

## FOREST MANAGEMENT INSTITUTE CZECH REPUBLIC

GOVERNMENT ORGANIZATION ESTABLISHED  
BY THE MINISTRY OF AGRICULTURE  
OF THE CZECH REPUBLIC

## NATIONAL FOREST INVENTORY

**METHOD** of National Forest Inventory (NFI) is based on repeated ground measurements on inventory plots distributed across the area of interest (Czech Republic). It stems from mathematical-statistical methods, which have been used in countries around the world for some time already. For the Czech Republic, it is a breakthrough method of investigation.

**THE CZECH REPUBLIC** is, by means of the Forest Management Institute, a member of the organization European National Forest Inventory Network (ENFIN), which coordinates activities connected with the collection, processing and publishing of information on forest ecosystems and landscape. One of the objectives of this organization is to unify methodological approaches to forest inventories of individual members so that NFI results could be compared in the European context and thus provide an overview of the condition of forests and landscapes in Europe.

**THE CURRENTLY RUNNING SECOND NFI CYCLE** (2011–2015) was approved by the Czech government in the Regulation No. 247/2009 Coll. announcing forest inventory in 2011–2015. This survey follows the first NFI cycle in 2001–2004.

Results of the second NFI cycle will be publicized upon the end of the measurements in 2015.

RESULTS OF THE FIRST NFI CYCLE were published as “National Forest Inventory in the Czech Republic 2001–2004. Introduction, Methods, Results”, which is available also in the electronic form on FMI websites [www.uhul.cz](http://www.uhul.cz).

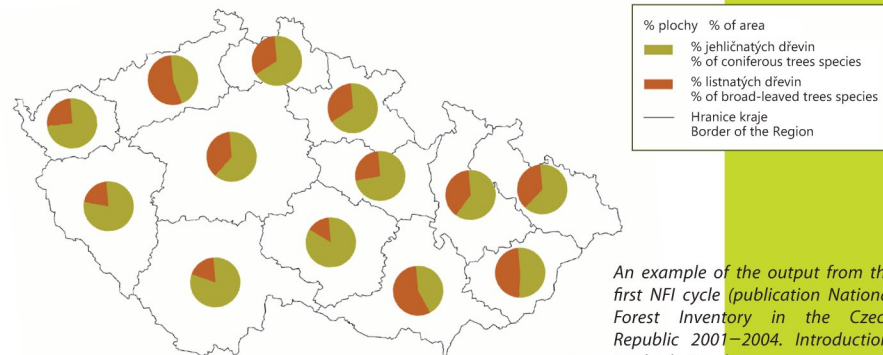

THE NATIONAL FOREST INVENTORY PROJECT is relatively young in the Czech Republic from the historical point of view. It is the first nationwide statistical forest inventory. Nevertheless, from the methodological point of view, the project is very advanced and draws on data from modern concepts of forest inventory methodologies worldwide.

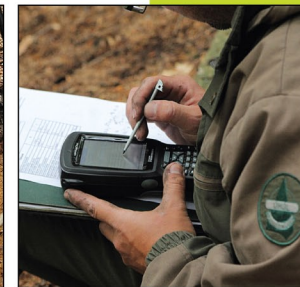

NATIONAL FOREST INVENTORY IS AN INDEPENDENT SURVEY ON THE CONDITION AND DEVELOPMENT OF FORESTS.
