index shows a total return of 11.6% per annum for the three year period 2015 to 2017, and an annual return of 13.9% for 2017 (Table 8.2).

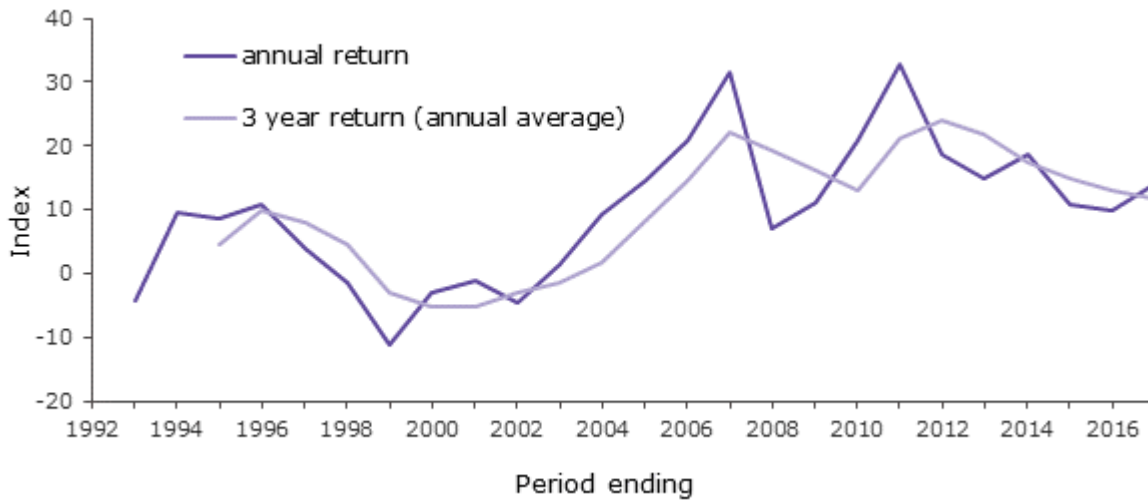

Table 8.2 IPD UK Forestry Index: Returns from forestry, 2008-2017

Period ending	Index (1992=100)	Annual % return	3 year return (annual average %)
2008	226.5	7.1	19.3
2009	251.9	11.2	16.1
2010	304.2	20.8	12.9
2011	404.2	32.9	21.3
2012	479.6	18.6	23.9
2013	551.2	14.9	21.9
2014	653.6	18.6	17.4
2015	725.2	10.9	14.8
2016	797.0	9.9	13.1

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

Figure 8.2 IPD UK Forestry Index: Returns from forestry

Source: IPD UK Forestry Index

Note:

1. Data collected for the IPD UK Forestry Index started in 1992

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

8.3 Gross value added

Gross value added (GVA) measures the contribution to the economy of each individual producer, industry or sector in the United Kingdom. It is the difference between the value of outputs and the value of intermediate consumption, so mainly comprises employment costs and profits.

The Annual Business Survey (ABS) carried out by the Office for National Statistics (ONS) includes statistics on gross value added for different industries, classified using the UK Standard Industrial Classification (SIC 2007). Further information on the ABS is available from the [ONS website](#).

Table 8.3 shows that, in 2016, GVA in primary wood processing (sawmilling, panels and pulp & paper) was reported to be £1.52 billion and GVA in forestry was £0.59 billion.

Source: Annual Business Survey (Office for National Statistics, May 2018)

Notes:

- Categories are based on the [UK Standard Industrial Classification \(SIC 2007\)](#) categories. Further details on the SIC codes used are provided in the Sources: Employment and businesses page.
- The 2013 to 2016 figures for panels have been suppressed in the figures released by ONS, so the figures here cover both panels and the manufacture of assembled parquet floors (SIC 16.22) for those years. Panels accounted for 98% of the total of SIC codes 16.21 (panels) and 16.22 in 2012.
- Excludes other wood-using industries.

8.4 Government expenditure on public forests

Table 8.4 provides information on net expenditure on public forests by the Forestry Commission in Great Britain. This covers expenditure less income for land that is owned or managed by the Forestry Commission. Other expenditure by the Forestry Commission is covered in Table 8.5.

The Forestry Commission's functions in Wales transferred to the Welsh Government and Natural Resources Wales on 1 April 2013. Figures for Wales on a comparable basis are currently unavailable.

Net expenditure on public forests by the Forestry Commission in 2017-18 totalled £40 million. This comprised £24 million in Scotland and £16 million in England.

Recreation, conservation & heritage accounted for £73 million of the total expenditure in 2017-18, harvesting & haulage for £37 million and other expenditure on public forests for £97 million.

Timber sales generated a total income of £111 million in 2017-18. Recreation, conservation & heritage accounted for a further £32 million and other income from public forests for £23 million.

Source: Forestry Commission

Notes:

1. Forestry Commission expenditure only. Excludes expenditure incurred by other departments.
2. Excludes notional cost of capital and any surplus/deficit on sale of properties.
3. Excludes gain on revaluation of biological assets and value of timber felled.
4. Recreation, etc includes conservation and heritage.

8.5 Other government expenditure on forestry

Table 8.5 provides information on other expenditure (excluding public forests) by the Forestry Commission. It includes expenditure by National Offices in England and Scotland as well as expenditure on GB level functions. Figures for Wales on a comparable basis are not currently available. Expenditure on land that is owned or managed by the Forestry Commission is covered in Table 8.4.

In addition to expenditure on public forests, the Forestry Commission spent a total of £92 million on other activities in 2017-18 (Table 8.5).

£58 million was used by the national offices in England and Scotland for grants and partnership funding and a further £12 million for policy, regulation & administration in 2017-18. At a GB level, £25 million was used for international & GB support services and £11 million for research.

Table 8.5 Other government expenditure on forestry^{1,2}

Total	56.3	54.5	43.7	47.6	53.8

Source: Forestry Commission

Notes:

1. Forestry Commission expenditure only. Excludes expenditure incurred by other departments.
2. Excludes miscellaneous income.
3. EU co-financing not subtracted from grant expenditure. In England authority for the Rural Development Programme for England (RDPE) grant scheme rests with Defra.
4. The estimates for GB funded research exclude work by Forest Research funded by external organisations. The increase in "Research - GB funded" and corresponding decrease in "International & GB support services" from 2015-16 to 2016-17 largely reflect organisational change within the Forestry Commission, with the transfer of some functions into Forest Research in April 2016.
5. Country costs for "policy, regulation & administration" include shares of GB support service costs.

8.6 Grant schemes

Private sector woodland in Great Britain is supported by a range of grants for creating new woodland and managing existing woodland. The Woodland Grant Scheme (WGS) was introduced in 1988, at the same time as tax relief was phased out. In Scotland, WGS was replaced by the Scottish Forestry Grant Scheme (SFGS) in 2003, by Rural Development Contracts in 2006 and has now been replaced by the Forestry Grant Scheme. The English Woodland Grant Scheme (EWGS) was launched in July 2005 and has now been replaced by Countryside Stewardship. Better Woodlands for Wales (BWW) was launched in December 2005 and has now been replaced by Glastir (administered by the Welsh Government).

Because of the differences between these schemes, it is increasingly difficult to provide comparable statistics across the three countries. The following tables provide information relating to planting and grants:

- Table 1.14 for total areas of new planting and restocking;
- Table 8.5 for expenditure by the Forestry Commission on grants and partnership funding;
- Table 8.6 (below) for grant expenditure by the Forestry Commission (including grant expenditure managed by the Forestry Commission on behalf of Defra) and by Natural Resources Wales.

Table 8.6 presents information on grant money paid in 2008-09 to 2017-18. A total of £56.1 million was paid in grants in 2017-18, a 3% decrease from the total for the previous year.

At a country level, £37.9 million was paid in grants in Scotland in 2017-18 (an increase of 24% from the previous year), £13.5 million was paid in England (a 43% decrease) and £4.7 million in Wales (an increase of 41%).

Table 8.6 Grant money paid, 2008-09 to 2017-18

	England ¹	Wales ²	Scotland ³	GB
				£ million
2008-09	24.1	3.7	10.9	38.7
2009-10	24.4	2.9	5.7	33.0
2010-11	28.7	3.8	18.9	51.4
2011-12	32.5	5.4	34.2	72.1
2012-13	32.8	5.0	32.3	70.1
2013-14	33.9	4.1	35.5	73.5
2014-15	32.4	1.8	39.2	73.4
2015-16	23.0	3.6	27.5	54.1
2016-17	23.8	3.3	30.5	57.5
2017-18	13.5	4.7	37.9	56.1

Source: Forestry Commission, Welsh Government

Notes:

1. England includes grant scheme expenditure managed by the Forestry Commission on behalf of Defra.

2. Wales relates to grant paid by the Welsh Government.
3. Scotland includes grants paid under the Forestry Grant Scheme and legacy schemes (including Rural Development Contracts).

The total grant money paid in Great Britain has fluctuated over recent years, with levels often dipping around the times that new grant schemes are introduced, followed by a sharp recovery.

Figure 8.3 Grant money paid, 2003-04 to 2017-18

Source: Forestry Commission, Welsh Government

Notes:

1. England includes grant scheme expenditure managed by the Forestry Commission on behalf of Defra.
2. Wales relates to grant paid by the Welsh Government.
3. Scotland includes grants paid under the Forestry Grant Scheme and legacy schemes (including Rural Development Contracts).

Chapter 9: International Forestry

Introduction

This chapter contains information about world forestry, presenting global figures by region alongside data for the UK and the EU. Topics covered include woodland area, carbon stocks, wood removals, production and apparent consumption of wood products and international trade in forest products.

The data are produced by the United Nations Food and Agriculture Organisation (FAO). Further information on the data sources and methodology used to compile the figures is provided in the Sources chapter.

All of the statistics presented in this chapter have been previously released by the FAO. For further details on revisions, see the International Forestry section of the Sources chapter.

Data for the European Union (EU) relate to all 28 current EU members for all of the years shown.

A copy of all International Forestry tables is available to download as an Excel spreadsheet from <https://www.forestresearch.gov.uk/tools-and-resources/statistics/data-downloads/>.

Key findings

The main findings are:

- At around 13% forest cover in 2015, the UK is one of the least densely forested countries in Europe. This compares with 38% for the EU as a whole and 31% worldwide.
- The global forest area reduced by around 3.3 million hectares (0.1%) per year between 2010 and 2015.
- Carbon stocks in forest living biomass have increased in both Europe and North & Central America between 2010 and 2015, but have decreased at a global level.
- A total of 3.8 billion m³ underbark of wood was removed from global forests in 2016, of which around one half (50%) was for use as woodfuel and the remainder was industrial roundwood (for use by wood processors).
- Global production of wood products in 2016 totalled 467 million m³ of sawnwood, 415 million m³ of wood-based panels and 409 million tonnes of paper & paperboard.
- Europe consumed around one quarter (24%) of all sawnwood, around two fifths (19%) of the world's wood-based panels and around one quarter (23%) of all paper and paperboard in 2016.
- The UK was the second largest net importer (imports less exports) of forest products in 2016, with net imports of US \$8.0 billion. The largest net importer was China.

9.1 Forest cover: international comparisons

The FAO Global Forest Resources Assessment (FRA) is a collation of forest data undertaken by the United Nations Food and Agriculture Organisation (FAO) at the global level every five years.

At around 13% forest cover in 2015, the UK is one of the least densely forested countries in Europe (Table 9.1, Figure 9.1). This compares with 38% for the EU as a whole and 31% worldwide.

Table 9.1 Forest cover: international comparisons, 2015

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

9.2 Forest area by country

One fifth of the world's forest area is located in the Russian Federation, with a further 12% in Brazil (Figure 9.2).

Figure 9.2 Forest area by country, 2015

Source: FAO Global Forest Resources Assessment 2015.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

9.3 Annual changes in forest area

The global forest area reduced by around 7.3 million hectares (0.2%) per year between 1990 and 2000, by around 4.0 million hectares (0.1%) per year between 2000 and 2010 and by around 3.3 million hectares (0.1%) per year between 2010 and 2015 (Table 9.2).

The forest area has reduced in most regions since 1990, except for Europe (where the area increased in each time period) and Asia (where the area reduced between 1990 and 2000 but has increased by more between 2000 and 2015).

Table 9.2 Annual changes in forest area by region, 1990-2015

Region	1990-2000		2000-2010		2010-2015

Source: FAO Global Forest Resources Assessment 2015.

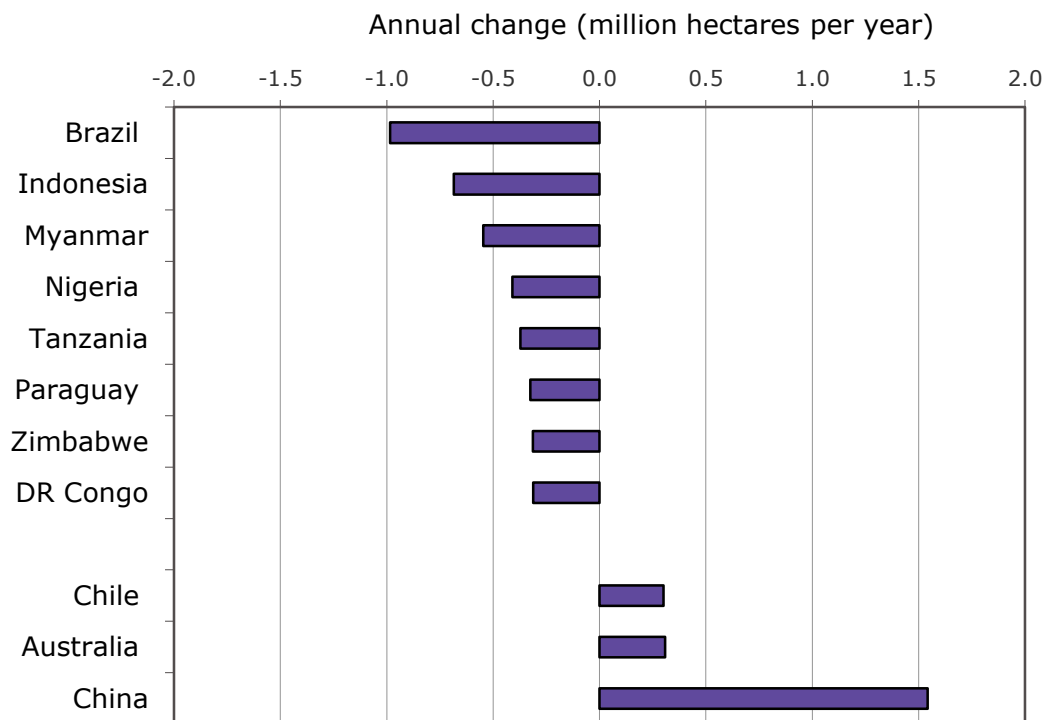

Notes:

1. Cyprus is included in EU-28 total but is part of FAO's Asia region.
2. UK figures for 2015 are 2013-based estimates. Revised estimates (from Chapter 1) suggest that Table 9.2 slightly under-estimates the change in forest area in the UK in the most recent time period.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

Between 2010 and 2015, the largest decrease in forest area was in Brazil (1.0 million hectares per year on average) and the largest increase was in China (1.5 million hectares per year on average) (Figure 9.3).

Figure 9.3 Countries with largest changes in forest area, 2010-2015

Source: FAO Global Forest Resources Assessment 2015.

Notes:

1. Countries with changes of at least 0.3 million hectares per year only.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

9.4 Forest carbon stocks

Carbon stocks in forest living biomass have increased in Europe and North & Central America between 2010 and 2015, but have decreased at a global level, reflecting continuing trends since 1990 (Table 9.3).

The overall decrease has mainly been driven by declines in South America and Africa, where forest areas have decreased. Carbon stocks in biomass also declined slightly in Asia, where carbon sequestered in new plantations is not yet able to balance out carbon losses from areas of deforestation.

Table 9.3 Carbon stocks in forest living biomass by region, 1990-2015

Region	1990	2000	2005	2010	2015
giga tonnes of carbon

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

9.5 Wood removals

A total of 3.8 billion m³ underbark of wood was removed from global forests in 2016, of which around one half (50%) was for use as woodfuel and the remainder was industrial roundwood (for use by wood processors) (Table 9.4).

North & Central America and Europe together accounted for around three fifths (59%) of all industrial roundwood removals in 2016. Globally, removals of industrial roundwood increased by 3% between 2015 and 2016, resulting from increases in all regions except Africa.

Three quarters of woodfuel removals in 2016 took place in Asia and Africa. Globally, removals of woodfuel increased by 1% between 2015 and 2016.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

9.6 Production of wood products

Global production of wood products in 2016 totalled 467 million m³ of sawnwood, 415 million m³ of woodbased panels and 409 million tonnes of paper & paperboard (Table 9.5).

Europe produced around one third (33%) of all sawnwood in 2016 (mainly in EU countries), with around one quarter (28%) produced in North & Central America and a further quarter (28%) in Asia. Overall, sawnwood production increased by 3% between 2015 and 2016, driven by increases in most regions.

Wood-based panels were more commonly produced in Asia, accounting for around three fifths (62%) of global production in 2016. Around one fifth (20%) were produced in Europe (mainly EU countries) and 12% in North & Central America. At a global level, wood-based panel production increased by 4% between 2015 and 2016, mainly driven by a 5% increase in Asia.

Asia also accounted for almost one half (47%) of paper and paperboard production in 2016, with around one quarter (25%) in Europe and a further 22% in North & Central America. Overall, paper and paperboard production in 2016 was similar to the level in 2015.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

9.7 Apparent consumption of wood products

Apparent consumption (defined as production + imports - exports) of wood products around the world totalled 459 million m³ sawnwood, 407 million m³ wood-based panels and 406 million tonnes of paper and paperboard in 2016 (Table 9.6).

Almost two fifths (38%) of all sawnwood in 2016 was consumed in Asia and around one quarter each in Europe (24%) and in North & Central America (27%). Reflecting the increased production of sawnwood (see Table 9.5), apparent consumption of sawnwood increased by 3% overall between 2015 and 2016. This was driven by increases in apparent consumption in most regions.

Asia consumed around three fifths (62%) of the world's wood-based panels in 2016, around one fifth (19%) was consumed in Europe and 14% in North & Central America. Apparent consumption of wood-based panels worldwide increased by 4% between 2015 and 2016, largely resulting from increased demand in Asia and (to a lesser extent) Europe.

Around one half (49%) of all paper and paperboard in 2016 was consumed in Asia, around one quarter (23%) in Europe and a further one fifth (21%) in North & Central America. At a global level, apparent consumption of paper and paperboard increased by 1% between 2015 and 2016.

Table 9.6 Apparent consumption of wood products by region, 1990-2016

Notes:

1. Cyprus is included in EU-28 total but is part of FAO's Asia region.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

9.8 World trade in forest products

Figures 9.6 and 9.7 show the largest net importers and exporters (by value) of forest products in 2016. This covers trade in roundwood, sawnwood, wood-based panels, wood pulp and paper and paperboard. Values are expressed in US dollars.

The UK was the second largest net importer (imports less exports) of forest products in 2016, with net imports of US \$8.0 billion (Figure 9.6). The largest net importer in 2016 was China (US \$27.1 billion).

Figure 9.6 Largest net importers of forest products, 2016

Source: FAO

Notes:

1. Excludes trade in secondary wood products.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

The largest net exporters (exports less imports) of forest products in 2016 were Canada (with net exports valued at US \$17.2 billion), Finland (US \$10.6 billion) and Sweden (US \$10.2 billion) (Figure 9.7).

Figure 9.7 Largest net exporters of forest products, 2016

Notes:

1. Excludes trade in secondary wood products.

These figures are outside the scope of National Statistics. For further information see the Sources chapter.

Chapter 10: Glossary

Ancient woodland

Woodland which has been in continuous existence since 1600 (1750 in Scotland).

Awaiting validation

Status for a Woodland Carbon Code project or group that is undergoing assessment by a certification body.

Bioenergy

Energy from any fuel that is derived from biomass.

Biomass

Material that is derived from living, or recently living, biological organisms.

Biosecurity

A set of precautions that aim to prevent the introduction and spread of harmful organisms. These may be pests, pathogens or invasive species.

Brash

Branch wood and leaf material that is generally too small in diameter to be considered part of the timber product from a harvesting site.

Briquettes

Similar to wood pellets (see below) but larger, briquettes are made from compressed wood fibres and used for heating.

Broadleaves

Trees that do not have needles or cones, such as oak, birch and beech. A few, such as alder, have cone-like structures for their seeds which are not true cones.

Cement bonded particleboard

Sheet material manufactured under pressure, based on wood and other vegetable particles bound with hydraulic cement and possibly containing additives.

Chipboard

(see Particleboard).

Clearfell areas

Sites where all trees have been felled at once. In non-clearfell areas, only some trees are felled at any one time.

Clustering

A sampling technique where the entire population is divided into groups, or clusters, and a random sample of these clusters is selected. All (or a selection of) observations in the selected clusters are included in the sample. Cluster sampling is often used when a random sample would produce a list of subjects so widely scattered that surveying them would prove to be far too expensive.

Confidence interval

An estimated range of values that is likely to include an unknown population parameter (i.e. a fixed value for the population as a whole). The confidence interval around an estimate is derived from the sample data, and is used to indicate the reliability of the estimate.

Confor

Confederation of Forest Industries.

Conifers

Trees with needles and cones, such as spruce, pine and larch.

Conversion factor

Numerical factor by which a quantity that is expressed in one set of units must be multiplied in order to convert it into another set of units.

Coppice

Trees that are cut near ground level (or sometimes higher, in which case they are called pollards), causing them to produce many small shoots. These shoots are harvested every few years at a relatively early age for products such as staves, fencing, fuel and charcoal. "Coppice with standards" includes scattered trees that are left to grow as normal ("standards").

Dead wood

Non-living woody biomass not contained in the litter, either standing or lying on the ground. For wood carbon reporting, the minimum was 15 cm diameter for standing and lying deadwood, and 7 cm dbh (diameter at breast height) for fallen trees.

Defra

Department for Environment, Food and Rural Affairs.

Deliveries

The quantities of UK-grown roundwood that are delivered to processors (mills) or for other uses (such as woodfuel and exports). Note that for sawmills and round fencing mills, the deliveries figure reported is actually the quantity of roundwood consumed by the mill, which may differ from the true deliveries figure if the levels of input stocks vary.

Direct production

Timber that is sold after the trees have been felled by the woodland owner or their contractors.

Establishment

The first five to ten years or formative period that ends once young trees are of sufficient size that, given adequate protection, they are likely to survive at the required stocking.

EU

European Union. It currently comprises 28 member states: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden and the UK.

Eurostat

The statistical office of the European Union, situated in Luxembourg. Its task is to provide the European Union with statistics at European level that enable comparisons between countries and regions.

FAO

United Nations Food and Agriculture Organisation, responsible for the Forest Resources Assessment and for compiling international statistics on production and trade of wood products.

Fibreboard

Panel material with thickness equal to or greater than 1.5mm, manufactured from lignocellulosic fibres with application of heat and/or pressure. The bond is derived either from the felting of the fibres and their inherent adhesive properties or from a synthetic binder added to the fibres.

Forest

In the United Kingdom, there is no formal definition of "forest"; the term is often used for large woodland areas (especially conifers) or for old Royal hunting preserves such as the New Forest or the Forest of Dean.

Forest Service (FS)

The agency of the Northern Ireland Department of Agriculture, Environment and Rural Affairs responsible for forestry matters in Northern Ireland.

Forestry Commission (FC)

The government department responsible for forestry matters in England, Scotland and (until March 2013) Wales. The Forestry Commission's functions in Wales transferred to a new organisation, Natural Resources Wales, on 1 April 2013. The responsibility for forestry is devolved.

FSC

Forest Stewardship Council.

GDP deflator

Gross Domestic Product at market prices deflator. Gross Domestic Product (GDP) is a measure of the total economic activity. Growth in GDP reflects both growth in the economy and price change (inflation). Applying a GDP deflator to time series of prices or price indices removes the effects of inflation to enable a comparison of changes in price that are not caused by inflation.

Great Britain (GB)

England, Wales and Scotland.

Green tonne

The weight measurement of timber freshly felled before any natural or artificial drying has occurred.

Gross Value Added (GVA)

A measure of the contribution to the economy of each individual producer, industry or sector in the United Kingdom.

Growing stock

The volume of timber in living trees. It is also often referred to as the standing volume.

Hardwood

The wood of broadleaved trees, such as oak, birch and beech; a term sometimes used for the broadleaved trees themselves.

HM Revenue & Customs (HMRC)

The United Kingdom's tax authority.

Hectare (ha)

Unit of area defined as 10,000 square metres (100 m by 100 m), approximately equivalent to 2.47 acres.

High forest

Trees capable of growing to be suitable for timber production (compare with coppice).

Increment

The growth rate of standing trees.

Kyoto Protocol

A protocol to the United Nations Framework Convention on Climate Change (UNFCCC) that set binding obligations on the industrialised countries to reduce their emissions of greenhouse gases.

Litter

Non-living biomass with a diameter less than the minimum for dead wood, lying dead in various states of decomposition above the soil.

Long term contracts (LTC)

Sales of roundwood, felled or standing, to customers over a period of more than one year. The second and subsequent years of a long term contract are negotiated after the sale of the first year's volume.

Medium-density fibreboard (MDF)

Wood fibreboard made by a dry process in which the primary bond is derived from a bonding agent, and having a density usually exceeding 600 kg per cubic metre.

Movement Licence

Any movement of Phytophthora-affected wood from a forest site (or subsequent move of affected material from a mill or processing site) requires a Movement Licence to be issued by the Forestry Commission.

Native species

Species that have arrived and inhabited an area naturally, without deliberate assistance by man. For trees and shrubs in the United Kingdom usually taken to mean those present after post-glacial recolonisation and before historic times. Some species are only native in particular regions - hence locally native.

Natural colonisation

The creation of new woodland by natural means, i.e. without sowing or planting.

Natural regeneration

The regeneration of existing woodland by natural means, i.e. without sowing or planting.

Natural Resources Wales (NRW)

The organisation responsible for advising the Welsh Government on the environment, created on 1 April 2013. NRW is responsible for the functions previously carried out by the Environment Agency in Wales, the Countryside Council for Wales and Forestry Commission Wales.

New planting

Establishing woodland on ground that was not woodland in the recent past.

NFI

National Forest Inventory.

NI

Northern Ireland.

NIWT

1995-99 National Inventory of Woodland and Trees.

Nominal terms

Refers to prices at the time of sale. See also "real terms".

ONS

Office for National Statistics.

Oriented strand board (OSB)

Multi-layered board made from strands of wood of a predetermined shape and thickness together with a binder. The strands in the external layers are aligned and parallel to the board length or width.

Oven dry tonnes (ODT)

Measurement of quantity without moisture (i.e. 0% moisture content).

Overbark

The volume of wood including the bark. Can be either standing volume or felled volume.

Particleboard

Panel material manufactured under pressure and heat from particles of wood (wood and chipboard flakes, chips, shavings, sawdust), with the addition of an adhesive.

PAYE

Pay-as-you-earn tax.

Photosynthesis

Chemical process carried out by green plants in the presence of light, which combines carbon dioxide from the atmosphere with hydrogen from water in the soil to form sugars as food for the growing plant. Oxygen is a by-product of the reaction.

Phytophthora ramorum

Fungus-like pathogen of plants that causes extensive damage and mortality to trees (including Japanese larch) and other plants.

Plywood

Wood-based panel consisting of an assembly of layers bonded together with the direction of the grain in adjacent layers, usually at right angles (not currently made in the UK).

Price index

A measure of the proportionate, or percentage, changes in a set of prices over time. Commonly used indices include the Laspeyres index, Paasche index and Fisher index.

Pulp

A fibrous material produced by mechanically or chemically reducing wood into their component parts from which pulp, paper and paperboard sheets are formed after proper slushing and treatment or used for dissolving purposes (dissolving pulp or chemical cellulose) to make rayon, plastics, and other synthetic products. Sometimes called wood pulp.

Quota sampling

A method of sampling where interviewers are each given a fixed number of subjects of specified type to interview.

Real terms

Refers to prices at a common date. Prices in real terms are derived by applying a deflator to remove the effects of general inflation to enable a comparison of changes over time that have not resulted from inflation. See also "nominal terms".

Recovered wood

Either industrial process by-products (e.g. offcuts or fines from a board manufacturing mill, furniture factory, joinery or construction) or from post-consumer waste wood (e.g. pallets, construction waste) after the stage of recovery or reclamation for purposes of recycling.

Restocking

The replacement of trees on areas of woodland that have been felled; this can be done either through replanting or natural regeneration.

Roadside sales

Sales of timber after harvesting. The owner is responsible for getting the trees felled and extracting them to the side of the road, ready to take away.

Roundwood

Trunk or branch wood, generally with a top diameter of 7 cm or more. Can be in the form of logs (14 cm top diameter or more) or small roundwood (7 to 14 cm).

Sawlogs

Material of at least 14 cm top diameter that is destined to be sawn into planks or boards.

Sawmill products

Materials including wood chips, sawdust and bark which arise during the conversion of logs to sawn timber. Most are used as inputs to other wood processing industries, sold for bioenergy or sold for other uses. Formerly called sawmill residues or co-products.

Sawnwood

Sawn timber - timber that has been cut into planks or boards from logs.

Scottish Government (SG)

The executive branch of the devolved government of Scotland.

Scrub

Area of poorly formed trees or bushes unsuitable for conversion to timber.

Semi-natural woodland

Woodland with natural characteristics (predominantly native species of trees, ground plants and animals) where wood production is not a primary objective; this term is used rather than natural because the woodland may have originally been planted or have been managed for wood production in the past.

Short rotation coppice (SRC)

An energy crop, usually consisting of densely planted, high yielding varieties of willow or poplar.

Silviculture

The care and cultivation of forest trees.

Softwood

The wood of coniferous trees, such as spruce, pine and larch; a term sometimes used for the coniferous trees themselves.

Stand

A relatively uniform collection of trees (from either planting or natural regeneration) composed, for example, of a single species or a single age class.

Standing sales

Sales of timber while the trees are still standing. The buyer is responsible for getting the trees felled and removed from the site.

Standing volume

Measurement of quantity before trees are felled. Usually expressed as cubic metres overbark standing.

Statistical significance

A statistical assessment of whether observations reflect an actual pattern rather than just chance.

Statutory Plant Health Notice (SPHN)

Statutory Plant Health Notices, requiring the felling of infected trees, are issued by the Forestry Commission/ Natural Resources Wales/ Forest Service to prevent the spread of pests and diseases. They are currently being issued to control the movement of material infected with *Phytophthora ramorum*.

Stemwood

Wood from the stem and main branches of a tree, excluding the stump and small branches.

Stocked area

Area stocked with living trees. This differs from the woodland area (see below) in that felled areas awaiting restocking and areas of integral open space are generally excluded from the stocked area.

Stratification

A sampling technique where the entire population is divided into groups, or strata, and a random sample is selected within each group. Stratified sampling is often used to ensure that sufficient numbers from each group are included in the overall sample, particularly where results are required for each group.

Stump

The above-ground base part of a tree that would usually remain after felling.

Thinning

A proportion of stems removed in order to give the best stems space and light to grow into a more valuable crop. This is usually carried out some time after canopy closure and may be repeated at intervals. A temporary reduction in standing volume will result.

UKFPA

United Kingdom Forest Products Association.

UN ECE

United Nations Economic Commission for Europe, responsible for compiling international statistics on production and trade of wood products for Europe, the Russian Federation and North America.

Underbark

The volume of wood excluding the bark.

United Kingdom (UK)

Great Britain and Northern Ireland.

Validated

The initial evaluation of a project or group against the requirements of the Woodland Carbon Code. Upon completion a project/ group will receive a 'Validation Opinion Statement'. The project/ group will then be certified for a period of up to five years.

VAT

Value Added Tax.

Veneer

A thin layer of wood, produced by peeling or slicing, used for decorative purposes. Veneers are usually applied to less expensive or less attractive substitutes including solid timber, wood-based sheet materials, etc.

Verified

Verification is the evaluation of a Woodland Carbon Code project as it progresses to confirm the amount of CO₂ sequestered to date as well as that it continues to meet the requirements of the Code.

Weighting

A set of factors assigned to survey responses to ensure that the resulting weighted results are representative of the population as a whole.

Welsh Government

The executive branch of the devolved government of Wales.

Wood pellets

Sawdust or wood shavings compressed into uniform diameter pellets. They are often burned for heat or energy, but may also be used for other purposes (such as horse bedding or cat litter).

Woodland

Land under stands of trees with a canopy cover of at least 20% (25% in Northern Ireland), or having the potential to achieve this, including integral open space, and including felled areas that are due to be restocked. Generally (including the UK) woodland is defined as having a minimum area of 0.5 ha.

Wood Raw Material Equivalent (WRME)

The volume of trees required to produce a wood product. Can be measured underbark or overbark.

Chapter 11: Sources

This chapter provides background information on the statistics presented in this release. It covers the data sources and methodology used to produce the statistics, information on quality measures and on any revisions to historic data and links to further information.

Further details on quality are provided in quality reports for selected topics and for individual surveys, available from our Quality web page at

www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

As a National Statistics output, this publication concentrates on topics for which the data meet National Statistics quality standards. However some topics outside the scope of National Statistics are included, to give a more rounded picture; any such tables are footnoted as "outside the scope of National Statistics". This means that they have not been subject to National Statistics quality assurance procedures, but does not necessarily imply that they are of poorer quality. This edition of Forestry Statistics includes the following tables and charts that are outside the scope of National Statistics:

- Table 1.2: Woodland area in the UK (time series);
- Tables 1.6 to 1.11, figures 1.3 to 1.4b: National Forest Inventory;
- Table 1.15: Felling licences;
- Tables 1.16a and 1.16b: Statutory Plant Health Notices;
- Table 2.4a: Softwood availability forecasts;
- Table 2.4b: Hardwood availability forecasts;
- Table 2.30: Recycled wood used for woodfuel;
- Tables 4.1 to 4.4, Figures 4.2 to 4.3: UK forests and climate change;
- Figure 5.2: Tree health;
- Tables 5.2a and 5.2b: Woodland fires;
- Tables 6.1 to 6.10, Figure 6.1: Recreation;
- Table 8.2, figure 8.2: IPD UK Forestry Index;
- Tables 9.1 to 9.6, Figures 9.1 to 9.7: International forestry.

11.1 Sources: Woodland area and planting

Introduction

The definition of woodland in United Kingdom forestry statistics is land under stands of trees with a canopy cover of at least 20% (or having the potential to achieve this), including integral open space, and including felled areas that are awaiting restocking. There is no minimum height for trees to form a woodland at maturity, so the definition includes woodland scrub but not areas with only shrub species such as gorse or Rhododendron.

In this report, statistics based on the National Forest Inventory (NFI), refer to woods and forests of at least 0.5 hectares, as mapped through the NFI. Previously, figures based on the 1995-99 National Inventory of Woodland and Trees included sample-based estimates for woods and forests between 0.1 hectares and 2.0 hectares in addition to mapped areas of 2.0 hectares or over. Both definitions are slightly different than those used internationally which are based on 10% canopy cover, a minimum height at maturity of 5m and minimum area of 0.5 hectares.

Integral open space is included in woodland area figures derived from the National Forest Inventory if the areas of open space are less than 0.5 hectares; larger areas are mapped out and excluded from the woodland area figures. This differs slightly from the approach used for the National Inventory of Woodland and Trees, where areas of open space of up to 1.0 hectare were included as woodland.

Woodland includes native and non-native trees; semi-natural and plantation areas. Woodland habitat types are not currently differentiated in these statistics.

Most public sector woodland is owned by or managed by the Forestry Commission (FC) in England and Scotland, Natural Resources Wales (NRW) in Wales, or the Forest Service (FS) in Northern Ireland. Woodland owned by local authorities, the Ministry of Defence, non-government organisations including the Woodland Trust and other public sector bodies are included in "private sector woodland".

The Natural Resources Wales woodland areas and land areas shown in this release relate to areas previously owned or managed by Forestry Commission Wales. They exclude any areas previously owned or managed by other parts of Natural Resources Wales, such as the former Environment Agency in Wales and the former Countryside Council for Wales.

The following pages provide more detail on the data sources and methodology used to produce statistics on woodland area and planting. A quality report on Woodland Area, Planting and Restocking is available from our website at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

11.1.1 Sources: Woodland area

Data Sources and Methodology

Woodland Area

Data on woodland area in the UK presented in this release are derived from the following sources:

- Forestry Commission and Natural Resources Wales administrative records of FC/NRW land areas;
- National Forest Inventory (NFI) woodland map (GB);
- Statistics on new planting in Great Britain;
- Northern Ireland Woodland Register;
- Forest Service administrative records of FS woodland areas and
- Forest Service estimates of non-FS woodland area in Northern Ireland.

Estimates of woodland area in Great Britain are based on figures produced from forest inventories. Until recently, forest inventories in Great Britain were undertaken every 15 years or so. The current National Forest Inventory (NFI), unlike previous inventories, is planned to run on a continuous 5-year cycle.

As forest inventories are generally not designed to produce annual figures, a process is required for updating the results on an annual basis to take account of changes in woodland area. The methodology currently used to calculate annual woodland area estimates is described below.

The data processing takes place in Excel. The main outputs are aggregates from the source data, or breakdowns expressed as percentages, and do not require complex data analysis techniques.

- 1.** For Great Britain, woodland area estimates are based on the latest NFI woodland area map of Great Britain available. In this release, woodland area estimates at March 2017 and at March 2018 are both based on the provisional NFI woodland area map at March 2017.
- 2.** The map is overlaid with a map of Forestry Commission and Natural Resources Wales (ex Forestry Commission Wales only) land, to enable a breakdown by ownership to be estimated. This also enables FC/NRW "other land" areas to be derived (Table 1.5). For woodland area estimates at March 2017, FC/NRW legal boundaries at March 2017 are used, and for estimates at March 2018, FC/NRW legal boundaries at March 2018 are used.
- 3.** The woodland area breakdown by type of woodland (conifer or broadleaf) is estimated from the conifer/broadleaf breakdown of **stocked** woodland area, with areas of felled and open space allocated to conifer or broadleaf pro-rata. Estimates for stocked areas at March 2012 derived from NFI interim field survey results are updated to take into account new planting since that date, for which the conifer/broadleaf breakdown is also known. As the area of new planting is much smaller than total woodland area, the effect of this update on the overall conifer/broadleaf breakdown is very small.

The steps above are sufficient to determine woodland area estimates at March 2017, broken down by ownership and conifer/broadleaf.

To obtain estimates at March 2018, two more steps need to be performed, which are described below.

4. Net ownership transfers of woodland between private sector and FC/NRW from March 2017 to March 2018, as inferred by the differences in FC/NRW legal boundaries between those two dates, are broken down by conifer/broadleaf. The breakdown is based on NFI Interpreted Forest Type (IFT) at those dates, derived from photographic interpretation of the NFI woodland map. The "Conifer" and "Mixed mainly conifer" (>80% conifer) IFT categories are assigned to conifers, and the "Broadleaves" and "Mixed mainly broadleaved" (>80% broadleaved) categories are assigned to broadleaves. For the other IFT categories, the conifer/broadleaf breakdown is allocated pro-rata based on the conifer/broadleaf breakdown of woodland area by ownership (private sector or FC/NRW) before transfer.

5. The woodland area figures are then updated to March 2018 by adding areas of new planting in 2017-18, broken down by ownership and type.

Information on previous methodologies can be found in the Methodology Note: Annual Woodland Estimates produced in May 2012, on the Methodology and Outputs web page at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/methodology-and-outputs/.

The methodology and outputs relevant to UK woodland area, planting and restocking were reviewed in 2014. The review report is available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/methodology-and-outputs/.

The provisional 2017 woodland map differs by around 23 thousand hectares (<1%) from the figures for woodland area provided in the NFI report "Tree cover outside woodland in Great Britain", that were based on the NFI 2013 map and the National Tree Map™ (NTM™), the latter in combination with samples of visual aerial photograph interpretation and field sampling outside of areas on the NFI map. The estimates in the tree cover report are higher because they include estimates of woodland area outside the NFI map derived from the other sources. It is intended to publish revised woodland area estimates that will bring these two figures into line by reporting an updated, calibrated NFI woodland area that incorporates these additional areas and uses analysis of the main NFI fieldwork survey to exclude currently mapped areas that are not woodland. Further information on the methodology used by the National Forest Inventory and comparisons of results from the NFI and previous woodland area estimates is available at www.forestresearch.gov.uk/tools-and-resources/national-forest-inventory/.

Figures for Northern Ireland (Forest Service and non-Forest Service woodland) are provided by the Forest Service (<http://www.daera-ni.gov.uk/topics/forestry>). Woodland areas from 2012 provided in this release have been obtained from the NI woodland register.

The NI woodland register is based on a combined dataset derived from fourteen individual datasets from statutory bodies including Forest Service, Land and Property Services, and the Northern Ireland Environment Agency, and non statutory bodies which include Woodland Trust and National Trust. The minimum area of woodland that has been included in the register is 0.1 hectares.

The use of the NI woodland register has resulted in a step change in the non-Forest Service woodland areas reported for Northern Ireland. This should be interpreted as an improvement in the data reported, rather than an actual increase in woodland area.

Further information on administrative sources can be found at:

www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/administrative-sources/.

Certified woodland area

Data on certified woodland areas are obtained from the Forest Stewardship Council (FSC), and contact with individual land owners and managers. Some of the certified woodland has dual certification, i.e. it is certified under both the FSC scheme and the Programme for the Endorsement of Forest Certification (PEFC) scheme.

The data collected from FSC are the areas that are certified for each certificate holder. Follow-up enquiries are then made with larger certificate holders to check the certified areas and to provide a country breakdown.

As all FC/NRW/FS woodlands are certified, the total woodland area (as derived above, from the NFI map and FC boundaries and from Forest Service administrative records) is used, rather than the area provided on the certificates.

Quality

The statistics on woodland area presented here refer to woodland as a land use rather than as a land cover, so felled areas and small areas (less than 0.5 ha) of open space are included within the definition of woodland. Some statistics on woodland area as a land cover are available from other sources (e.g. Countryside Survey 2007, www.countrysidesurvey.org.uk, and associated Land Cover Map; a more recent Land Cover Map 2015 is also available).

Detailed information on the quality of the woodland area statistics presented in this publication is available in the "Quality Report: Woodland Area, Planting and Restocking" at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/. Further quality information on FC Official Statistics is also available from this location.

Revisions

Figures at March 2018 have not been revised since their previous release in "Woodland Area, Planting and Publicly Funded Restocking: 2018 Edition".

Information on revisions made since "Forestry Statistics 2017" are provided in "Woodland Area, Planting and Publicly Funded Restocking: 2018 Edition".

Information on significant revisions to published statistics is provided in the quality report on Woodland Area, Planting and Restocking, available from our Quality web page at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

The Forestry Commission's revisions policy sets out how revisions and errors are dealt with and can be found at www.forestresearch.gov.uk/documents/4355/FCrevisions.pdf.

Further information

Accompanying tables to this release, available at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/woodland-statistics/, provide longer time series data by country for certified woodland.

Figures for woodland area in the UK are provided to international organisations every 4-5 years; to the Food and Agriculture Organisation of the United Nations (FAO) for the "Global Forest Resources Assessment" (www.fao.org/forest-resources-assessment/en/), and to Forest Europe for the "State of Europe's Forests" (<https://foresteurope.org/>).

Figures for woodland area are also used to compile the UK's Greenhouse Gas Inventory for the Land Use, Land Use Change and Forestry (LULUCF) sector, submitted to the United Nations Framework Convention on Climate Change (UNFCCC, <https://unfccc.int/process-and-meetings/transparency-and-reporting/reporting-and-review-under-the-convention/greenhouse-gas-inventories-annex-i-parties/national-inventory-submissions-2018>). Summary factsheets produced by the Department for Business, Energy and Industrial Strategy (previously the Department of Energy and Climate Change), are available at www.gov.uk/government/publications/uk-greenhouse-gas-inventory-summary-factsheets.

Release schedule

Woodland area and certified woodland area data are released twice a year. Provisional figures are published in Woodland Area, Planting and Publicly Funded Restocking (to be renamed Provisional Woodland Statistics from 2019) in early June. Final figures are released in Forestry Statistics at the end of September.

Provisional figures for woodland area and certified woodland area at March 2019 will be published on 13 June 2019 in "Provisional Woodland Statistics: 2019 Edition".

Final results for woodland area and certified woodland area at March 2019 will be published on 26 September 2019 in "Forestry Statistics 2019" and "Forestry Facts & Figures 2019".

11.1.2 Sources: Woodland Inventories

Woodland Inventories

The current National Forest Inventory is the first continuous inventory of British woodlands and is being conducted on a five year cycle. Prior to the National Forest Inventory, a series of one-off woodland inventories took place in Great Britain every 15 years or so.

Most inventories used slightly different definitions of woodland, so some apparent changes in area over time are due to changing definitions. The principal differences for inventories since 1905 are:

- **1905** Felled areas and scrub were not included.
- **1924** Undertaken by questionnaire; woods smaller than 2 acres (0.8 hectares) were not included.
- **1947** Woodlands with an area of less than 5 acres (2 hectares) were not included.
- **1965** Woodlands with an area of less than 1 acre (0.4 hectares) were not included.
- **1980** Woodlands with an area of less than 0.25 hectares were not included.
- **1995-99** Woodlands with an area of 0.1-2 hectares were included on a sample basis; some woodland missing from earlier surveys was included.
- **2010 on** All woodlands with an area of 0.5 hectares or more have been included; all woodlands below 0.5 hectares have been excluded.

Estimates of woodland area prior to 1905 have been obtained from a variety of sources, including:

- Domesday Survey of England - for information in 1086;
- Scottish Woodland History (TC Smout ed, 1997) - for estimate for end Middle Ages in Scotland;
- Roy maps c1750 - for Scotland 17th Century estimate.

National Forest Inventory

In the latest inventory, a digital map based on aerial photography, satellite imagery and other data sources has been produced, from which estimates of total woodland areas have been derived. Data are currently being collected for one hectare sample squares, covering a wide variety of topics, including ownership type, species and age.

Initial results for 2010 were published for countries (Great Britain, England, Wales, Scotland) in Spring 2011. Interim results, based on field survey data combined with information from the NFI map, have since been published on the National Forest Inventory web pages at www.forestresearch.gov.uk/tools-and-resources/national-forest-inventory/.

Further information on administrative sources can be found at:

www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/administrative-sources/

11.1.3 Sources: New planting & restocking

New planting & restocking

Introduction

New planting is the creation of new areas of woodland. Restocking is the replanting of areas of woodland that have been felled. New planting can use planting/seeding or natural colonisation. Restocking can also use planting/seeding or natural regeneration.

Data sources and methodology

Information about Forestry Commission, Natural Resources Wales and Forest Service new planting and restocking comes from administrative systems. Information about other woodland has come principally from grant schemes, including the Countryside Stewardship in England, English Woodland Grant Scheme (EWGS), Glastir in Wales, Better Woodlands for Wales (BWW), Forestry Grant Scheme in Scotland, Rural Development Contracts in Scotland, Scottish Forestry Grant Scheme (SFGS) and Woodland Grant Scheme (WGS).

Areas receiving grant are allocated to years by date of payment. For natural colonisation and regeneration, the areas are generally those for which the second instalment of grant has been paid during the year. The second instalment is approved when woodland reaches a certain stage and density of growth, so this information corresponds approximately to the amount of new and restocked woodland created.

The coverage and level of grant support differ across schemes, so that figures on grant-aided planting are not directly comparable between countries or over time. Grant support for restocking of conifers changed with the introduction of Rural Development Contracts in Scotland in 2008. As a result, grant aid is no longer available for restocking with Sitka spruce in many cases. This will have led to a reduction in areas of private sector restocking that is grant-aided and therefore reported for Scotland.

New planting estimates for England also include areas supported by the Woodland Trust and areas funded by Natural England (High Level Stewardship Scheme/ Countryside Stewardship). From 2016-17, the estimated area of new planting includes new woodland creation supported by the Woodland Trust under the MOREwoods and Partnerships England projects. From 2017-18, the estimated area of new planting also includes new woodland creation supported by the Environment Agency.

Areas of land acquired by the National Forest Company for new planting have been included from 2015-16. To avoid potential double counting, areas of new planting believed to be supported by grant aid or by Woodland Trust have been excluded.

Local estimates for private sector areas of planting and restocking that are not grant aided were included for England, Wales and Scotland up to 2009-10, where possible. Estimates of non-grant aided planting and restocking were relatively small (less than one thousand hectares annually), and it has been assumed that all of this area is broadleaves. No estimates have been included for restocking of Sitka spruce in Scotland, or for restocking in England, that are no longer supported by grants. It is assumed that there is no private sector non-grant aided new planting and restocking in Northern Ireland.

The use of natural regeneration in non-clearfell systems is increasing substantially - particularly for broadleaves in England. These systems are not satisfactorily represented by measuring restocking area within any given year, and so broadleaf planting is likely to be under-reported in this release and other statistics.

Figures for Northern Ireland (Forest Service and private sector woodland) are provided by the Forest Service (www.daera-ni.gov.uk/topics/forestry).

Further information on administrative sources can be found at:

www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/administrative-sources/.

The methodology and outputs relevant to UK woodland area, planting and restocking were reviewed in 2014. The review report is available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/methodology-and-outputs/.

Revisions

Figures for 2017-18 are final; provisional figures were previously released in "Woodland Area, Planting and Publicly Funded Restocking: 2018 Edition".

Figures have not been revised from those provided in "Woodland Area, Planting and Publicly Funded Restocking: 2018 Edition", although a revision has been made to the supporting data, to correct an error in the calculation of total broadleaved new planting + restocking in the longer time series data for England. Information on revisions made since "Forestry Statistics 2017" are provided in "Woodland Area, Planting and Publicly Funded Restocking: 2018 Edition".

Information on significant revisions to published statistics is provided in the quality report on Woodland Area, Planting and Restocking, available from our Quality web page at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

The Forestry Commission's revisions policy sets out how revisions and errors are dealt with and can be found at www.forestresearch.gov.uk/documents/4355/FCrevisions.pdf.

Further information

Accompanying tables to this release, available at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/woodland-statistics/, provide longer time series data by country for new planting and restocking.

Figures for new planting are also used to compile the UK's Greenhouse Gas Inventory for the Land Use, Land Use Change and Forestry (LULUCF) sector, submitted to the United Nations Framework Convention on Climate Change (UNFCCC, <https://unfccc.int/process-and-meetings/transparency-and-reporting/reporting-and-review-under-the-convention/greenhouse-gas-inventories-annex-i-parties/national-inventory-submissions-2018>). Summary factsheets produced by the Department for Business, Energy and Industrial Strategy, BEIS (previously the Department of Energy and Climate Change, DECC), are available at www.gov.uk/government/publications/uk-greenhouse-gas-inventory-summary-factsheets.

Release schedule

New planting and restocking data are released twice a year. Provisional figures are published in Woodland Area, Planting and Publicly Funded Restocking (to be renamed Provisional Woodland Statistics from 2019) in early June. Final figures are released in Forestry Statistics at the end of September.

Provisional figures for new planting and restocking in 2018-19 will be published on 13 June 2019 in "Provisional Woodland Statistics: 2019 Edition".

Final results for new planting and restocking in 2018-19 will be published on 26 September 2019 in "Forestry Statistics 2019" and "Forestry Facts & Figures 2019".

11.1.4 Sources: Felling

Felling

Introduction

Under the Forestry Act 1967, it is illegal to fell trees in Great Britain without prior approval, although there are a few exceptions (for trees below a specified size, dangerous trees, and very small scale felling operations). There is a presumption against removal of woodland and loss of forest cover in the UK, so felling licences issued under the Forestry Act will normally be conditional (where felling approval is granted subject to restocking). However, the permanent removal of trees may be granted (through an unconditional felling licence) for thinning woodland (a standard woodland management practice) or if there are overriding environmental considerations, for example to enable the restoration of important habitats (and consent may be required under the relevant Environmental Impact Assessment Regulations).

The removal of trees may also be authorised under planning regulations, to enable development (including for windfarms). In this case, a felling licence is not required.

The Forestry Commission, Natural Resources Wales and the Forest Service may also require trees to be felled to prevent the spread of pests and diseases, by serving a Statutory Plant Health Notice (SPHN) on the affected site.

Data sources and methodology

Information about felling licences and Statutory Plant Health Notices comes from Forestry Commission, Natural Resources Wales and Forest Service administrative systems.

Data on felling licences relates to felling licences that have been issued. It does not indicate whether the felling has taken place (and if so, when).

Further information on administrative sources can be found at:

www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/administrative-sources/.

Quality

All of the statistics on felling in this chapter are outside the scope of National Statistics.

Revisions

Figures on felling licences and Statutory Plant Health Notices for 2017-18 are released for this first time in this publication.

Figures on Statutory Plant Health Notices in 2012-13 to 2015-16 in England and in Scotland in 2016-17 have been revised from those released in Forestry Statistics 2017. This has resulted in revisions of between -3 and +2 in the number of sites where a Statutory Plant Health Notice has been served.

The Forestry Commission's revisions policy sets out how revisions and errors are dealt with and can be found at www.forestresearch.gov.uk/documents/4355/FCrevisions.pdf.

Further information

Some related figures for England on felling licences have been released. Data on the total area covered by felling licences (conditional and unconditional) were released on 14 June 2018 in "Forestry Commission England Corporate Plan Performance Indicators 2018".

Further information on felling licences (including details of exemptions) is available at:

- England - <https://www.gov.uk/guidance/tree-felling-licence-when-you-need-to-apply>;
- Wales - <http://naturalresources.wales/forestry/tree-felling-and-other-regulations/?lang=en>;
- Scotland - <http://scotland.forestry.gov.uk/supporting/grants-and-regulations/felling-licences>.

A new Case Management System was introduced in Scotland in January 2012. This centralises the data collected on felling licences and provides more information about restocking proposals (including cases where the applicant has agreed to plant an alternative area, does not intend to restock or where open ground is being created) than has previously been gathered.

Further information on tree pests and diseases is available at www.forestry.gov.uk/pestsanddiseases.

Release schedule

Figures on felling licences and Statutory Plant Health Notices in 2018-19 will be published on 26 September 2019 in "Forestry Statistics 2019".

11.2 Sources: Timber

Introduction

This page provides an overview of the sources for the timber statistics presented in Chapter 2; more detailed information is provided on the following pages.

The chapter covers wood production (removals) from UK woodland, and consumption and production by primary wood processors in the UK. The timber statistics presented cover both softwood (wood from coniferous trees such as spruce, pine and larch) and hardwood (wood from non-coniferous trees such as oak, birch and beech). Please refer to the Glossary for an explanation of the terms used.

Quantities of wood can be expressed in different units. Conversion factors can be used to convert between units.

Data sources and methodology

Statistics on timber are obtained from a number of sources. For wood production (removals), data are compiled from:

- Forestry Commission (FC), Natural Resources Wales (NRW) and Forest Service (FS) administrative records of removals from FC/NRW/FS woodlands;
- the Private Sector Softwood Removals Survey for softwood removals from private sector woodlands and
- deliveries of hardwood to wood processing industries (see below) for total hardwood removals.

There is no source of data for hardwood removals from private sector woodlands, so these are estimated to be:

- deliveries of hardwood to wood processing industries (see below) less
- hardwood removals from FC/NRW/FS woodlands.

Timber availability forecasts are obtained from the "50 year forecast of softwood availability" and the "50 year forecast of hardwood availability", released in April 2014 and available at www.forestresearch.gov.uk/tools-and-resources/national-forest-inventory/.

Deliveries are estimated from the following sources:

- the Sawmill Survey;
- the Wood Panel Industries Federation (for wood-based panels);
- the UK Forest Products Association (for integrated pulp and paper mills);
- the Confederation of Paper Industries (for paper production);
- the Survey of Round Fencing Manufacturers;
- the Private Sector Softwood Removals Survey (for softwood deliveries to woodfuel);
- shavings manufacturers;
- companies believed to export roundwood and/or chips.

Estimates are also provided by the Expert Group on Timber and Trade Statistics:

www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/expert-group-on-timber-and-trade-statistics/.

The Methodology note: UK wood production, available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/methodology-and-outputs/ sets out the data analysis methods used to produce annual estimates of UK wood production.

Quality

Detailed information on the quality of the statistics presented in this publication is available in the "Quality Report: UK Wood Production and Trade" at

www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

Further quality information on FC Official Statistics, including separate reports for each of the industry surveys used in this release, is available at:

www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

Revisions

Figures for 2017 and earlier years have been previously published. They are however subject to revisions from those published in "UK Wood Production and Trade: 2017 provisional figures" and previous publications, to reflect late updates to administrative or survey data. Further details on any revisions made are provided in the following pages.

Information on significant revisions to published statistics is provided in the quality report on UK Wood Production and Trade, available from our Quality web page at

www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

The Forestry Commission's revisions policy sets out how revisions and errors to these statistics are dealt with, and can be found at:

www.forestresearch.gov.uk/documents/4355/FCrevisions.pdf.

Further information

Most of these statistics are used to compile data that are sent to international organisations in the Joint Forest Sector Questionnaires, in some cases giving more detail than in this release. These returns are published as Official Statistics on the FC website; provisional figures in May and final figures in September/ October. The statistics are used by Eurostat Forestry Statistics, UNECE Timber Bulletins, and UN/FAO Forest Product Statistics and are published on the FAOSTAT database (<http://faostat3.fao.org>). Summary results from the FAOSTAT database are provided in the International Forestry chapter.

The definitions used in this publication are consistent with the international definitions, as given in the Joint Forest Sector Questionnaire definitions, available at

www.fao.org/forestry/statistics/80572/en/.

The United Nations Economic Commission for Europe (UNECE) Committee on Forests and the Forest Industry (previously the UNECE Timber Committee) also collects, on an annual

basis, estimates for the current year and projections for the following year of wood production, imports and exports. Results are available on the UNECE website (www.unece.org/forests/fpm/timbercommittee.html). Copies of UK returns for the UNECE Timber Forecast Questionnaire are available at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/international-returns/unece-timber-forecast-questionnaire/.

The Department for Business, Energy and Industrial Strategy publishes an annual Digest of UK Energy Statistics (www.gov.uk/government/collections/digest-of-uk-energy-statistics-dukes). Chapter 7 of this digest covers renewable sources of energy including wood. Figures for wood use in renewable energy statistics take into account wood from all sources (including processed wood, recycled wood and imports), not just UK-grown roundwood.

Experimental Statistics

Included in the accompanying spreadsheets for this release of Forestry Statistics are experimental statistics for the destination of UK softwood removals by country in 2017.

For details on the sources and methodology, please refer to Experimental Statistics: UK Softwood Removals and Delivery by Country, 2015-2016, available at www.forestresearch.gov.uk/tools-and-resources/statistics/forestry-statistics/. Since the publication of these experimental statistics, additional questions, within the industry surveys (a source of data for these statistics), were expanded to ask for country breakdowns of specific data, namely, the volume of softwood roundwood sold for bioenergy and roundwood consumed for shavings.

These estimates are under development and continue to be labelled as "experimental statistics".

Release schedule

Provisional figures for 2018 will be released on 16 May 2019 in "UK Wood Production and Trade: 2018 provisional figures".

Final figures for 2018 will be released on 26 September 2019 in "Forestry Statistics 2019" and "Forestry Facts & Figures 2019".

11.2.1 Sources: Wood production

Sources

Figures on UK wood production (or removals) are compiled from a variety of sources:

- Forestry Commission (FC), Natural Resources Wales (NRW) and Forest Service (FS) administrative records - for all removals from FC/NRW/FS woodlands;
- the Private Sector Softwood Removals Survey - for softwood removals from private sector woodlands and
- statistics on deliveries - for total hardwood removals.

The compilation of data on wood production was extended in 2004 to include Northern Ireland.

These sources cover removals of roundwood (trunk and branch wood) only. A survey was introduced in 2009 to collect data on removals of brash (branch wood and leaf material) and stumps (above-ground base part of trees). The collection of stump removals was discontinued in 2012.

The software used to record Forestry Commission sales has included some sales of mixed softwood and hardwood as softwood in previous years.

Further information on administrative sources can be found at:

www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/administrative-sources/.

Methodology

Figures for removals from FC/NRW/FS woodlands are converted from cubic metres (m³) to green tonnes using standard conversion factors. For total softwood figures, the results from the Private Sector Softwood Removals Survey are combined with the data for FC/NRW/FS woodlands to produce total softwood removals.

For hardwood figures, the total hardwood removals are assumed to equal the total hardwood deliveries (obtained from industry surveys and industry associations; see subsequent pages for further information on these sources). Hardwood removals from FC/NRW/FS woodlands are then subtracted to give an estimate of the amount of hardwood removed from private sector woodlands.

Softwood removals methodology change

The methodology used to estimate the quantity of UK softwood removals from private sector woodland was revised for the release of provisional 2011 estimates in "UK Wood Production and Trade: 2011 provisional figures". Details of the change in methodology and its impact on the figures are available in the "Methodology Review of Softwood Removals from Non-FC/FS Woodland" paper, available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/methodology-and-outputs/.

Revisions

Private sector softwood removals are subject to revision annually (see following page, on the Private Sector Softwood Removals Survey). Removals from FC/NRW/FS woodlands are not normally revised. Total hardwood removals (and consequently hardwood removals from private sector woodlands) are subject to annual revisions (see notes on deliveries for further information).

Figures for 2017 are final; provisional figures were previously released in "UK Wood Production and Trade: 2017 provisional figures". Figures for 2013 to 2017 have been revised from those provided in "UK Wood Production and Trade: 2017 provisional figures" to take account of additional returns and quality assurance checks. This has resulted in changes of:

- Wood production (hardwood) – 'Private Sector Woodland' up 31% and 'Total Hardwood' up 27% in 2017. This increase is due to a new estimate for deliveries of UK grown hardwood used for woodfuel and should not be interpreted as an increase in a single year.

Information on revisions made since "Forestry Statistics 2017" are provided in "UK Wood Production and Trade: 2017 provisional figures".

Further information

Figures are published as UK totals. Country breakdowns (England, Wales, Scotland, Northern Ireland) are also published for softwood in table 2.2 for private sector removals and table 2.3 for FC/NRW/FS removals. Approximate country breakdowns are also estimated for hardwood removals.

Longer time series, presenting estimates of FC/NRW/FS and private sector removals by country and by softwood/hardwood are available from the www.forestresearch.gov.uk/tools-and-resources/statistics/data-downloads/ web page.

Release schedule

Provisional figures for 2018 will be released on 16 May 2019 in "UK Wood Production and Trade: 2018 provisional figures".

Final figures for 2018 will be released on 26 September 2019 in "Forestry Statistics 2019" and "Forestry Facts & Figures 2019".

11.2.2 Sources: Private Sector Softwood Removals Survey

Introduction

The Private Sector Softwood Removals Survey is an annual survey conducted by the Forestry Commission (in association with the Forest Service) of a sample of harvesting companies in the UK.

The survey, which previously covered harvesting companies in Great Britain only, was extended in 2004 to include harvesting companies in Northern Ireland. Figures for Northern Ireland in earlier years have therefore been estimated, based on responses to the 2004 survey.

Figures are published as UK totals and by country (England, Wales, Scotland, Northern Ireland).

Data collected

The questionnaire used for the Private Sector Softwood Removals Survey (available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/surveys/private-sector-softwood-removals-survey/) is issued annually to around 40 harvesting companies, to collect information on:

- the quantity of softwood roundwood harvested from private sector woodlands in the UK in the current (latest) year and in the previous year;
- the quantity of softwood roundwood harvested from certified private sector woodlands and
- (from the 2008 survey) the quantity sold to bioenergy (including wood pellet manufacture).
- (from the 2013 survey) the quantity of softwood roundwood harvested as required by plant health legislation.

Response rates

The questionnaire was issued to 40 harvesting companies for the collection of 2017 data, of which 31 responded, giving a response rate of 78%. These respondents are estimated to account for around 95% of all the softwood harvested by companies covered by the survey.

Private Sector Softwood Removals Survey Response Rates, 2008-2017

Year	Forms issued	Responses received	Response rate ¹	Weighted response rate ²
2008	41	35	85%	100%
2009	40	30	75%	92%
2010	40	30	75%	97%
2011	37	26	70%	96%
2012	37	27	73%	95%
2013	40	28	70%	96%
2014	39	30	77%	97%
2015	40	27	68%	94%
2016	40	26	65%	94%
2017	40	31	78%	95%

Notes:

1. Response rates are calculated as the number of responses received divided by the number of forms issued.
2. Weighted response rates have been calculated from the 2008 survey onwards. They are an estimate of the proportion of the softwood harvested by companies covered by the survey that is accounted for by respondents.

Methodology

A review of the methodology used to estimate total private sector softwood removals (including businesses not covered by the survey) was undertaken in 2011-2012.

The "Methodology Review of Softwood Removals from Non-FC/FS Woodland" paper presents the results from this review and the implications of the change in methodology. The paper is available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/methodology-and-outputs/.

In the current methodology, businesses not covered by the survey are assumed to represent 15% of the total softwood removals from private sector woodland. This fixed percentage is applied from 2006 onwards. This figure is currently under review.

Quality

Detailed information on the survey quality is available in the "Quality Report: Private Sector Softwood Removals Survey" at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

Further quality information on FC Official Statistics is available at: www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

Revisions

Results from the Private Sector Softwood Removals Survey may be revised between the provisional figures published in the First Release "UK Wood Production and Trade: provisional figures" and the final data published in "Forestry Facts & Figures" and "Forestry Statistics", to take account of late returns and the results of additional data quality checking procedures.

In order to use the most accurate information possible in estimating total private sector softwood removals, figures for non respondents in earlier years are estimated wherever possible, using their responses in previous and in subsequent years. This may cause the estimates for all previous years to be revised when new data are received from a former non-respondent. This process reduces the potential over-inflation of estimated removals which can be caused by harvesting companies tending to respond when removals have increased but being less likely to do so when their removals have reduced.

Figures for 2017 are final; provisional figures were previously released in "UK Wood Production and Trade: 2017 provisional figures". Figures for 2017 and earlier years have not been revised from those in "UK Wood Production and Trade: 2017 provisional figures". Information on revisions made since "Forestry Statistics 2017" are provided in "UK Wood Production and Trade: 2017 provisional figures".

Release schedule

Provisional figures for 2018 will be released on 16 May 2019 in "UK Wood Production and Trade: 2018 provisional figures".

Final figures for 2018 will be released on 26 September 2019 in "Forestry Statistics 2019" and "Forestry Facts & Figures 2019".

11.2.3 Sources: Sawmill Survey

Introduction

The Sawmill Survey is an annual survey conducted by the Forestry Commission (in association with the Forest Service) of sawmills in the UK that are believed to use UK-grown logs. The survey comprises a short questionnaire (for smaller mills) and a detailed questionnaire (for larger mills).

The survey, which previously covered sawmills in Great Britain only, was extended in 2004 to include sawmills in Northern Ireland. Figures for Northern Ireland in earlier years have therefore been estimated, based on responses to the 2004 survey.

The detailed survey has changed over the years, both in terms of coverage and periodicity.

For 1996 and earlier, detailed questionnaires were issued triennially to mills producing at least 1,000 m³ of sawnwood. From 1998 to 2004, the questionnaires were issued every two years to mills producing at least 5,000 m³ of sawnwood. From 2005, the detailed questionnaires have been issued annually, to mills producing at least 10,000 m³ of sawnwood. From 2016, the threshold for inclusion in the detailed sawmill survey has been raised to annual production of at least 25,000 m³ sawnwood.

Statistics reported for each year are limited to mills that are known to use UK roundwood, but also include any imported logs used by these mills.

Tables for softwood are broken down by country (England, Wales, Scotland, Northern Ireland) and by size of mill. Given the low number of sawmills using UK hardwood, tables for hardwood are presented at a total UK level only.

The number of active mills (those that produced sawnwood in the reporting year) is presented in tables 2.8 to 2.10.

Longer time series, providing data on numbers of mills and on softwood consumption and production are available at www.forestresearch.gov.uk/tools-and-resources/statistics/data-downloads/. The time series data feature breakdowns by size of mill, by country and by region (in England).

Data collected

Two questionnaires are used for the Sawmill Survey:

- a detailed questionnaire goes to around 30 mills that have annual production of at least 25,000 m³ of sawnwood, and
- a short questionnaire is sent to all other mills that are believed to use UK sawlogs (around 140 mills in 2017).

As the threshold for inclusion in the detailed survey was changed for the collection of data since 2016, the results presented here for earlier years have been adjusted to this new threshold to provide a consistent time series.

Both the detailed and the short questionnaires collect information on:

- the consumption of UK and imported logs,
- the production of sawnwood,
- chain of custody certificates and certified timber,
- (from the 2006 survey) sales to bioenergy,
- (from the 2008 survey) sales as firewood and internal use for heat/energy,
- (from the 2010 survey) other products and
- (from the 2008 survey) total employment.

In addition, the detailed questionnaire also collects information on:

- the source of UK logs (England, Wales, Scotland or Northern Ireland),
- sawnwood product markets,
- other products by type and destination and
- sawmill employment by type.

More information on the Sawmill Survey, including copies of the questionnaires sent to businesses in recent years, can be found at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/surveys/sawmill-survey/.

Response rates

Detailed questionnaires were issued to 30 mills for the collection of 2017 data, of which 27 responded, giving a response rate of 90%. For the short questionnaire, 46 responses were received from the 140 forms issued, corresponding to a 33% response rate. This gives an overall response rate of 43%.

Overall, the 73 sawmills responding to the sawmill survey in 2016 are estimated to account for around 86% of total UK sawnwood production.

Sawmill Survey Response Rates (all questionnaires), 2008-2017

Year	Forms issued	Responses received	Response rate ¹	Weighted response rate ²
2008	227	133	59%	90%
2009	219	122	56%	87%
2010	211	93	44%	85%
2011	200	84	42%	82%
2012	196	86	44%	84%
2013	191	83	43%	80%
2014	178	82	46%	84%
2015	179	84	47%	79%
2016	173	74	43%	83%
2017	170	73	43%	86%

Notes:

1. Response rates are calculated as the number of responses received divided by the number of forms issued.
2. Weighted response rates have been calculated from the 2008 survey onwards. They are an estimate of the proportion of total UK sawnwood production that is accounted for by respondents.

Methodology

Each year, figures for non respondents are estimated by rolling forward data from previous years for these mills. For larger mills, these estimates may be modified to take account of advice from the Expert Group on Timber & Trade Statistics.

Time series data for the detailed sawmill survey

From one year to another, some mills may have moved above or below the threshold for inclusion in the detailed sawmill survey. This may affect the trends over time in tables 2.16a to 2.19a.

The total volume of roundwood consumed and sawnwood and other products produced by sawmills covered by the detailed sawmill survey varies over time, so a change in the percentages shown in tables 2.16a to 2.18a does not necessarily reflect a change in volumes.

As a result of the change to the threshold for inclusion in the detailed survey since 2016, results for 2013 to 2015 presented in tables 2.16a to 2.18a have been revised to cover only those mills producing at least 25 thousand m³ sawnwood, for consistency with the data from 2016.

Quality

Detailed information on the survey quality is available in the "Quality Report: Sawmill Survey", available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

Further quality information on FC Official Statistics is available at:

www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

Revisions

Results from the Sawmill Survey may be revised between the provisional figures published in the First Release "UK Wood Production and Trade: provisional figures" and the final data published in "Forestry Facts & Figures" and "Forestry Statistics" to take account of late returns and the results of additional data quality checking procedures.

All the main results (number of mills, consumption, production) are subject to revision annually, as information becomes available about mills opening or closing, or new information becomes available for previous non-respondents. The most common revisions are relatively small downward changes, but this can vary from year to year as special exercises are run to validate the survey population. Information about new mills opening can on occasion cause much larger upward revisions to softwood volumes. Results from the survey of larger mills, which provides more detailed information, may be revised to take account of new information for previous non-respondents.

Figures for 2017 are final; provisional figures were previously released in "UK Wood Production and Trade: 2017 provisional figures". Figures for 2017 and earlier years have not been revised from those in "UK Wood Production and Trade: 2017 provisional figures". Information on revisions made since "Forestry Statistics 2017" are provided in "UK Wood Production and Trade: 2017 provisional figures".

Further information

Figures for UK production of sawn softwood have previously been used alongside data from other sources to assess consumption of sawn softwood in the main end-user markets in the UK. Reports are available at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/timber-statistics/timber-utilisation-statistics/.

Release schedule

Provisional figures for 2018 will be released on 16 May 2019 in "UK Wood Production and Trade: 2018 provisional figures".

Final figures for 2018 will be released on 26 September 2019 in "Forestry Statistics 2019" and "Forestry Facts & Figures 2019".

11.2.4 Sources: Pulp & paper

Introduction

Data on the pulp and paper sector are obtained from two sources:

- The UK Forest Products Association (UKFPA, www.ukfpa.co.uk) provides figures on inputs to the integrated pulp and paper mills and
- the Confederation of Paper Industries (CPI, www.paper.org.uk) provides figures on total UK pulp and paper production.

Integrated pulp and paper mills are paper mills that use UK roundwood to produce pulp (an intermediate product in the production of paper). Inputs for other paper mills are not covered in the input statistics reported. The figures for production cover all UK paper mills.

Figures are available at a total UK level only.

Data collected

The data collected on inputs cover the type of input (roundwood, sawmill products) and the type of wood (softwood, hardwood).

Production data covers wood pulp (mechanical or semi-chemical), recovered fibre pulp and paper & paperboard. Paper & paperboard production are available for the following categories: graphic papers, sanitary & household papers, packaging materials and other paper & paperboard. Data are also collected on UK "production" of waste paper, which is the amount recovered from the UK for re-use in the UK or for export.

From 2008, total employment at integrated pulp and paper mills is also requested, to complement the data collected on this topic from other primary wood processors.

Methodology

The data on inputs to integrated pulp and paper mills are collected by the UKFPA from all such mills in the UK. The number of integrated pulp and paper mills has fallen over recent years and currently stands at 2.

The CPI collects production and raw material data from members and non-members, which accounts for the majority of UK production. The remainder is estimated by CPI using a variety of sources.

Revisions

The statistics on pulp and paper are not normally revised after publication. On occasion, a provisional figure or estimate may be published, and replaced by the actual figure in a subsequent publication.

Figures for 2017 are final; provisional figures were previously released in "UK Wood Production and Trade: 2017 provisional figures".

Figures for 2017 and earlier years have not been revised from those in "UK Wood Production and Trade: 2017 provisional figures". Information on revisions made since "Forestry Statistics 2017" are provided in "UK Wood Production and Trade: 2017 provisional figures".

Release schedule

Provisional figures for 2018 will be released on 16 May 2019 in "UK Wood Production and Trade: 2018 provisional figures".

Final figures for 2018 will be released on 26 September 2019 in "Forestry Statistics 2019" and "Forestry Facts & Figures 2019".

11.2.5 Sources: Wood-based panels

Introduction

Data on the wood-based panel sector are obtained from the Wood Panel Industries Federation (WPIF, www.wpif.org.uk) and cover all wood-based panel mills in the UK.

Statistics reported for each year are available at a UK level only.

Data collected

Data are collected on inputs and on production.

The data collected on inputs covers the type of input (roundwood, sawmill products, imports, recycled wood fibre) and the type of wood (softwood, hardwood).

Production data covers all types of wood-based panels made in the UK, which currently comprises particleboard (including oriented strand board) and fibreboard (medium density fibreboard). UK production of hardboard (another type of fibreboard) ended in the UK in 1999 and production of plywood ended in 2000.

From 2008, total employment is also requested, to complement the data being collected on this topic from other primary wood processors.

Methodology

The data on wood-based panels are collected by the WPIF, which represents all UK wood panel manufacturers. Figures on wood consumption are collected annually. Production data (excluding waste and rejects) are derived from quarterly returns. Response rates in recent years have been 100%.

Revisions

The statistics on wood-based panels are not normally revised after publication. On occasion, a provisional figure or estimate may be published, and replaced by the actual figure in a subsequent publication.

Figures for 2017 are final; provisional figures were previously released in "UK Wood Production and Trade: 2017 provisional figures". Figures for 2017 and earlier years have not been revised from those in "UK Wood Production and Trade: 2017 provisional figures".

Release schedule

Provisional figures for 2018 will be released on 16 May 2019 in "UK Wood Production and Trade: 2018 provisional figures".

Final figures for 2018 will be released on 26 September 2019 in "Forestry Statistics 2019" and "Forestry Facts & Figures 2019".

11.2.6 Sources: Survey of Round Fencing Manufacturers

Introduction

The Survey of Round Fencing Manufacturers is an annual survey conducted by the Forestry Commission (in association with the Forest Service) of round fencing manufacturers (or mills) in the UK that are believed to consume UK-grown roundwood.

The survey, which previously covered mills in Great Britain only, was extended in 2004 to include those in Northern Ireland. Figures for Northern Ireland in earlier years have therefore been estimated, based on responses to the 2004 survey.

Figures are published as UK totals and by size of mill.

Longer time series, providing data on numbers of mills and on softwood consumption are available at www.forestresearch.gov.uk/tools-and-resources/statistics/data-downloads/.

The time series data feature breakdowns by size of mill and by country.

Data collected

The questionnaire used for the Survey of Round Fencing Manufacturers is issued to around 60 mills, to collect information on the consumption of UK-grown and (from 2006) imported roundwood. In 2008, the survey was extended to cover woodfuel quantities (sales to bioenergy, sales as firewood and internal use for heat/ energy) and total employment. In 2010, the survey was further extended to request data on production of round fencing and other products. A breakdown of the country of origin (England, Wales, Scotland, Northern Ireland) for UK-grown roundwood is also requested.

More information on the Survey of Round Fencing Manufacturers, including copies of the questionnaires sent to businesses in recent years, can be found at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/surveys/survey-of-round-fencing-manufacturers/.

Response rates

The questionnaire was issued to 53 mills for the collection of 2017 data, of which 21 responded, giving a response rate of 40%. These respondents accounted for an estimated 36% of roundwood purchased by softwood round fencing manufacturers.

Survey of Round Fencing Manufacturers Response Rates, 2008-2017

Year	Forms issued	Responses received	Response rate ¹	Weighted response rate ²
2008	87	55	63%	88%
2009	82	42	51%	56%
2010	79	34	43%	46%
2011	72	26	36%	58%
2012	68	26	38%	53%
2013	67	27	40%	51%
2014	62	26	42%	42%
2015	60	29	48%	54%
2016	55	23	42%	49%
2017	53	21	40%	36%

Notes:

1. Response rates are calculated as the number of responses received divided by the number of forms issued.
2. Weighted response rates have been calculated from the 2008 survey onwards. They are an estimate of the proportion of total roundwood purchased by softwood round fencing manufacturers that is accounted for by respondents.

Methodology

Each year, figures for non respondents are estimated by rolling forward data from previous years for these mills.

Quality

Detailed information on the survey quality is provided in the "Quality Report: Survey of Round Fencing Manufacturers", available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

Further quality information on FC Official Statistics is available at: www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

Revisions

Results from the Survey of Round Fencing Manufacturers may be revised between the provisional figures published in the First Release "UK Wood Production and Trade: provisional figures" and the final data published in "Forestry Facts & Figures" and "Forestry Statistics" to take account of late returns and the results of additional data quality checking procedures.

All figures are subject to revision annually, as information becomes available about mills opening or closing, or new information becomes available for previous non-respondents. Such revisions are generally quite small.

Figures for 2017 are final; provisional figures were previously released in "UK Wood Production and Trade: 2017 provisional figures". Figures for 2017 and earlier years have

not been revised from those in "UK Wood Production and Trade: 2017 provisional figures". Information on revisions made since "Forestry Statistics 2017" are provided in "UK Wood Production and Trade: 2017 provisional figures".

Release schedule

Provisional figures for 2018 will be released on 16 May 2019 in "UK Wood Production and Trade: 2018 provisional figures".

Final figures for 2018 will be released on 26 September 2019 in "Forestry Statistics 2019" and "Forestry Facts & Figures 2019".

11.2.7 Sources: Other deliveries

Introduction

Data on other deliveries comprise the following:

- shavings - mainly obtained from shavings manufacturers;
- woodfuel - private sector softwood removals survey, woodfuel suppliers and Expert Group on Timber & Trade Statistics estimates;
- hardwood round fencing - Expert Group on Timber & Trade Statistics estimates;
- other miscellaneous products - Expert Group on Timber & Trade Statistics estimates and
- exports of roundwood and chips - companies believed to export roundwood and/or chips, Forest Service (for exports from Northern Ireland) and HM Revenue and Customs.

The figures, which previously covered Great Britain only, were extended in 2004 to include Northern Ireland. Figures for exports prior to 2004 relate to Great Britain only.

Statistics reported for each year are available at a UK level only.

Data collected

The data collected on shavings, woodfuel and other miscellaneous products cover the quantity of roundwood only.

Data collected on exports includes the following categories; industrial roundwood (excluding sawlogs), sawlogs and chips. For 2004 and earlier years, these figures were provided by the UK Forest Products Association (UKFPA, www.ukfpa.co.uk).

Methodology

For shavings, data are collected from the main companies known to produce shavings. In addition, a small estimate is made to cover other shavings manufacturers.

There are currently no reliable sources for data on hardwood round fencing and other miscellaneous products. As a result, estimates (that are rarely changed) are made by the Expert Group on Timber & Trade Statistics to attempt to take account of these other uses of UK roundwood.

The estimate for hardwood used for woodfuel was revised in 2005 to reflect a perceived increase in woodfuel, but this should not be interpreted as an increase in a single year. From 2007, an estimate of roundwood use for biomass energy was included in the woodfuel figures, based on data reported by suppliers and Expert Group on Timber & Trade Statistics estimates. In 2008, the private sector softwood removals survey was extended to ask how much of the removals reported were believed to be for woodfuel use. Estimates of softwood used for woodfuel for recent years are therefore considered to be more reliable than those for earlier years.

For exports, data are requested from companies believed to have exported roundwood or chips in the last year. Forest Service provides data on behalf of companies exporting from Northern Ireland. If required, a small estimate is made for any non respondents or to cover other companies that may have exported roundwood during the year. Exports of hardwood roundwood are estimated from the overseas trade statistics produced by HM Revenue and Customs.

Revisions

Figures for deliveries of softwood for woodfuel may be revised whenever revisions are made to the Private Sector Softwood Removals Survey.

The statistics on other deliveries are not normally revised after publication. On occasion, an estimate may be revised in a subsequent publication, to take account of expert advice on perceived changes in the market for roundwood.

The quality report on UK Wood Production and Trade provides further information, including details of significant revisions to published statistics and is available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

Figures for 2017 are final; provisional figures were previously released in "UK Wood Production and Trade: 2017 provisional figures". Since the publication of provisional figures for 2017, the estimate of UK hardwood deliveries used for 'Woodfuel' has been changed from 400 to 600 (up 50%). This increase reflects a new estimate of the level of hardwood deliveries for woodfuel in 2017 and should not be interpreted as an increase in a single year. This figure is currently under review.

Information on revisions made since "Forestry Statistics 2017" are provided in "UK Wood Production and Trade: 2017 provisional figures".

Release schedule

Provisional figures for 2018 will be released on 16 May 2019 in "UK Wood Production and Trade: 2018 provisional figures".

Final figures for 2018 will be released on 26 September 2019 in "Forestry Statistics 2019" and "Forestry Facts & Figures 2019".

11.2.8 Sources: Comparison of removals and deliveries of UK softwood roundwood

The table below provides a comparison between the figures for removals (obtained from Forestry Commission, Natural Resources Wales, Forest Service and Private Sector Removals Survey) and deliveries (obtained from industry surveys and trade associations) of UK softwood roundwood.

The estimated total for softwood removals in the UK in recent years has been at least 0.3 million green tonnes higher than the estimate for total UK softwood deliveries. At least some of this difference may indicate a possible undercounting of deliveries, particularly for roundwood that is used directly for woodfuel.

Comparison of removals and deliveries of UK softwood roundwood, 2008-2017

Year	FC/NRW/FS removals	Private sector removals	Total removals	Deliveries	Balance ¹
					thousand green tonnes
2008	4 415	3 823	8 238	8 187	51
2009	5 126	3 266	8 392	8 304	88
2010	4 625	4 633	9 258	9 269	-11
2011	4 870	5 186	10 056	9 722	334
2012	4 836	5 259	10 095	9 831	265
2013	5 084	5 852	10 936	10 547	388
2014	4 900	6 627	11 527	10 903	624
2015	4 691	5 968	10 659	10 265	393
2016	5 011	5 734	10 745	10 419	327
2017	4 862	6 053	10 915	10 478	437

Source: Forestry Commission, Natural Resources Wales, Forest Service, industry surveys, industry associations

Notes:

1. The difference between reported removals and deliveries can be caused by variations in the level of stocks between harvesting and delivery to the wood processor, and/or by the differences in data sources and methodologies used to compile removals and deliveries statistics.

The methodology used to estimate the quantity of UK softwood removals from private woodland was revised for the release of provisional 2011 estimates in "UK Wood Production and Trade: 2011 provisional figures". Details of the change in methodology and its impact on the figures are available in the "Methodology Review of Softwood Removals from Non-FC/FS Woodland" paper, available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/methodology-and-outputs/.

11.2.9 Sources: Estimation of hardwood removals from private sector woodlands

Figures for hardwood removals from private sector woodlands are derived from total hardwood deliveries (obtained from industry surveys and trade associations) less hardwood removals from FC/NRW/FS woodlands. The table below provides figures for the last 10 years.

Estimation of hardwood removals from private sector woodlands, 2008-2017

Year	Deliveries	FC/NRW/FS removals	Private sector removals
			thousand green tonnes
2008	431	43	388
2009	536	87	449
2010	535	70	465
2011	541	75	465
2012	534	55	479
2013	532	78	454
2014	537	71	466
2015	564	73	490
2016	597	68	529
2017	738	83	655

Source: Forestry Commission, Natural Resources Wales, Forest Service, industry surveys, industry associations

11.2.10 Sources: Woodfuel and pellets

Introduction

Data on woodfuel have been obtained from the following sources:

- Sawmill survey and survey of round fencing manufacturers;
- Private sector softwood removals survey and woodfuel suppliers;
- Expert Group on Timber & Trade Statistics estimates.

Estimates of the quantity of recycled wood used for woodfuel are produced by the Wood Recyclers' Association (www.woodrecyclers.org).

Data on UK pellet production and feedstock are obtained from the survey of UK pellet and briquette production.

For details on roundwood deliveries for woodfuel, see the Sources: other deliveries page.

Figures are published as UK totals.

Data collected

The sawmill survey and survey of round fencing manufacturers included questions asking for the quantity of woodfuel:

- sold to bioenergy,
- sold as firewood and
- used internally for heat/energy.

All 3 questions have been included in the detailed sawmill survey (sent to larger sawmills annually) for some time. The sawmill survey (for smaller mills) was extended in the 2006 survey to cover quantities sold to bioenergy and again in the 2008 survey to cover firewood sales and use for heat/energy. All three questions were included in the round fencing survey for the first time in 2008.

The survey of UK pellet and briquette production was run for the first time for the collection of 2009 data. The questionnaire asks for data on the total quantity of pellets and briquettes produced, the source of fibres used, the origin of wood used and product markets.

More information on the survey of UK pellet and briquette production, including copies of the questionnaires sent to businesses in recent years, can be found at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/surveys/survey-of-uk-pellet-amp-briquette-production/.

Response rates

Response rates for the sawmill survey and survey of round fencing manufacturers are available on the relevant sources pages.

The 2017 survey of UK pellet and briquette production was sent to a total of 17 companies that were believed to manufacture pellets or briquettes. A total of 4 responded, giving a response rate of 24%. The respondents to the survey are estimated to account for around 56% of the total production of pellets and briquettes in the UK in 2017.

Whilst the low response rates to this survey are of some concern, it is believed that many of the non-respondents are not (currently) producing pellets or briquettes. This is reflected in the much higher weighted response rates and the figures produced are believed to give a reasonable estimate of the true level of UK pellet production.

Survey of UK Pellet & Briquette Production Response Rates, 2010-2017

Year	Forms issued	Response received	Response rate ¹	Weighted Response rate ²
2010	27	12	44%	95%
2011	22	10	45%	92%
2012	21	5	24%	75%
2013	18	8	44%	91%
2014	18	6	33%	91%
2015	18	5	28%	82%
2016	18	5	28%	68%
2017	17	4	24%	56%

Notes:

1. Response rates are calculated as the number of responses received divided by the number of forms issued.
2. Weighted response rates are an estimate of the proportion of total UK pellet and briquette production that is accounted for by respondents.

Methodology

Details of the methodology used for the sawmill survey and survey of round fencing manufacturers are available on the relevant sources pages.

For the survey of UK pellet and briquette production, estimates were made for non-respondents using results from previous surveys (including the 2008 woodfuel suppliers survey) and expert advice.

Quality

Detailed information on the pellet survey quality is available in the "Quality Report: Survey of UK Pellet & Briquette Production", available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

Further quality information on FC Official Statistics is available at:

www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

Revisions

All figures are subject to revision annually, as new information becomes available.

Figures for 2017 are final; provisional figures were previously released in "UK Wood Production and Trade: 2017 provisional figures". Figures for 2017 have been revised from those provided in "UK Wood Production and Trade: 2017 provisional figures" to take account of additional returns and quality assurance checks. This has resulted in an upward revision of 2% to total wood pellet production in 2017.

Further information

Figures for Woodfuel Demand and Usage in Scotland, covering actual and potential use of woodfuel in the commercial, industrial and electrical energy sectors, are produced annually by Forestry Commission Scotland and available at <https://scotland.forestry.gov.uk/supporting/strategy-policy-guidance/climate-change/woodfuel-and-bio-energy>.

The Department for Business, Energy and Industrial Strategy (previously the Department of Energy and Climate Change) publishes an annual Digest of UK Energy Statistics (www.gov.uk/government/collections/digest-of-uk-energy-statistics-dukes). Chapter 7 of this digest covers renewable sources of energy including wood. Figures for wood use in renewable energy statistics take into account wood from all sources (including processed wood, recycled wood and imports), not just UK-grown roundwood.

Release schedule

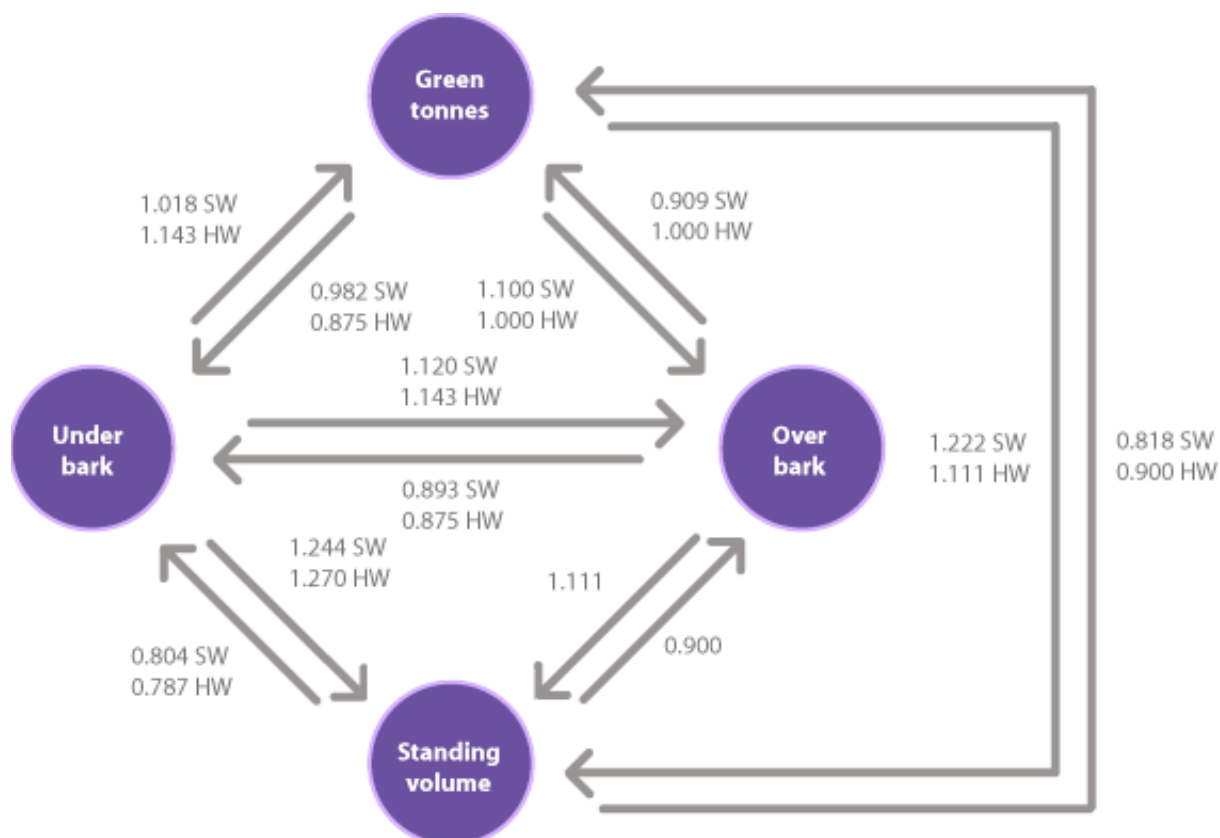

Provisional figures for 2018 will be released on 16 May 2019 in "UK Wood Production and Trade: 2018 provisional figures".

Final figures for 2018 will be released on 26 September 2019 in "Forestry Statistics 2019" and "Forestry Facts & Figures 2019".

11.2.11 Sources: Conversion factors

Conversion factors between cubic metres and green tonnes

The following factors have been used in Chapter 2 (Timber) to convert between cubic metres (m³) and green tonnes:

The diagram shows separate conversion factors to use when converting softwood (SW) and hardwood (HW) with arrows to indicate the direction of conversion. For example, to convert 1,000 green tonnes of SW into an under bark volume, the 1,000 green tonnes should be multiplied by the conversion factor of 0.982 to give 982m³ underbark. There is no difference between the softwood and hardwood conversion factors for converting between standing volume and overbark volumes.

The following factors have been used in Chapter 3 (Trade) to convert between cubic metres (m³) and metric tonnes:

In this case, all the factors are expressed as volumes (in m³) per weight (in tonnes). Therefore, to convert 1,000 tonnes of sawn softwood into a volume, the 1,000 tonnes should be multiplied by 1.82 to give 1,820 m³.

Conversion factors between cubic metres and metric tonnes

Product	m ³ / tonne
Fuelwood, including wood for charcoal	1.38
Wood chips, sawdust, etc	1.48
Industrial roundwood (wood in the rough) - softwood	1.43
Industrial roundwood (wood in the rough) - hardwood	1.25
Sawnwood - softwood	1.82
Sawnwood - hardwood	1.43
Veneer sheets	1.33
Plywood, particleboard	1.54
Hardboard	1.053
MDF (medium density fibreboard)	1.667
Insulating board - density 0.35-0.5 g/cm ³	1.667
Insulating board - other	4.00

The following factors have been used in Chapter 3 (Trade) where required to convert to wood raw material equivalent, which indicates the volume of wood (in m³ underbark) needed to produce one unit of a final product:

Conversion factors to Wood Raw Material Equivalent (wrme) underbark

Product	Measurement unit	Factor to wrme underbark
Fuelwood	tonnes	1.20
Wood charcoal	tonnes	6.00
Chips, sawdust, etc	tonnes	1.20
Industrial roundwood (rough, treated)	m ³	1.10
Industrial roundwood (in the rough)	m ³	1.00
Sleepers	m ³	1.58
Softwood sawnwood	m ³	2.00
Hardwood sawnwood	m ³	2.50
Wastepaper	tonnes	2.80
Mechanical pulp	tonnes	2.50
Chemical dissolving pulp	tonnes	2.50
Sulphate pulp, unbleached	tonnes	6.00
Sulphate pulp, bleached	tonnes	4.50
Sulphite pulp	tonnes	5.00
Semi-chemical woodpulp	tonnes	2.75
Veneer (< 6mm)	tonnes	3.45
Other wood-based panels	tonnes	2.50
Woodwool, woodflour	tonnes	1.70
Packing cases, pallets	tonnes	2.00
Other manufactured wood	tonnes	2.50
Newsprint	tonnes	2.80
Writing & printing paper, uncoated	tonnes	3.50
Other paper & paperboard	tonnes	2.50

Notes:

1. A revised set of figures was produced in FC Technical Paper 19, "Revised Forecasts of the Supply and Demand for Wood in the UK" (Forestry Commission, 1996), but these have not been used in this publication.

11.3 Sources: Trade

Introduction

Statistics on imports and exports are based on the published overseas trade statistics for intra-EU trade and extra-EU trade produced by HM Revenue & Customs (HMRC) and available at www.uktradeinfo.com.

Data on apparent consumption is derived as UK production plus imports less exports.

Data Sources and Methodology

The data obtained from HMRC cover quantities (weights and volumes) and values of wood and wood products imported to and exported from the UK. Data are compiled for the following products:

- roundwood - woodfuel, industrial roundwood;
- wood charcoal;
- wood pellets;
- wood chips, particles and residues;
- sawnwood;
- wood-based panels - veneer sheets, plywood, particleboard, fibreboard;
- pulp - wood pulp, other pulp;
- recovered paper;
- recovered wood;
- paper & paperboard - graphic papers (including newsprint), sanitary & household papers, packaging materials, other paper & paperboard.

For roundwood, sawnwood and wood-based panels, a softwood/hardwood breakdown is available.

The HMRC data are also available by country of origin (for imports) and destination country (for exports).

For consistency with timber deliveries data, roundwood and wood chip exports figures are replaced by those compiled from companies believed to export roundwood and/or chips. For Northern Ireland, figures are provided by the Forest Service. A change in methodology was introduced for this publication, to use HMRC data for hardwood roundwood exports from 2012.

Where the HMRC reporting units for quantity differ from those shown in this publication, figures are adjusted using standard FAO/ECE conversion factors, which are listed in the Timber section of the Sources chapter.

The figures may also be adjusted where an apparent inconsistency in the UK trade figures cannot be resolved before the international return is required.

Historically, HMRC wood trade figures have often necessitated adjustments, following liaison with practitioners in the trade (including the Expert Group on Timber and Trade Statistics, Wood Panel Industries Federation (www.wpif.org.uk) and Confederation of Paper

Industries (www.paper.org.uk). This is partly because detailed intra-EU wood trade data is obtained through a survey of businesses that trade above a particular value threshold. Businesses that trade below this threshold are only required to report the total value of their imports and exports. Therefore the trade data reported in this publication for individual products is based on a potentially biased survey. More information on HMRC statistics can be found at www.uktradeinfo.com/Statistics/Pages/Statistics.aspx.

The "Methodology note: UK wood imports and exports" sets out the data analysis methods used to produce annual estimates of UK wood imports and exports and is available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/methodology-and-outputs/.

Quality

Detailed information on the quality of the trade statistics presented in this publication is provided in the "Quality Report: UK Wood Production and Trade", available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

Further quality information on FC Official Statistics is available at:

www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

Revisions

Statistics on imports and exports are subject to revision after publication if revisions are made to the overseas trade statistics produced by HMRC. Figures may also be refined to take account of expert advice from the Expert Group on Timber & Trade Statistics and trade associations on the trade in specific products.

Figures for 2017 are final; provisional figures were previously released in "UK Wood Production and Trade: 2017 provisional figures". Since the release of 2017 provisional figures, the following revisions have been made:

- Import quantities – sawnwood up 2% in 2016 and 4% in 2017, woodbased panels down 10% in 2017, "other wood" down 7% in 2016 and 32% in 2017;
- Export quantities – sawnwood up 1% in 2016, woodbased panels up 1% in 2017, "other wood" down 1% in 2016 and down 5% in 2017, wood pellets down 2% in 2016, pulp up 3% in 2016 and down 1 % in 2017;
- Import values – sawnwood up 1% in 2016 and in 2017, wood-based panels down 6% in 2017, "other wood" up 7% in 2016 and down 14% in 2017;
- Export values – woodbased panels down 1% in 2017 and "other wood" down 17% in 2016 and down 15% in 2017.

Other revisions to 2016 and 2017 data resulted in changes of no more than 1% magnitude.

Information on revisions made since "Forestry Statistics 2017" are provided in "UK Wood Production and Trade: 2017 provisional figures".

Information on significant revisions to published statistics is provided in the "Quality Report: UK Wood Production and Trade" at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

The Forestry Commission's revisions policy sets out how revisions and errors to these statistics are dealt with, and can be found at:

www.forestresearch.gov.uk/documents/4355/FCrevisions.pdf.

Further information

Most of these statistics are used to compile data that are sent to international organisations in the Joint Forest Sector Questionnaires, in some cases giving more detail than in this release. These returns are published as Official Statistics on the FC website; provisional figures in May and final figures in September/ October. The statistics are used by Eurostat Forestry Statistics, UNECE Timber Bulletins, and UN/FAO Forest Product Statistics and are published on the FAOSTAT database (<http://faostat3.fao.org>).

A summary of the international statistics available from the FAOSTAT website are presented in the chapter on International Forestry. For more information, please refer to the International Forestry section of the Sources chapter.

The definitions used in this publication are consistent with the international definitions, as given in the Joint Forest Sector Questionnaire definitions, available at

www.fao.org/forestry/statistics/80572/en/.

The United Nations Economic Commission for Europe (UNECE) Committee on Forests and the Forest Industry (previously the UNECE Timber Committee) also collects, on an annual basis, estimates for the current year and projections for the following year of wood production, imports and exports. Results are available on the UNECE website (www.unece.org/forests/fpm/timbercommittee.html). Copies of UK returns for the UNECE Timber Forecast Questionnaire are available at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/international-returns/unece-timber-forecast-questionnaire/.

Figures for UK imports and exports of sawn softwood have previously been used alongside data from other sources to assess consumption of sawn softwood in the main end-user markets in the UK. Reports are available at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/timber-statistics/timber-utilisation-statistics/.

Release schedule

Provisional trade figures for 2018 will be released on 16 May 2019 in "UK Wood Production and Trade: 2018 provisional figures".

Final trade figures for 2018 will be released on 26 September 2019 in "Forestry Statistics 2019" and "Forestry Facts & Figures 2019".

11.4 Sources: UK Forests and Climate Change

Introduction

Forests can help mitigate climate change by reducing the amount of greenhouse gases in the atmosphere. They do this by absorbing carbon dioxide, using the carbon to produce sugars for tree growth and releasing the oxygen back into the air. As trees grow, they store carbon in their leaves, twigs and trunk, and in the soil around them.

Globally, deforestation caused by the unsustainable harvesting of timber and the conversion of forests to other land uses accounts for almost 20 per cent of global carbon dioxide emissions. The amount of carbon stored can be increased by actions to reduce the amount of deforestation and to convert non-forested areas to forest. Forests can be managed as a sustainable source of wood – an alternative energy source to fossil fuels, and a low-energy construction material.

Woodlands can also help society adapt to a changing climate, by reducing the risk of flooding, providing shade for wildlife, reducing soil erosion and helping to cool down towns and cities.

Data sources and methodology

Carbon cycle

The diagram showing the carbon cycle is adapted from Figure 3 of Broadmeadow and Matthews (2003).

Forest carbon stock

Table 4.1 is adapted from Table 3e in the final UK report submitted in August 2014 to FAO for the Global Forest Resources Assessment (FRA) 2015 (www.fao.org/forest-resources-assessment/en/).

Units: This table is shown in million tonnes carbon dioxide equivalent (MtCO₂e) rather than million tonnes carbon (MtC). To convert from CO₂e to C multiply by 12/44.

Timescales: Carbon stock is estimated for 1990, 2000, 2005, 2010 and 2015.

Living biomass: Carbon in living biomass is based on data from "NFI report: Carbon in live woodland trees in Britain" (Forestry Commission, May 2014), uprated from GB to UK estimates based on estimated volumes of growing stock. A "root to shoot ratio" (below ground biomass = 0.36 x above ground biomass) is used to estimate the breakdown between above- and below- ground biomass (Levy et al, 2004).

Deadwood: Consistent with Morison et al (2012), estimates of deadwood volume per hectare are taken from Gilbert (2007). These are rated up by woodland area estimates for FRA 2015, assuming a density of 0.45 ODT/m³, and an average carbon content of 50% is applied.

Litter: Estimates of the carbon content of the litter layer are available from Morison et al (2012). These are rated up by woodland area estimates for FRA 2015 to provide a consistent time series.

Soil carbon: Estimates of the carbon content of soil 0-100 cm for England, Wales and Scotland are available from Morison et al (2012). An estimate of the carbon content of soil for Northern Ireland is taken from Bradley et al (2005) and rated downward to reflect the generally lower carbon content found in Morison et al (2012). The soil carbon estimates are then rated up by woodland area estimates for FRA 2015 to provide a consistent time series. This soil estimate does not take account of soil carbon accumulation. This was previously included from estimates made by the Centre for Ecology and Hydrology in "Land Use, Land Use Change and Forestry" (LULUCF) modelling. It also assumes that the soil carbon content of afforested (and previously unwooded) land has the same soil carbon content as woodland soils, whereas in practice this may vary.

Comparison with other data sources: Figures in this updated table are broadly similar to the estimates made in Morison et al (2012).

Future updates: This table will be updated once further information is available from the National Forest Inventory.

Carbon sequestration

The information in Table 4.2 is taken from inventory and projections of UK emissions by sources and removal by sinks due to land use, land use change and forestry, produced by CEH for the National Atmospheric Emissions Inventory (NAEI, <http://naei.beis.gov.uk/>) which incorporates all air pollutants including greenhouse gases.

Figure 4.2 shows annual estimates of carbon accumulation by country, taken from the same source but shows carbon in living forest biomass only; it excludes carbon in litter, soils and forest products. Future predictions of carbon uptake assume that commercial conifer plantations will be replanted when felled, and that planting of new woodland will follow a central projection whereby planting up to 2020 is determined by the available grant for woodland creation (i.e. policy and funding in place), and after that planting rates drop to 10% of the baseline projection, reflecting the lack of funding beyond the current Rural Development Plan.

For more information, please refer to the CEH "Greenhouse Gas Inventories for England, Scotland, Wales and Northern Ireland: 1990 to 2016" (http://naei.beis.gov.uk/reports/reports?report_id=958) and "Projections to 2050 of emissions and removals from the LULUCF sector in Scotland, England, Wales and Northern Ireland" (http://naei.beis.gov.uk/reports/reports?report_id=927). Information on the uncertainty around estimates of greenhouse gas emissions is available in the report "Quantifying Greenhouse Gas Emissions" (Committee on Climate Change, 2017 at <https://www.theccc.org.uk/publication/quantifying-greenhouse-gas-emissions/>).

Emissions and sequestration can be presented as tonnes carbon or tonnes carbon dioxide (CO₂). To convert from tonnes CO₂ to tonnes carbon multiply by 12/44.

Woodland Carbon Code

The Woodland Carbon Code is a voluntary standard, initiated in July 2011, for woodland creation projects that make claims about the carbon they sequester (take out of the atmosphere). All projects must be placed on the UK Woodland Carbon Registry. Their claims about potential carbon sequestration are validated by an independent certification

body. Validated projects are then verified on a regular basis to confirm the progress of carbon sequestration.

Information about Woodland Carbon Code projects comes from the UK Woodland Carbon Registry, housed on the Markit Environmental Registry (www.markit.com/product/registry). The register is a live database and summary data are extracted on a quarterly basis.

Further information on the Woodland Carbon Code is available at: www.forestry.gov.uk/carboncode.

Further information on administrative sources can be found at: www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/administrative-sources/.

Public opinion on climate change

Public Opinion of Forestry Surveys have been run every 2 years by the Forestry Commission. The surveys cover public attitudes to forestry and forestry-related issues. The surveys included up to 2 questions on climate change: one asking about ways in which forests and woodlands can impact on climate change and one asking about how UK forests should be managed in response to the threat of climate change (Table 4.4). Further information on the surveys is available in the Sources: Public Opinion of Forestry page.

Quality

All of the statistics in this chapter are outside the scope of National Statistics, but are included here to give a broad indication of the role of UK forests in climate change.

Revisions

Statistics on UK forests and climate change obtained from others are subject to revision whenever the source data are revised.

The Forestry Commission's revisions policy sets out how revisions and errors to these statistics are dealt with, and can be found at:

www.forestresearch.gov.uk/documents/4355/FCrevisions.pdf.

Release schedule

For information on the release schedules of statistics produced by others, see relevant websites (above).

Woodland Carbon Code Statistics have now moved from a quarterly to an annual release. Data for the year ending March 2018 will be released in "Provisional Woodland Statistics: 2019 Edition" on 13 June 2019.

"Forestry Statistics 2019" and "Forestry Facts & Figures 2019" will be released on 26 September 2019.

The next Public Opinion of Forestry Survey is expected to run in early 2019, with results available in summer 2019.

11.5 Sources: Environment

Introduction

The statistics presented in the Environment chapter of this release cover:

- populations of wild birds;
- public opinion on tree health; and
- woodland fires.

Woodland fires

Wildfires, including woodland fires, are uncontrolled vegetation fires. Although they can start naturally, the majority are caused by people, either accidentally or deliberately.

Wildfires can impact on transport network and power lines; damage property and businesses; affect tourism and recreation; and threaten people's lives. They also damage the natural and historic environment and release carbon dioxide stored in vegetation and soils which contributes to climate change.

Despite woodland wildfires making up a relatively small proportion of all wildfire incidents in the UK, their impacts can be disproportionately large and costly to society. Destructive wildfire events are predicted to increase in frequency in the UK due to increased land-use pressure and climate change.

Data sources and methodology

Populations of wild birds

Population indices for wild birds are a framework indicator for sustainable development. The data published here are based on those published in the Wild bird populations in the UK, 1970-2016 statistical release (Defra, November 2017), rescaled here to give year 2000 = 100 instead of year 1970 = 100.

The index for woodland specialists was recalculated in 2007 to include 4 additional species; this affected the indices for total woodland birds and (to a lesser extent) all birds. A further change in 2015 resulted in the removal of one woodland specialist species from the index. A seabird index was excluded in 2017.

Public opinion on tree health

Public Opinion of Forestry Surveys have been run every 2 years by the Forestry Commission. The surveys cover public attitudes to forestry and forestry-related issues. A question asking about tree health was included for the first time in the 2013 surveys (Figure 5.2). Further information on the surveys is available in the Sources: Public Opinion of Forestry page.

Woodland fires

Information about wildfires comes from the Incident Recording System (IRS), reported by Fire and Rescue Services and submitted to the Home Office (previously to the Department for Communities and Local Government), Scottish Government and Welsh Government.

Information on woodland areas has been obtained from the National Forest Inventory woodland map. Further details on the definition of woodland and the coverage of the National Forest Inventory are provided in the Woodland Area and Planting section of the Sources chapter.

A spatial (GIS) analysis has been undertaken to identify fires that occurred in woodlands, as defined by the National Forest Inventory.

References

Department for Environment, Food and Rural Affairs (2017) "Wild bird populations in the UK, 1970-2016", National Statistics Release (www.gov.uk/government/publications/wild-bird-populations-in-the-uk).

Home Office "Fire Statistics data tables" (www.gov.uk/government/collections/fire-statistics).

Quality

Limited data are currently available on the environmental aspects of woodlands. Other than Wild Bird Populations, all of the statistics in this chapter are outside the scope of National Statistics, but are included here to give a broad indication of the woodland environment.

Revisions

Statistics on the environment obtained from others are subject to revision whenever the source data are revised.

The data on woodland fires in 2015-16 and 2016-17 are released for the first time in this publication. Figures for earlier years have been revised from previous editions of Forestry Statistics to:

- exclude "loose refuse" fires, resulting in a reduction of 2,122 woodland fires in England in 2011-12, 129 fires in Wales in 2013-14 and 122 fires in Wales in 2014-15; and
- include an area of 200 hectares burnt in Wales in 2011-12 that had previously been incorrectly excluded.

The Forestry Commission's revisions policy sets out how revisions and errors to these statistics are dealt with, and can be found at:

www.forestresearch.gov.uk/documents/4355/FCrevisions.pdf.

Release schedule

For information on the release schedules of statistics produced by others, see relevant websites (above).

The next Public Opinion of Forestry survey is expected to run in early 2019, with results available in summer 2019.

"Forestry Statistics 2019" and "Forestry Facts & Figures 2019" will be released on 26 September 2019.

11.6 Sources: Public Opinion of Forestry

Introduction

The Forestry Commission has conducted similar surveys of public attitudes to forestry and forestry-related issues every two years since 1995. Three separate surveys were undertaken in 2017; in Scotland, Wales and across the UK as a whole. A survey for Northern Ireland was most recently carried out in 2014.

Some questions were asked in all of the surveys conducted in 2014/2017 and in the surveys undertaken in earlier years, but an increasing number are survey specific. Questions are asked on a variety of topics including, public awareness of forestry, woodland-based recreation and community involvement, woodfuel and the relationship between forestry and climate change. Tree health was introduced in the 2013/2014 surveys and continued in more recent surveys. Questions on urban trees were introduced in 2017 surveys.

Data Sources and Methodology

The survey results were obtained by placing questions in omnibus surveys run by private market research companies. The four surveys undertaken in 2014/2017 achieved representative samples of:

- 2,113 adults across the UK;
- 1,013 adults across Scotland;
- 1,035 adults across Wales;
- 994 adults across Northern Ireland.

All of the surveys use quota sampling to ensure that the sample selected is representative of the population, and results are weighted to produce estimates for the population as a whole.

Further information on the methodologies used for each survey are provided in the individual survey reports, available at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/public-opinion-of-forestry/.

Quality

All results are subject to the effects of chance in sampling, so a range of uncertainty (confidence interval) is associated with results from the surveys. The confidence intervals take into account the effect of clustering, weighting and stratification in the survey designs. For questions asked to the whole UK sample in 2017 of around 2,100, the range of uncertainty around any result should be no more than $\pm 3.2\%$, while for questions asked to around 1,000 respondents, the corresponding range of uncertainty should be no more than $\pm 4.6\%$.

Revisions

Results from the Public Opinion of Forestry (POF) Surveys were previously released in the separate POF reports for each country. The statistics are not normally revised.

The Forestry Commission's revisions policy sets out how revisions and errors are dealt with and can be found at www.forestryresearch.gov.uk/documents/4355/FCrevisions.pdf.

Further information

Reports for UK and England (using a subset of the UK data set), for Scotland and for Wales were published on 13 July 2017, along with the full sets of data tables.

A report for Northern Ireland was published on 28 August 2014, along with the full set of data tables.

Reports and data tables (including results for previous surveys) are available at www.forestryresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/public-opinion-of-forestry/.

Release schedule

The next Public Opinion of Forestry surveys are expected to run in early 2019, with results available in summer 2019.

11.7 Sources: Recreation

Introduction

There are two main approaches to visitor monitoring:

- General population surveys of individuals at their home. This approach is employed for Scotland's People and Nature Survey, the Welsh Outdoor Recreation Survey, the Monitor of Engagement with the Natural Environment (England) and the Public Opinion of Forestry surveys. (Tables 6.1 to 6.6).
- Surveying and counting of visitors to a specific area or woodland. On-site surveying has been employed for the All Forests surveys. In addition, the Northern Ireland Forest Service keep records of visitors who pay an admission charge to their sites. (Tables 6.7 to 6.8).

There are advantages and disadvantages to each approach, related to factors such as representativeness, feasibility and cost; each approach provides different types of information.

In general, on-site studies provide information on visitor interaction with local or specific woodland areas and include all categories of visitors to a site, regardless of their country of residence and interests.

In contrast, general population studies are limited to residents of a certain country or area, are often carried out by market research companies at a national level, and include people who do not visit woodlands.

Data Sources and Methodology

Household surveys

The information shown in Table 6.1 has been obtained from the following general population household surveys.

- UK Day Visits Surveys (1994, 1996, 1998)
- GB Day Visits Survey (2002/3)
- Scottish Recreation Survey (2004 to 2012)
- England Leisure Visits Survey (2005)
- Welsh Outdoor Recreation Survey (2008, 2011, 2014)
- Monitor of Engagement with the Natural Environment (England 2009/10 onwards)
- Scotland's People and Nature Survey (2013)

The Monitor of Engagement with the Natural Environment has also been used to provide information on visitor characteristics in table 6.2. For further information on this survey, see www.gov.uk/government/collections/monitor-of-engagement-with-the-natural-environment-survey-purpose-and-results.

Estimates of frequency of visits to woodlands in Scotland (Table 6.3) has been produced from Scotland's People and Nature Survey, that ran from March 2013 to February 2014. Scotland's People and Nature Survey replaces the Scottish Recreation Survey.

Further information on both surveys are available at www.snh.gov.uk/land-and-sea/managing-recreation-and-access/increasing-participation/measuring-participation/.

The Welsh Outdoor Recreation Survey also provides statistics on visitor characteristics (Table 6.4). More recently, outdoor recreation has been covered by the National Survey in Wales. Further information on the National Survey, and access to earlier results from the Welsh Outdoor Recreation Survey, are available at:

<https://naturalresources.wales/evidence-and-data/research-and-reports/national-survey-for-wales/?lang=en>.

Public Opinion of Forestry Surveys have been run every 2 years by the Forestry Commission. The surveys cover public attitudes to forestry and forestry-related issues, including visits to woodland (Tables 6.5 to 6.6 and Figure 6.1). Further information is available on the previous page.

On-site surveys

All Forests Surveys were run at a sample of Forestry Commission sites in Scotland from 2004 to 2007 and in 2012-13 (Table 6.7), to provide estimates of the numbers of visits to the National Forest Estate in Scotland. An All Forests Survey was also run in Wales in 2004, but is no longer included in Forestry Statistics. Further information is available at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/recreation-statistics/all-forests-monitoring/. More recent estimates of the number of visitors to the National Forest Estate in Scotland has been produced by Forestry Commission Scotland, updating the All Forests Survey estimates using automatic counters and, for sites without counters, using the results from the 2012-13 All Forests Survey and advice from local managers.

Estimates for numbers of visits to the Public Forest Estate in England are provided in the Forest Enterprise England Natural Capital Accounts, available at <https://www.forestry.gov.uk/forestry/BEEH-APTCAS>.

Statistics on the day visitors to Forest Service sites in Northern Ireland where an admission charge is made is provided by the Forest Service. Further information on the Forest Service is available at <https://www.daera-ni.gov.uk/topics/forestry>.

Public Access to Woodland

Data on public access to woodland are derived from sources belonging to the Woodland Trust:

- The Woods for People project created an inventory of accessible woodland in 2004. Annual updates have been undertaken since and the data available to date are included in Table 6.9.
- The Space for People project analyses information from the Woods for People inventory to produce estimates on the proportion of the population who live close to woods. Full reports have been published, giving data for 2004, 2009, 2012 and 2016. Summary results are in Table 6.10.

Further information is available at www.woodlandtrust.org.uk/.

Quality

It is notable from Table 6.1 that different surveys have provided some quite different estimates of the aggregate number of visits to woodlands. It is likely that differences in survey design and methodology have contributed to a considerable proportion of the differences in results between these surveys. As the scope of the surveys has evolved over time, the figures in Table 6.1 should not be interpreted as time trends but instead as separate results from each survey.

For England and GB, the 2002/3 GBDVS showed a lower number of visits to woodlands than previous surveys. For England, ELVS 2005 showed an even lower total. It is likely that the use of different market research companies and varying approaches and practices (in-home or telephone interview, changed questionnaire structure, etc) are responsible for a substantial proportion of the differences identified in the table. The questionnaire wording for MENE, starting in 2009/10, was intended to prompt the reporting of more of the short local trips, and this has resulted in a substantial increase in the total woodland visits reported.

Table 6.1 also highlights large differences between UK/GBDVS and later surveys in the estimates for Scotland and Wales, with results for both countries dramatically higher in recent years (and despite the Welsh figure being limited to trips with woodland as main destination). It is again likely that this variation is primarily connected with the change in survey scope, design and methodology (UK and GB Day Visit Surveys until 2002/3, Scottish Recreation Survey for 2004 to 2012, Welsh Outdoor Recreation Survey 2008, 2011 and 2014).

A further inconsistency may have occurred between the Scottish Recreation Survey and Scotland's People and Nature Survey, resulting in an apparently large increase in the number of woodland visits between 2012 and 2013. The 2013 estimate uses a new population estimate to gross up the survey results to an estimate of the total number of visits by the population as a whole, and this change has contributed to at least some of the apparent increase.

In common with all sample based surveys, the results from each survey are subject to the effects of chance, depending on the particular survey method used and the sample achieved, thus confidence limits apply to all results from these surveys. For example, the range of uncertainty around the estimated 62 million visits to woodland in Scotland (by Scottish residents) in 2008, should be within +/-14%, i.e. the true figure is likely to be between around 55 and 69 million.

In the Scottish Recreation Survey, the reports produced by TNS calculate the total number of visits for each month based on the average number of visits in a 4-week recall period, scaled up to the number of days in the month, applied to the Scottish adult population. These estimates are then allocated to trip locations using a data set of individual visit-weighted data. In reports produced by TNS and earlier editions of Forestry Statistics, this allocation was done for each quarter using rounded percentages. From Forestry Statistics 2010 the calculation was changed to use annual unrounded weighted data; this should be more accurate and ensures that "main destination" results add across categories.

The Wales 2008 total is not shown explicitly in the initial reports for WORS 2008. It is calculated from the following figures in the tables: 36.028 million visits in 4 weeks x 13

(the number of 4 week periods in a year) x 14% to woodland (where the 14% is derived, unrounded, from 820/6045 in the weighted results).

For England, woodland visits in MENE were identified in the part of the questionnaire that collected details for one visit per respondent. Appropriate visit weights were applied to each record in this data set, and weighted tables were then produced selecting all visits that included woodland.

Technical reports, providing further information on MENE, ScRS and WORS, are available from relevant websites (see above).

Comparison between household and on-site surveys in Scotland

The aggregate visit number estimates for Forestry Commission Scotland woodland obtained from the on-site All Forests Scotland surveys (9.1 million in 2012-13, Table 6.7) is substantially lower than the estimates derived from the Scottish Recreation Survey (around 27 million for 2012, see Forestry Statistics 2013, Table 6.3).

Although it would be unreasonable to expect that two surveys which employ such differing methods would produce consistent estimates, the magnitude of the difference is notable.

The methodology used in the All Forests Surveys is believed to produce a more reliable estimate of the total number of visits annually to Forestry Commission Scotland woodland. It is likely that the estimates derived from the Scottish Recreation Survey may include visits to woodlands owned by others (with respondents reporting "Forestry Commission" as the owner, as this is an organisation that they recognise).

Revisions

Most of the statistics in the Recreation chapter have been previously released in other publications, usually by other organisations. The latest year figures for day visitors to Forest Service sites in Northern Ireland are published for the first time in this release. Figures for earlier years have not been revised from those published in Forestry Statistics 2017.

When originally published by Woodland Trust, Woods for People data for publicly accessible woodland in 2004 included some non-woodland areas. They were revised in 2007, before their first inclusion in Forestry Statistics, to include woodland areas only.

Results for the Scottish Recreation Survey for years up to 2007 (Table 6.1) were amended in 2009 from previously published figures, to incorporate improved weighting procedures.

The Forestry Commission's revisions policy sets out how revisions and errors are dealt with and can be found at www.forestresearch.gov.uk/documents/4355/FCrevisions.pdf.

Further information

Further information on recreation statistics and access to individual survey reports is available from www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/recreation-statistics/.

Release schedule

For information on the release schedules of statistics produced by others, see relevant websites (above).

The next Public Opinion of Forestry survey is expected to run in early 2019, with results available in summer 2019.

"Forestry Statistics 2019" and "Forestry Facts & Figures 2019" will be released on 26 September 2019.

11.8 Sources: Employment and businesses

Introduction

Data sources and methodology

Statistics on employment are obtained from:

- the Annual Business Survey (www.ons.gov.uk/ons/rel/abs/annual-business-survey/index.html), formerly the Annual Business Inquiry, (Office for National Statistics (www.ons.gov.uk)), an annual survey of UK businesses, and
- Industry surveys (Sawmill Survey, Survey of Round Fencing Manufacturers) and industry associations (UK Forest Products Association (www.ukfpa.co.uk), Wood Panel Industries Federation (www.wpif.org.uk)) - for employment in primary wood processing.

Statistics for accidents to employees are obtained from Health & Safety Executive statistics for Great Britain, available at www.hse.gov.uk/statistics.

Numbers of businesses are estimated from:

- Industry surveys (Sawmill Survey, Survey of Round Fencing Manufacturers) and industry associations (UK Forest Products Association, Wood Panel Industries Federation) - for businesses believed to be using UK-grown roundwood, and
- UK Business: Activity, Size and Location (Office for National Statistics) - for VAT and/or PAYE registered businesses (www.ons.gov.uk/ons/rel/bus-register/uk-business/index.html).

Standard Industrial Classification (SIC)

The Annual Business Survey (Annual Business Inquiry prior to 2009), statistics on health and safety and statistics on VAT and/or PAYE registrations classify businesses by UK Standard Industrial Classification (SIC) code. Detailed information on the SIC is available at:

<https://www.ons.gov.uk/methodology/classificationsandstandards/ukstandardindustrialclassificationofeconomicactivities/uksic2007>.

Businesses are classified to SIC codes according to their main activity. The SIC codes are revised periodically to take account of changes in the global economy. The following codes from SIC 2003 and SIC 2007 have been used in this edition of Forestry Statistics:

Standard Industrial Classification

Title	SIC 2003	SIC 2007
Forestry	02 (forestry, logging & related services)	02 (forestry and logging)
Wood products	20 (manufacture of wood and wood products)	16 (manufacture of wood and products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials)
Sawmilling	20.1 (sawmilling and planing of wood, impregnation of wood)	16.1 (sawmilling and planing of wood)
Panels	20.2 (manufacture of veneer sheets, manufacture of plywood, laminboard, particleboard and other panels and boards)	16.21 (manufacture of veneer sheets and wood-based panels);
Secondary products	Other SIC 20 (manufacture of builders' carpentry and joinery, wooden containers, and other products of wood, straw and plaiting materials)	Other SIC 16 (manufacture of assembled parquet floors, other builders' carpentry and joinery, wooden containers, and other products of wood, straw and plaiting materials)
Pulp, paper & paper products	21 (manufacture of pulp, paper and paperboard).	17 (manufacture of paper and paper products)
Pulp & paper	21.1 (manufacture of pulp, paper and paper products)	17.1 (manufacture of pulp, paper and paperboard)
Articles of paper & paperboard	21.2 (manufacture of articles of paper and paperboard)	17.2 (manufacture of articles of paper and paperboard)
Total wood processing	SIC 20 + SIC 21	SIC 16 + SIC 17
Total primary wood processing	SIC 20.1 + SIC 20.2 + SIC 21.1	SIC 16.1 + SIC 16.21 + SIC 17.1

In addition figure 7.1, covering accidents to employees, also uses the following SIC 2003/2007 codes:

- Agriculture etc: 01/01 (agriculture, hunting) + 02/02 (forestry, logging & related services) + 05/03 (fishing, exc sea fishing);
- Manufacturing: 15-37/10-33 (all categories of manufacturing) .

Quality

The forestry and wood processing businesses covered by the Annual Business Survey (Table 7.1), accidents to employees (Table 7.3) and VAT and/or PAYE registered businesses (Table 7.5) differ from those covered by the timber industry surveys and enquiries (Chapter 2, Tables 7.2 and 7.4), as follows:

- Businesses below VAT and PAYE thresholds are excluded from the SIC-based statistics;
- businesses whose main activity is not forestry or wood processing will be allocated to other SIC codes and therefore excluded from the relevant tables on the Annual Business Survey, accidents and VAT and/or PAYE businesses;

- businesses that do not use UK-grown roundwood are excluded from the Forestry Commission's timber industry surveys and enquiries;
- businesses involved in secondary wood processing are excluded from the Forestry Commission's timber industry surveys and enquiries.

Reporting requirements for accidents have changed, with absences of at least 3 days to be reported until March 2012 and absences of at least 7 days to be reported from April 2012. As a result, accident data from 2012-13 are not fully consistent with figures for earlier years.

Revisions

Statistics on employment and businesses obtained from others are subject to revision whenever the source data are revised.

Statistics from timber industry surveys and enquiries are subject to revision whenever the timber statistics are revised (see relevant pages within the Sources chapter for further information on revisions to industry surveys and enquiries). The revisions made to the sawmill survey and the survey of round fencing manufacturers have resulted in:

- Table 7.4: a reduction in the number of sawmills, by 1 from 2010 to 2014 and by 2 in 2016.

The Forestry Commission's revisions policy sets out how revisions and errors to these statistics are dealt with, and can be found at:

www.forestresearch.gov.uk/documents/4355/FCrevisions.pdf.

Further information

For further information, please refer to our Employment statistics page at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/other-topics/employment-statistics/.

Release schedule

For information on the release schedules of statistics produced by others, see relevant websites (above).

"Forestry Statistics 2019" and "Forestry Facts & Figures 2019" will be released on 26 September 2019.

11.9 Sources: Finance & prices

Introduction

The statistics presented in the Finance and Prices chapter of this release cover:

- timber prices;
- financial returns from forestry investment;
- gross value added (GVA);
- government expenditure on forestry; and
- grant schemes.

Figures on financial returns from forestry are produced by another organisation; they are not designated as National Statistics, but are provided to give additional context.

Data Sources and Methodology

Timber Price Indices: Data sources

The Coniferous Standing Sales Price Index and the Softwood Sawlog Price Index are both based on sales of softwood (conifers) by the Forestry Commission and Natural Resources Wales; they do not include any private sector data. They only cover roundwood from woodland; they do not cover sawmill products or other end products.

The Coniferous Standing Sales Price Index (CSSPI) is based on administrative data for standing sales of conifers (softwood) by the Forestry Commission/ Natural Resources Wales. Around 60% of Forestry Commission/ Natural Resources Wales softwood is sold standing, with the purchaser responsible for harvesting. The standing sales cover a full range of sizes, as they include thinning and removal of trees for environmental reasons, as well as harvesting of mature trees. The data used to compile the index covers volumes sold and values by average tree size.

The Softwood Sawlog Price Index (SSPI) is based on administrative data for sales of softwood sawlogs by the Forestry Commission/ Natural Resources Wales. The data used to compile the index covers volumes and values. Direct production by the Forestry Commission/ Natural Resources Wales (where the softwood is sold after harvesting) also covers a range of sizes, but the price statistics reported are limited to sales of logs (over 14 cm diameter).

Both the Coniferous Standing Sales Price Index and the Softwood Sawlog Price Index include sales by long term contract, where the volume of roundwood covered by the contract is sold over a period of more than one year. To take account of changes in price over the term of the contract, price adjustments are made periodically, as part of the contract. The Coniferous Standing Sales Price Index and Softwood Sawlog Price Index include roundwood sales by long term contract but, at present, price adjustments are not included in the indices.

The data for both the Coniferous Standing Sales Price Index and the Softwood Sawlog Price Index are obtained from:

1. the Forestry Commission's Sales Recording Package (SRP). SRP was also used by Natural Resources Wales until February 2017.
2. the timber sales system used by Natural Resources Wales from April 2017 (there were no sales by NRW in March 2017). Sales of softwood sawlogs from April 2017 to March 2018 have been incorporated into the Softwood Sawlog Price Index. As standing sales by size category are not yet available from this system, no figures for Natural Resources Wales from April 2017 have been included in the Coniferous Standing Sales Price Index.

Further information on the administrative data is provided in the Statement of Administrative Sources on the FC Sales Recording Package, available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/administrative-sources/.

Methodology for Coniferous Standing Sales Price Index

The Coniferous Standing Sales Price Index (CSSPI) is an index of the average prices per cubic metre overbark standing achieved for standing sales of conifers by the Forestry Commission/ Natural Resources Wales. It covers all conifer standing sales (open market and negotiated) by the Forestry Commission/ Natural Resources Wales over the twelve month period. All thinning and clearfell data is combined within the index. It includes all species, tree sizes, working practices and conditions. It does not include any private sector data.

The Coniferous Standing Sales Price Index (CSSPI) is calculated using a Fisher index with 5-yearly chain linking. By using a Fisher index to produce the index, distortions in the average price caused by variations in the average tree size over time are corrected. Applying chain linking at regular intervals (in this case, every 5 years) ensures that the index remains relevant over time. Other factors that may affect price (e.g. working conditions, timber quality or species) are not taken into account when constructing the index.

The methodology used to calculate the Coniferous Standing Sales Price Index was reviewed in 2008, with the Fisher index with 5-yearly chain linking introduced from the November 2008 publication of "Timber Price Indices". Further information on the methodology used to calculate the Coniferous Standing Sales Price Index is provided in the paper "Methodology for the Coniferous Standing Sales Price Index", available from the Statistical Methodology and Outputs page of the Forestry Commission website at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/methodology-and-outputs/.

The average prices and the index are expressed in nominal terms (i.e. the actual prices at the time of sale) and in real terms (i.e. the prices converted to 2016). The GDP (Gross Domestic Product at market prices) deflator, produced by the Office for National Statistics (ONS), is applied to the nominal figures to derive real average prices and the index in real terms. The GDP deflator data can be downloaded from the ONS Quarterly National Accounts dataset at www.ons.gov.uk/economy/grossdomesticproductgdp/timeseries/ybgb.

Methodology for Softwood Sawlog Price Index

The Softwood Sawlog Price Index is calculated from data covering separate 6-month periods to September and March. This means that the changes reported are not covering the same periods as the Coniferous Standing Sales Price Index.

The index measures the average price per cubic metre overbark of sawlog sales, with no adjustment for any change in size mix, as it covers a more limited range of sizes than the Coniferous Standing Sales Price Index.

The index was revised in May 2017 to correct a number of inconsistencies in the underlying data. This revised index, covering open market sales only and all lengths of log, was then extended in November 2017 to include sales by negotiation.

The index is expressed in nominal terms (i.e. based on the actual prices at the time of sale) and in real terms (i.e. based on the prices converted to 2016 prices, by removing the effects of general inflation). As for the Coniferous Standing Sales Price Index, the GDP (Gross Domestic Product at market prices) deflator is used to convert from nominal to real terms.

For consistency with the Coniferous Standing Sales Price Index, the Softwood Sawlog Price Index is rebased every 5 years; in this release, the period to September 2016 = 100.

Financial returns

Estimates of financial returns from commercial Sitka spruce plantations are compiled and published by Investment Property Databank Limited (IPD), www.msci.com/www/upd-factsheets/ipd-uk-annual-forestry-index/0163322597. The returns include changes in the value of forestry estates, as well as timber price changes.

Gross Value Added

Gross value added (GVA) measures the contribution to the economy of each individual producer, industry or sector in the United Kingdom.

Statistics on gross value added are obtained from the Annual Business Survey, formerly the Annual Business Inquiry, (Office for National Statistics), an annual survey of UK businesses. Further information on the Annual Business Survey is available at www.ons.gov.uk/surveys/informationforbusinesses/businesssurveys/annualbusinesssurvey

The Annual Business Survey uses the UK Standard Industrial Classification (SIC) to classify businesses to industries according to their main activity. Detailed information on the SIC is available at

<https://www.ons.gov.uk/methodology/classificationsandstandards/ukstandardindustrialclassificationofeconomicactivities/uksic2007>. For further information on the SIC codes used in this release, see the previous page (Sources: Employment and businesses).

Government expenditure

Information about government expenditure on forestry is obtained from administrative records held by the Forestry Commission. Expenditure by the Welsh Government, Natural Resources Wales, Defra and other government departments/ Devolved Administrations is currently excluded.

Further information is available in the Statement of Administrative Sources on FC financial accounts, available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/administrative-sources/. More detailed financial data for the Forestry Commission are published annually in the Annual Report & Accounts produced by National Offices.

Data on grant expenditure are obtained from administrative records for woodland grant schemes across GB. Further information is available in the Statement of Administrative Sources on FC grant schemes data, available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/administrative-sources/.

Quality

The Coniferous Standing Sales Price Index and the Softwood Sawlog Price Index are the only official statistics published for roundwood prices in the UK. So, although they are limited to sales by the Forestry Commission and Natural Resources Wales, they are sometimes used as indicators of price trends for other UK softwood. In recent years, softwood has accounted for more than 90% of all timber harvested in Great Britain, and the Forestry Commission/ Natural Resources Wales has accounted for around 40% to 50% of all softwood sold.

For the Coniferous Standing Sales Price Index, data cover a 12 month period (i.e. data for the year to March and data for the year to September). As these periods overlap, comparisons of values should be made with the same period a year earlier.

Unlike the Coniferous Standing Sales Price Index, the Softwood Sawlog Price Index covers 6 month periods (i.e. data for the period October to March and data for the period April to September), so there is no overlapping.

Detailed information on the quality of the statistics presented in this publication is available in the "Quality Report: Timber Price Indices", available at www.forestresearch.gov.uk/tools-and-resources/statistics/about-our-statistics/code-of-practice/quality-of-official-statistics/.

Revisions

Most of the statistics presented in the Finance & Prices chapter have been previously released. The latest year figures for Government expenditure on forestry are published in this format for the first time in this release.

Timber price indices are unchanged from the figures provided in "Timber Price Indices: data to March 2018". For details of revisions made since Forestry Statistics 2017 see the First Release, available at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/timber-statistics/timber-price-indices/.

Data on financial returns from forestry are not normally revised. Figures for earlier years have been revised from the figures included in "Forestry Statistics 2017" to reflect changes to the historic data released by IPD.

Data on Gross Value Added (GVA) are subject to revision whenever Annual Business Survey data are revised by the Office for National Statistics. Figures for 2015 have been

revised from those shown in "Forestry Statistics 2017" to reflect revisions made to ABS results by ONS.

Data on Government expenditure are not normally revised, but may be subject to revision if revisions are made to the Forestry Commission's financial accounts. Estimates of expenditure on research in 2013-14 to 2016-17 have been revised to exclude expenditure by Forest Research from external income. In addition, the figure for grant expenditure in England in 2016-17 (Table 8.6 and figure 8.3) has been revised up by £1.3m to include payment made in the following year for work undertaken in 2016-17.

The Forestry Commission's revisions policy sets out how revisions and errors are dealt with and can be found at www.forestresearch.gov.uk/documents/4355/FCrevisions.pdf.

Further information

Tables providing longer time series of the Coniferous Standing Sales Price Index and the Softwood Sawlog Price Index and the underlying data used to produce them, are available at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/timber-statistics/timber-price-indices/.

Release schedule

For information on the release schedules of statistics produced by others, see relevant websites (above).

Timber Price Indices are published every six months, in May for data to end March and in November for data to end September. The next editions will be released on the following dates:

"Timber Price Indices: Data to September 2018" will be released on 15 November 2018;

"Timber Price Indices: Data to March 2019" will be released on 16 May 2019.

"Forestry Statistics 2019" and "Forestry Facts & Figures 2019" will be released on 26 September 2019.

11.10 Sources: International Forestry

Introduction

The statistics presented in the International Forestry chapter of this release cover:

- woodland area;
- carbon stocks;
- wood removals;
- production and apparent consumption of wood products; and
- trade in forest products.

Data sources and methodology

International data on forest area and carbon stocks are obtained from the Global Forest Resources Assessment (FRA) 2015 (www.fao.org/forest-resources-assessment/en/), compiled by the United Nations Food and Agriculture Organisation (FAO). The information in Table 9.1 uses forest area from FRA 2015, excluding "other wooded land"; for the UK, this is very similar to the definition of "woodland" used in other tables.

International data on production, imports and exports are obtained from the FAO. Data are collected via the Joint Forest Sector Questionnaire for FAO and other international organisations and published on the FAOSTAT database (<http://faostat3.fao.org/>). Data on apparent consumption is derived as production plus imports less exports.

Data for the European Union (EU) relate to the countries that were EU members at the start of the latest year for which data are available.

Quality

The UK data on forest area and carbon stocks are as submitted by the Forestry Commission to FAO in Spring 2014. More recent estimates of UK woodland area are provided in the Chapter on Woodland Area and Planting. A copy of the full UK return for the Forest Resources Assessment is available at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/international-returns/forest-resources-assessment/.

The UK data on production, imports and exports are as submitted by the Forestry Commission to Eurostat in September 2016. More recent UK estimates are provided in the Chapters on UK-grown Timber and Trade. Copies of all UK returns for the Joint Forest Sector Questionnaire are available at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/international-returns/joint-forest-sector-questionnaire/.

Revisions

International statistics compiled from FRA are subject to revision every five years, when a new collection is undertaken.

International statistics compiled from FAOSTAT may be subject to revision after publication if revisions are made to the data produced by individual countries.

Revisions to historical data have been made in the FAOSTAT database since the publication of "Forestry Statistics 2017" (Tables 9.4 to 9.6). At a global level, such revisions have been relatively minor (no more than 1% difference). There have been larger revisions for some regions, particularly in the wood production estimates for 2015. These include an upward revision of 6% to the figure for woodfuel production in Europe and a downward revision of 6% to the industrial roundwood production estimate for Asia.

The Forestry Commission's revisions policy sets out how revisions and errors to these statistics are dealt with, and can be found at:

www.forestresearch.gov.uk/documents/4355/FCrevisions.pdf.

Further information

Statistics on international forestry are reported here at a regional level. Further data (including figures for individual countries) are also available from the original sources (see above).

Statistics on forest resources are also collected every 4 years at a European level by Forest Europe. The State of Europe's Forests 2015 was released in October 2015 and is available at www.foresteuropa.org/.

The United Nations Economic Commission for Europe (UNECE) Committee on Forests and the Forest Industry (previously the UNECE Timber Committee) also collects, on an annual basis, estimates for the current year and projections for the following year of wood production, imports and exports. Results are available on the UNECE website (www.unece.org/forests/fpm/timbercommittee.html). Copies of UK returns for the UNECE Timber Forecast Questionnaire are available at www.forestresearch.gov.uk/tools-and-resources/statistics/statistics-by-topic/international-returns/unece-timber-forecast-questionnaire/.

Release schedule

For information on the release schedules of statistics produced by others, see relevant websites (above).

International data on wood production and trade in 2017 will be released on 26 September 2019 in "Forestry Statistics 2019" and "Forestry Facts & Figures 2019".
